

Artificial Intelligence

In Medical Diagnosis

**BRAIN GLIOMA DETECTION
THROUGH MRI SCAN USING
CONVOLUTION NEURAL
NETWORKS (CNN)**

Rawan Aseyali & Bashayer Alahmadi

How accurate can Radiologists identify the brain tumors?

Sometimes it cuz a headache

Lack of
experience

Long time

Problems

Small size

Difficult
location

Radiology

Detection

RadDet

The eye of Radiologists

Table of contents

1- Why & What?

2- Software Analysis

3- Demo

4- Possible customer

5- Business plan

6- Limitations & Next step

1 - Why & What?

Why?

Lack of
experience

RadDet

Difficult
location

Small size

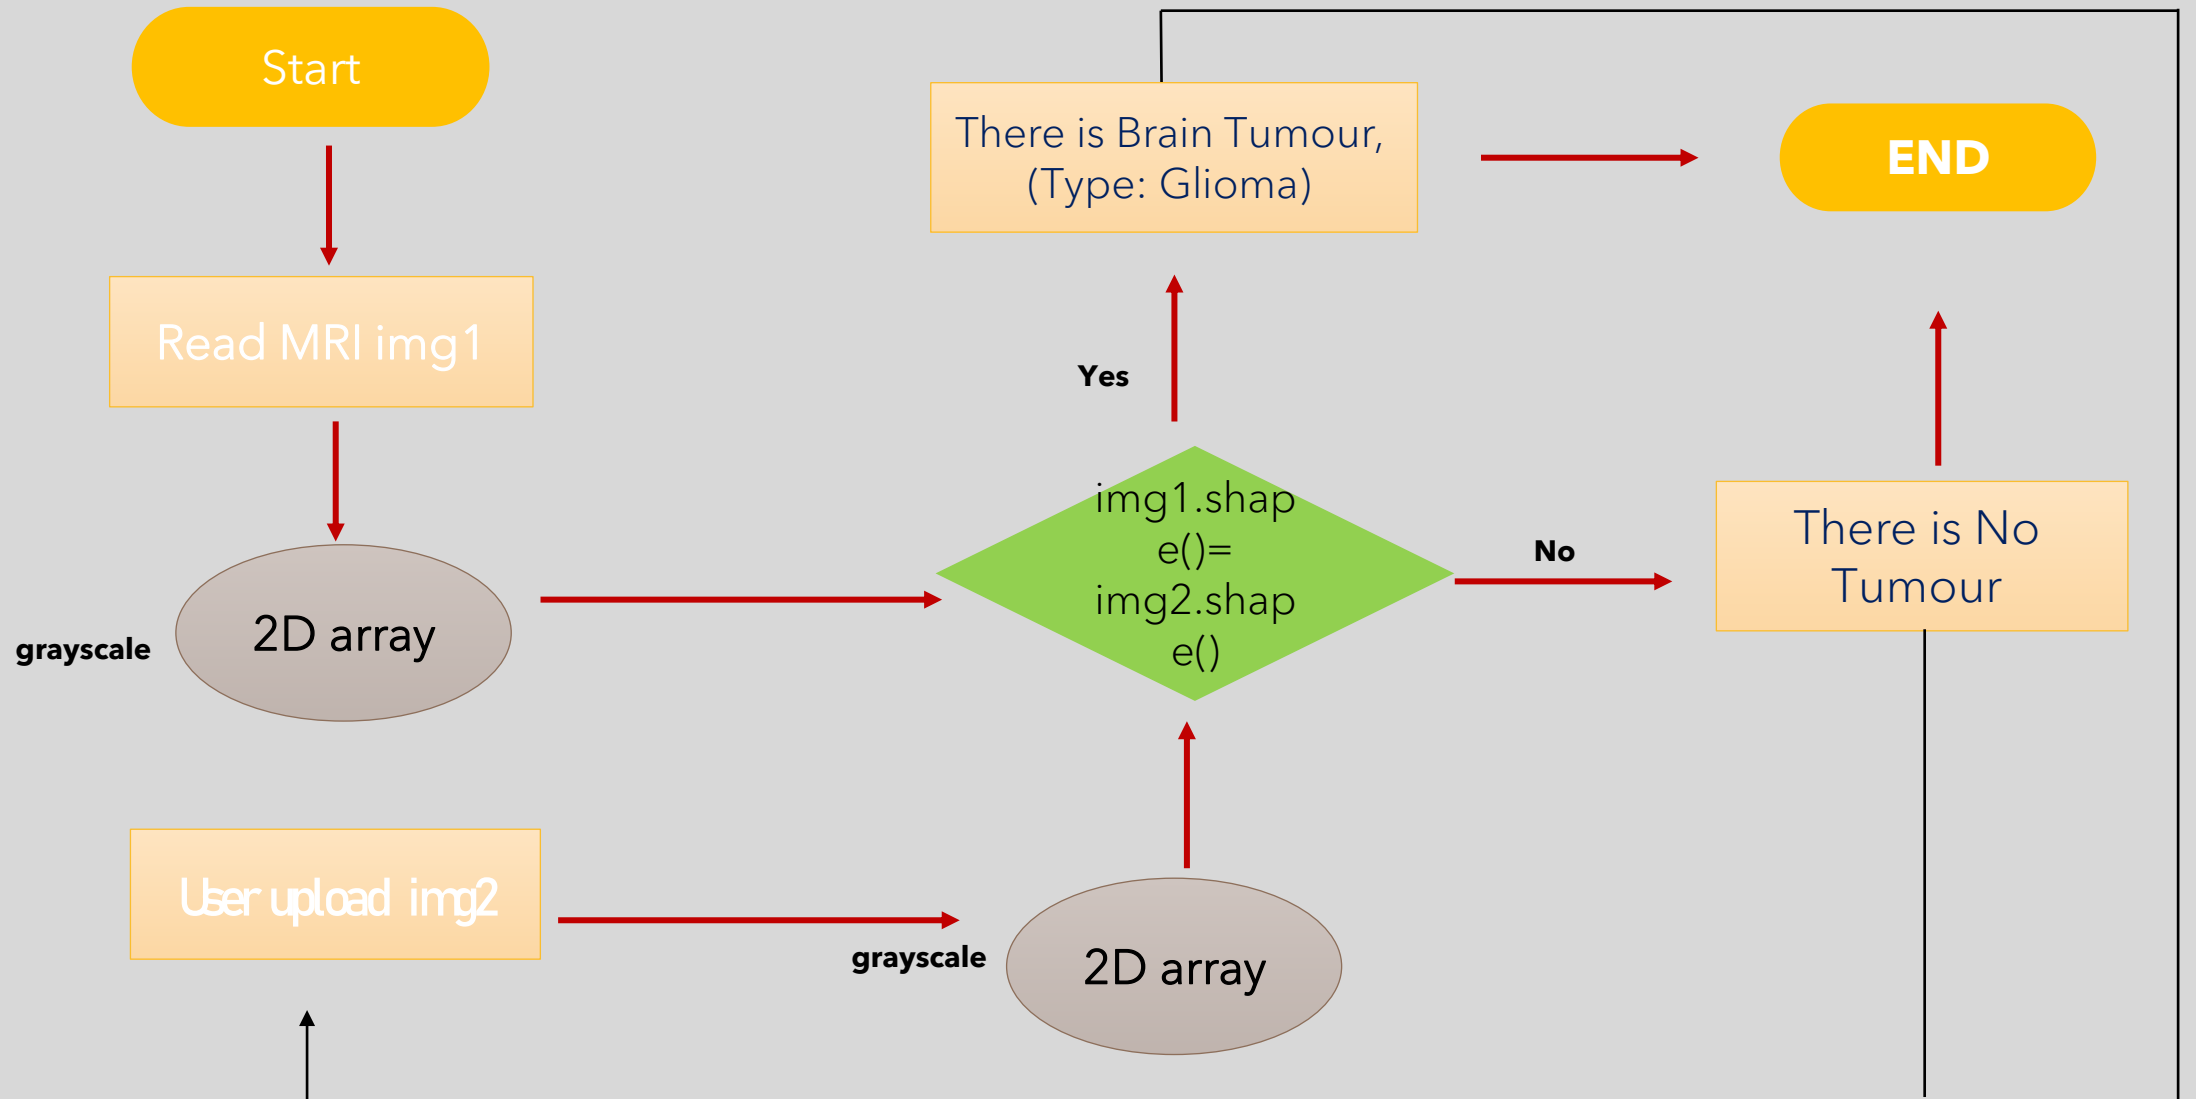

What RadDet?

- ❖ Building an artificial intelligence **software** tool by using python codes (CNN).
- ❖ The tool aim to detect brain tumors called gliomas through the MRI images by using specific MRI sequences (FLIAR/ T2 / Diffusion weighted imaging “DWI”).

