What is the Problem?

Manual entry of invoices and archiving documents

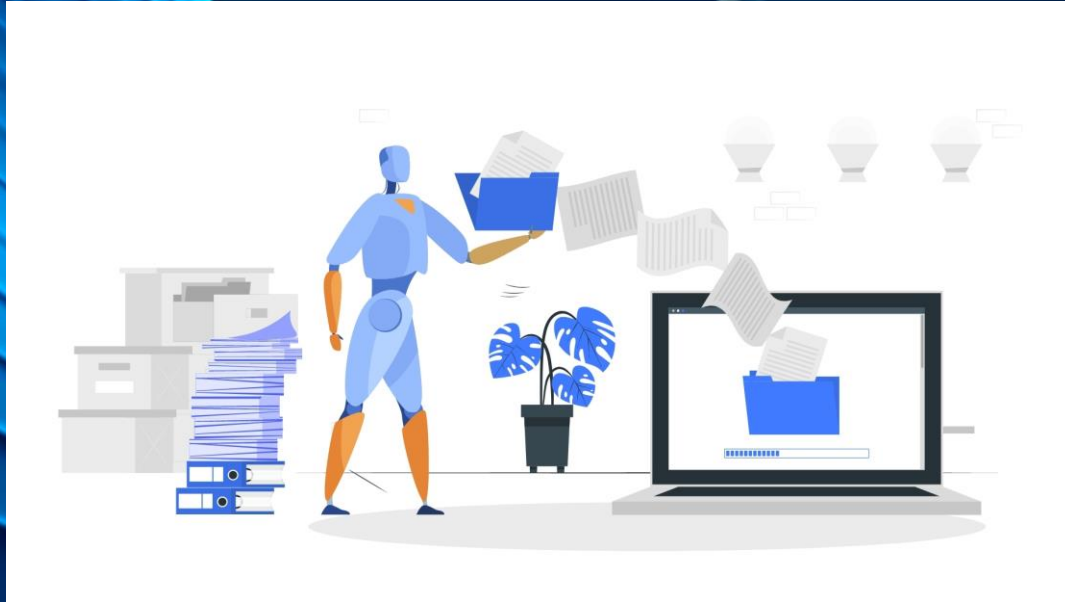

1-more employee needed

2-inaccurate financial reports

3-can cause Financial penalty

What is your Solution?

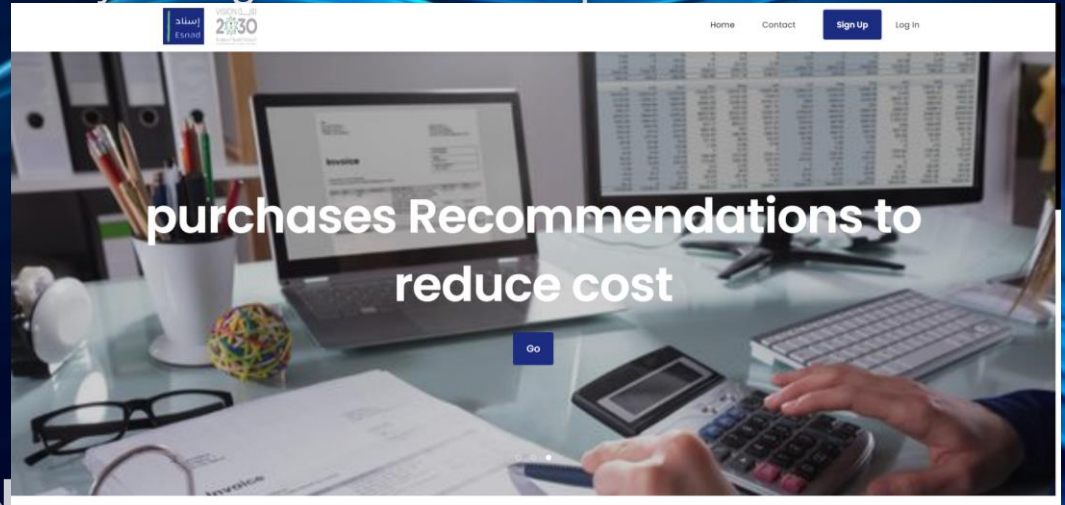

Automation of data entry and auto-save to the electronic archive will help to :

