What is the Problem?

It is very unfortunate that our elderly loved ones, our fathers, mothers, and sisters may be exposed to an incurable disease that makes them lose the taste of life and the pleasure of communicating with their loved ones and relatives.

What is the Problem?

- 130 Thousand Alzheimer's patients in the KSA.
- By 2050 The number of people with Alzheimer's disease will double.
- Every 3 seconds someone around the world develops dementia.
- There are more than 9.9 million new cases of dementia each year worldwide, which means one new case every 3.2 seconds.
- Early intervention and accurate diagnosis save USA states alone up to \$7.9 billion in healthcare costs

What is your Solution?

This project, which aims in its entirety to help them and guide them towards a better life and manual communication with careful monitoring by relatives in addition to An accurate mathematical program that notices all his immediate and temporary memories in order to preserve their being in our society without worry or fear of the unknown and the power of disease, which has become a phenomenon in the world due to the acceleration of life and the variety of strange foods on their societies.
