# One page project investment data

## Problem

- No smart systems to optimize waste collection in real time.
- High costs, inefficient fixed routes, no citizen engagement.
- Urgent need to cut CO2 and meet ESG goals.

## Solution

- Telegram Bots System:
  - Citizen Bot: Lets people report trash, track trucks, earn Green Coins.
  - Truck Bot: Guides drivers on optimized stops, logs loads.
  - Manager Bot: Monitors operations, updates routes, communicates with teams.
- Smarter routing, lower costs, happier citizens.

## Technology

- Bots built on Telegram + Django, with routing via VROOM/ORS.
- AI models for waste load predictions, route optimization.
- Langchain AI assistants handle natural chat.

## Business Model

- B2B SaaS for municipalities & contractors.
- Revenue: setup + monthly fees for bots & AI services.
- Scalable to new cities with CO2 & ESG dashboards.

## Ask

**Investment Needed: \$1,200,000 USD**

- **Development: \$500,000 USD** development (bots, AI, routing).
- **Marketing: \$400,000 USD** marketing (city entry)
- **Operational Costs: \$300,000 USD** ops (cloud, AI compute, support)
