Decentralized Personal Agents That Think, Act, and Grow With You

“You’re not uploading your consciousness — you’re growing it beside you.”

Imagine a lifelong digital companion:

An AI agent that learns, acts, and evolves with you.

Not just a tool, but a cognitive extension—your digital twin for the new era.

The Problem

First thing

Digital assistants today are static, siloed, and generic.

Second thing

They don't truly represent your values or protect your interests.

Third thing

In a world of information overload, you need more than automation—you need advocacy.

The Solution

neuronet:

A decentralized network of lifelong personal AI agents (uAgents).
Each agent evolves with its human, learning from daily interactions, preferences, and feedback.

Your agent can:

- Negotiate on your behalf
- Protect your privacy and interests
- Collaborate with other agents
- Grow and adapt as your life changes

Why Now?

LLMs and agent frameworks are ready for real-world use.

Decentralization enables privacy, sovereignty, and trust.

The world is ready for AI that's not just smart—but truly personal.

Why This Is the “Facebook or Tesla” of the AI Age

Facebook

Digital social identity for all

Tesla

Personal autonomy in transport

neuronet

Your digital cognitive twin—
thinking and acting for you in
the economy, web, and governance

MVP – neuronode alpha

Your first personal agent:

- Learns your values (privacy, sustainability, time management)
- Interacts with your calendar and email
- Negotiates meeting times or detects spam
- Stores decisions and feedback for improvement

Welcome to neuronet: your mind, amplified.

Step 1: Let's learn your values.

Please select your top priorities:

[1] Privacy

[2] Sustainability

[3] Time Management

[4] Work-Life Balance

> 1, 3

Values saved: Privacy, Time Management

Step 2: Incoming meeting request from Alice for Friday 3pm.

Checking your calendar and preferences...

You prefer meetings before noon and value your time.

Suggested response:

"Can we do Friday at 10am instead? I prefer mornings."

Sending response to Alice...

Step 3: Checking your email...

1 new message from: spammer@scam.com

Subject: "Congratulations, you've won!"

Based on your preferences and past feedback, this email is flagged as spam and moved to Junk.

Step 4: Feedback time!

Was the meeting suggestion helpful? (y/n): y

Was the spam detection accurate? (y/n): y

Thank you! neuronet| has learned from your feedback and will improve future decisions.

Session complete. neuronet is now more attuned to your needs.
