

Bubble Science Experiment Tips

Read below for extra tips to help you complete your science experiments.

Fizzy, Foamy Bubble Lab

- Do not consume or inhale the bubble ingredients or bubble solution.
- Let your bubble solution sit overnight. The longer it sits, the better the bubbles will be!
- Try making the big bubble outside and use the wind to help the bubble form. Remember as soon as you see the bubble start to form, bring the wands together to close it off.
- Depending on the weather, it may take your fizzy bubble ball several days to dry. Be patient! If you remove the ball mold too soon, it may split the ball in half.
