CleanTech Lithium PLC ("CleanTech Lithium" or the "Company")
Investor Webinar

CleanTech Lithium PLC (AIM: CTL), an exploration and development company, advancing the next generation of sustainable lithium projects in Chile, announces CEO Aldo Boitano and Non-Exec Chairman Dr. Steve Kesler (PhD in Mineral Technology), will provide a live investor presentation on Friday 10 June at 11:00am BST. The presentation will be hosted by Daniel Fox-Davies and include commentary from Gaius King, Research Analyst at Fox-Davies Capital.

Following the Company's recent drilling and brine assays results and Direct Lithium Extraction test-work, which confirmed Battery Grade Lithium (99.9% Lithium Carbonate), the presentation will provide an update on the Company's activities as it seeks to produce battery grade lithium by 2024/25, with near zero carbon emissions and low environmental impact, offering the EU EV market a green lithium supply solution.

The live presentation is It is open to all existing and prospective investors and will be followed by a Q&A session. Investors are encouraged to submit questions pre-event to daniel@fox-davies.com.

Notes

CleanTech Lithium (AIM: CTL) is an exploration and development company, advancing the next generation of sustainable lithium projects in Chile. The Company's mission is to produce material quantities of battery grade lithium by 2024/25, with near zero carbon emissions and low environmental impact, offering the EU EV market a green lithium supply solution.

CleanTech Lithium has two prospective lithium projects - Laguna Verde and Francisco Basin projects located in the lithium triangle, the world's centre for battery grade lithium production. They are situated within basins entirely controlled by the Company, which affords significant potential development and operational advantages. The projects have direct access to excellent infrastructure and renewable power.

CleanTech Lithium is committed to using renewable power for processing and reducing the environmental impact of its lithium production by utilising Direct Lithium Extraction. Direct Lithium Extraction is a transformative technology which only removes lithium from brine, with higher recoveries and purities. The method offers short development lead times, low upfront capex, with no extensive site construction and no evaporation pond development so there is no water depletion from the aquifer or harm to the local environment.