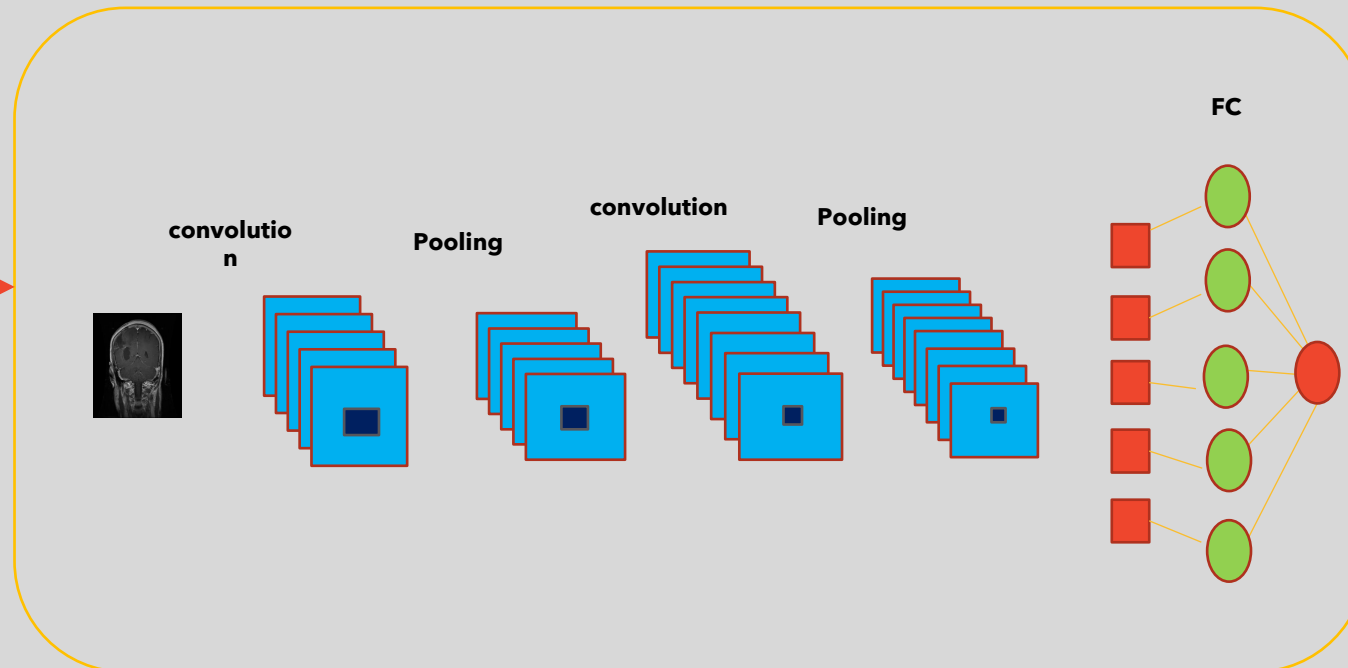

2- Software Analysis

Convolutional Neural Network (CNN)

INPUT

OUTPUT

3- Demo

02/11/1444

3- Possible customers

Direct

- Radiologists
- MRI technologists
- Medical companies who interest in developing MRI tools such as (SIEMENCE / GE / PHILIPS...ETC).

InDirect

- Patients with brain tumors (gliomas).
- Radiology technicians
- Neuro- doctors
- Surgeons (pre-operation)

5- Business plan

Basic

- Detect the brain tumors (Glioma)
- Support only one sequence (T2 MRI image).
- Support only axial images

Professional

- Detect and localize the brain tumors (Glioma).
- Support multiple sequence (FLAIR/ T2/ DWI MRI image).
- Support axial, sagittal, and coronal MRI images.
- Writing a primary medical report.

6- Limitations & Next step

What *RadDet* needs?

Limitations & \mapsto Next step for RadDet

- The primary dataset used in the Demo has limited sequence (only (T2 MRI images))

It will use variety sequences for glioma such as (FLAIR/ DWI MRI images).

Limitations & \mapsto Next step for RadDet

- The dataset of MRI images from Kaggle.com

It will be extracted from Saudi hospitals after collaborating with Ministry of Health (MOH).

Limitations & \mapsto Next step for RadDet

- The Demo displays a simple code by using OpenCV library

The software will be based on a powerful Deep learning algorithm (CNN)

THANKS

Don't hesitate to ask about anything you need.
