Perform Fast, High-efficiency Chiral Separations Like Never Before

InfinityLab Poroshell 120 Chiral Columns
Cover Every Single Step of Your Chiral Workflow

Chiral enantiomers differ in their biochemical properties, and it is well recognized that racemic and enantiomeric products must be very well characterized to fully understand the properties of each enantiomer and assess the purity of the final product.

Now, you can finally achieve faster, sharper, and more efficient separations for chiral analyses across four different LC modes or by supercritical fluid chromatography (SFC). Rely on Agilent’s full range of products to build a robust and reliable chiral workflow.

1. Sample preparation is the correct starting point for all of your analyses. Whether you use simple filtration, solid-supported liquid extraction (SLE), catch and release cleanup, QuEChERS, or solid-phase extraction (SPE) - Agilent offers a high-quality product for your sample preparation needs from award-winning Captiva EMR-Lipid to trusted Bond Elut SPE and QuECHERS kits.
   www.agilent.com/chem/sampleprep

2. From routine analysis to cutting-edge research, the InfinityLab LC Series offers the broadest portfolio of HPLC and UHPLC solutions for any application and budget.
   www.agilent.com/chem/LC

3. Use Agilent InfinityLab supplies to increase throughput and minimize instrument downtime for your HILIC applications:
   - Stay Safe caps help to avoid evaporation of harmful solvents and to keep your mobile phase concentration consistent
   - Quick Connect and Quick Turn fittings for easy-to-use and hassle-free connections
   - Filtration assembly and inline filters to remove particles from buffered mobile phases to extend your column lifetime
   - Well plates for high throughput applications
   - Smart supplies such as column ID tag, deuterium lamps, and flow cells with RFID to enhance traceability and simplify documentation
   www.agilent.com/chem/lc-supplies

4. The InfinityLab Poroshell 120 portfolio includes four modern Chiral chemistries that offer the highest separation efficiency, ruggedness, and reproducible chromatography for your Chiral separations.
   Now you can run more samples in less time thus achieving higher throughput. You can also substitute your normal phase methods with reverse-phase or polar ionic, for a leaner and greener lab.

How do I select my Chiral Column?

A screening protocol is recommended to choose the best Chiral column to develop a robust method. View our recommended general screening protocol in the Agilent Chiral Application Compendium (publication number 5991-8450EN).

You can also view our short webinar for a more detailed view of our recommended screening process at www.agilent.com/chem/chiralscreeningwebinar

Separate nearly any Chiral compound:
Four chemistries across four different LC modes and SFC options offer a wide range of selectivities.

Agilent Poroshell 120 Chiral Bonded Phase Structures

InfinityLab Poroshell 120 Chiral-CF (Cyclofructon CF-6)

InfinityLab Poroshell 120 Chiral-V (Vancomycin)

InfinityLab Poroshell 120 Chiral-T (Teicoplanin)
Yes, you can shorten run times – and improve resolution – for Chiral separations

Like all InfinityLab Poroshell 120 columns, Poroshell 120 Chiral columns are based on superficially porous particle technology, which features a solid silica core and a porous outer layer. Compared to traditional totally porous particles of the same (or similar) size, Agilent Poroshell particles deliver higher chromatographic efficiencies and enable fast high-resolution separations.

### Challenge
Resolution of chiral enantiomers

**Before**

- R-form
- S-form

**Now**

- R-form
- S-form

### Innovation
Agilent Poroshell superficially porous particle technology

- 2.7 μm

### Speed

- **Conventional chiral separation**: 10-20 minutes
- **Fast Poroshell chiral separation**: 1-3 minutes

### Productivity

- **Conventional column**
- **10x throughput** with Agilent InfinityLab Poroshell 120 Chiral columns
Now you don’t have to compromise on your Chiral separations. InfinityLab Poroshell 120 Chiral columns are the first columns to combine superficially porous particles with innovative Chiral stationary phases to deliver:

- High performance and speed, compared to totally porous Chiral stationary phases
- Ruggedness and reliability with proven Agilent InfinityLab Poroshell 120 particle technology
- Sizes to suit any application: 2.1 and 4.6 mm ID configurations in 50, 100 and 150 mm lengths
- Fast run times, superior peak shape, and high resolution
- Increased throughput and lab productivity with more efficient Chiral separations

Perform Chiral separations in less than 5 minutes using your existing LC systems

Superficially porous particles provide higher efficiency and sharper peak shapes. Throughout is dramatically improved with shorter runtimes, compared to fully porous particle columns.

Traditional Chiral Separation—
totally porous particle

More application notes can be found with Agilent LC Application finder.
Switch Normal Phase Methods to Reverse Phase for Speed and Solvent Savings

By migrating normal phase methods to reverse phase you not only achieve an increase in speed and resolution, but you are able to use methanol as the main solvent over heptane and ethanol. With these combined changes you can achieve:

- 3.5 times faster run time
- 69% less solvent usage
- Flexibility to use any LC system and MS compatible with methanol as the main solvent
- Higher sensitivity with peaks 10 times taller

Note: This method adjustment involves a change of column chemistry and solvent, it does require validation. Fortunately, since this method is a quantitative assessment of a minor competent it requires only a few test elements. These are accuracy, precision linearity, specificity, and limit of quantitation. (ORA Validation and Verification Guidelines for Human Drug Analytical Methods, 8_29_2014).

Reliable efficient, always innovating for your best result

You can rely on Agilent InfinityLab LC instruments, columns, and supplies to deliver rugged quality and robust analytical results. But our promise to you does not stop there. Every component of the Agilent InfinityLab LC family is uniquely designed to work together, and to help you continuously improve your workflow, for efficiency gains that help you get more done and reduce operational costs.
