MAKING STANDARDS REVIEW SEAMLESS

ABDULLAH

SERIAL ENTREPRENEUR

SAGER

DIGITAL TRANSFORMATION CONSULTANT

OBAID

CYBER SECURITY CONSULTANT

PROBLEM DEFINITION
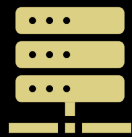

Reviewing standards is repetitive task task

it is search and reading intensive

people who do it are well paid and bored out of their minds, and mistakes often happens

The process can be improved using AI

The app is a question-and-answer model, you feed it standards document then you ask it natural language questions about the standards.

It uses cohere to make sense of the data with python logic, and deployed locally using StreamLit.io

THE SOLUTION

DEMO

Depends on the client, for small businesses it will be a SaaS solution.

Enterprise level organization it will be on premises with licensing deal.

HOW WILL THIS APPLICATION MAKE MONEY?

WHAT IS THE FUTURE?

The next steps for product development include improving natural language processing and personalizing responses for individual employee roles.

The end goal is to create a comprehensive, AI-powered support system that saves time and resources, improves employee satisfaction and productivity, and integrates seamlessly into existing company infrastructure.

THANK YOU