- Faster purchases processing
- More accurate entries
- Lower operation cost 40%

Technical materials (For Demo)

- Front- End Developer :(HTML, CSS, JS, Bootstrap) For Website.
- Simple NLP to recognize text in invoices to be readable for the machine format
- Extract-Text-From-Images-Quickly-Using-Keras-OCR-Pipeline

How will this application make Money?

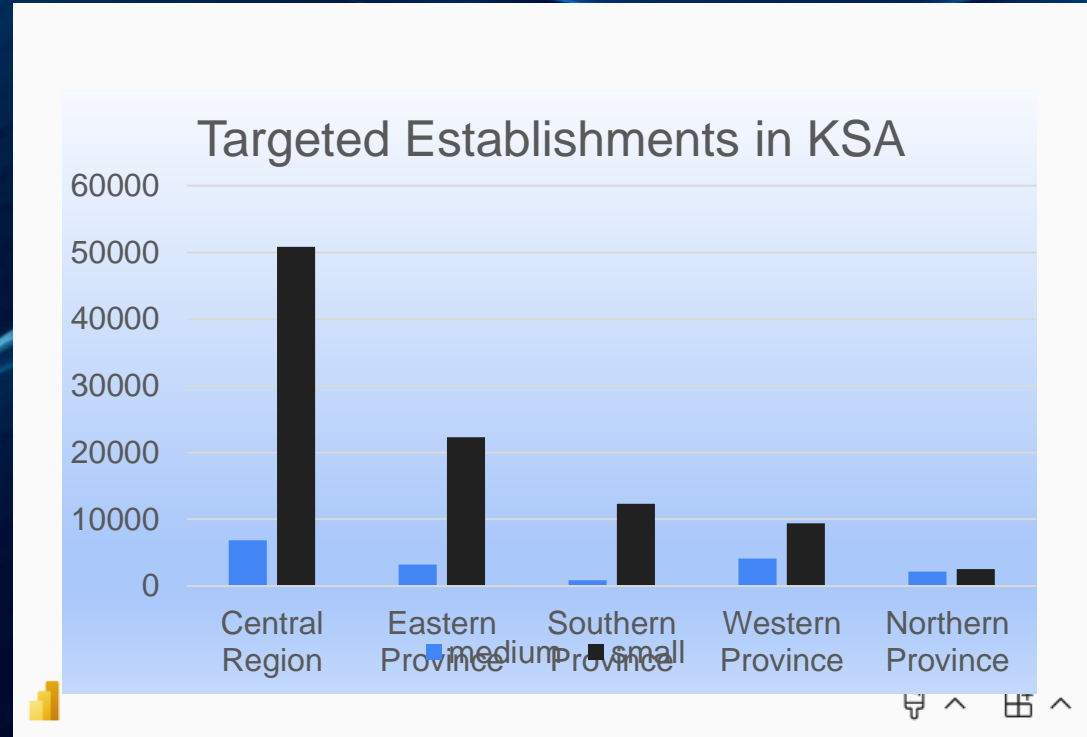

It will be a saas business model that will charge the users for the services the product will categorize based on company usage monthly (e.g):

- 1-850 invoice processing with only 1 employee or visitor
- 2- 1800 invoice processing with 2 employees or visitor
- 3-free trial for the new customer

Target Customer

- Total small 97,453
- Total medium 17,118

What is the Future?

- 1-build and develop a fully automated accounting system with an electronic archive.
- 2-collect data that can lower the cost through knowing the cheaper supplier in the area.
- 3-provide marketing data about B2B products.
