

Draw a Nile Crocodile

Even though they are named after the Nile River, the Nile Crocodile inhabits many areas of Africa, including South Africa. These crocodiles can grow up to 20 feet long! They live in rivers, marshes and swamps. Unlike many reptiles, Nile Crocodiles protect and care for their eggs before they hatch. They eat mostly fish, but occasionally eat larger animals as well, like buffalo and antelope. Draw a Nile crocodile on a separate piece of paper by following the steps below!
