

Make your own Omnibird!

- Print and colour the omnibirds, then cut or fold the paper to mix and match different bird parts. Now create your own omnibirds!
- If you want omnibirds to be interchangeable, make sure the neck and leg edges are all in the same place so the parts fit together.
- To make a flip flap book of all your birds, cut along the lines nearly to the left edge and staple them together.

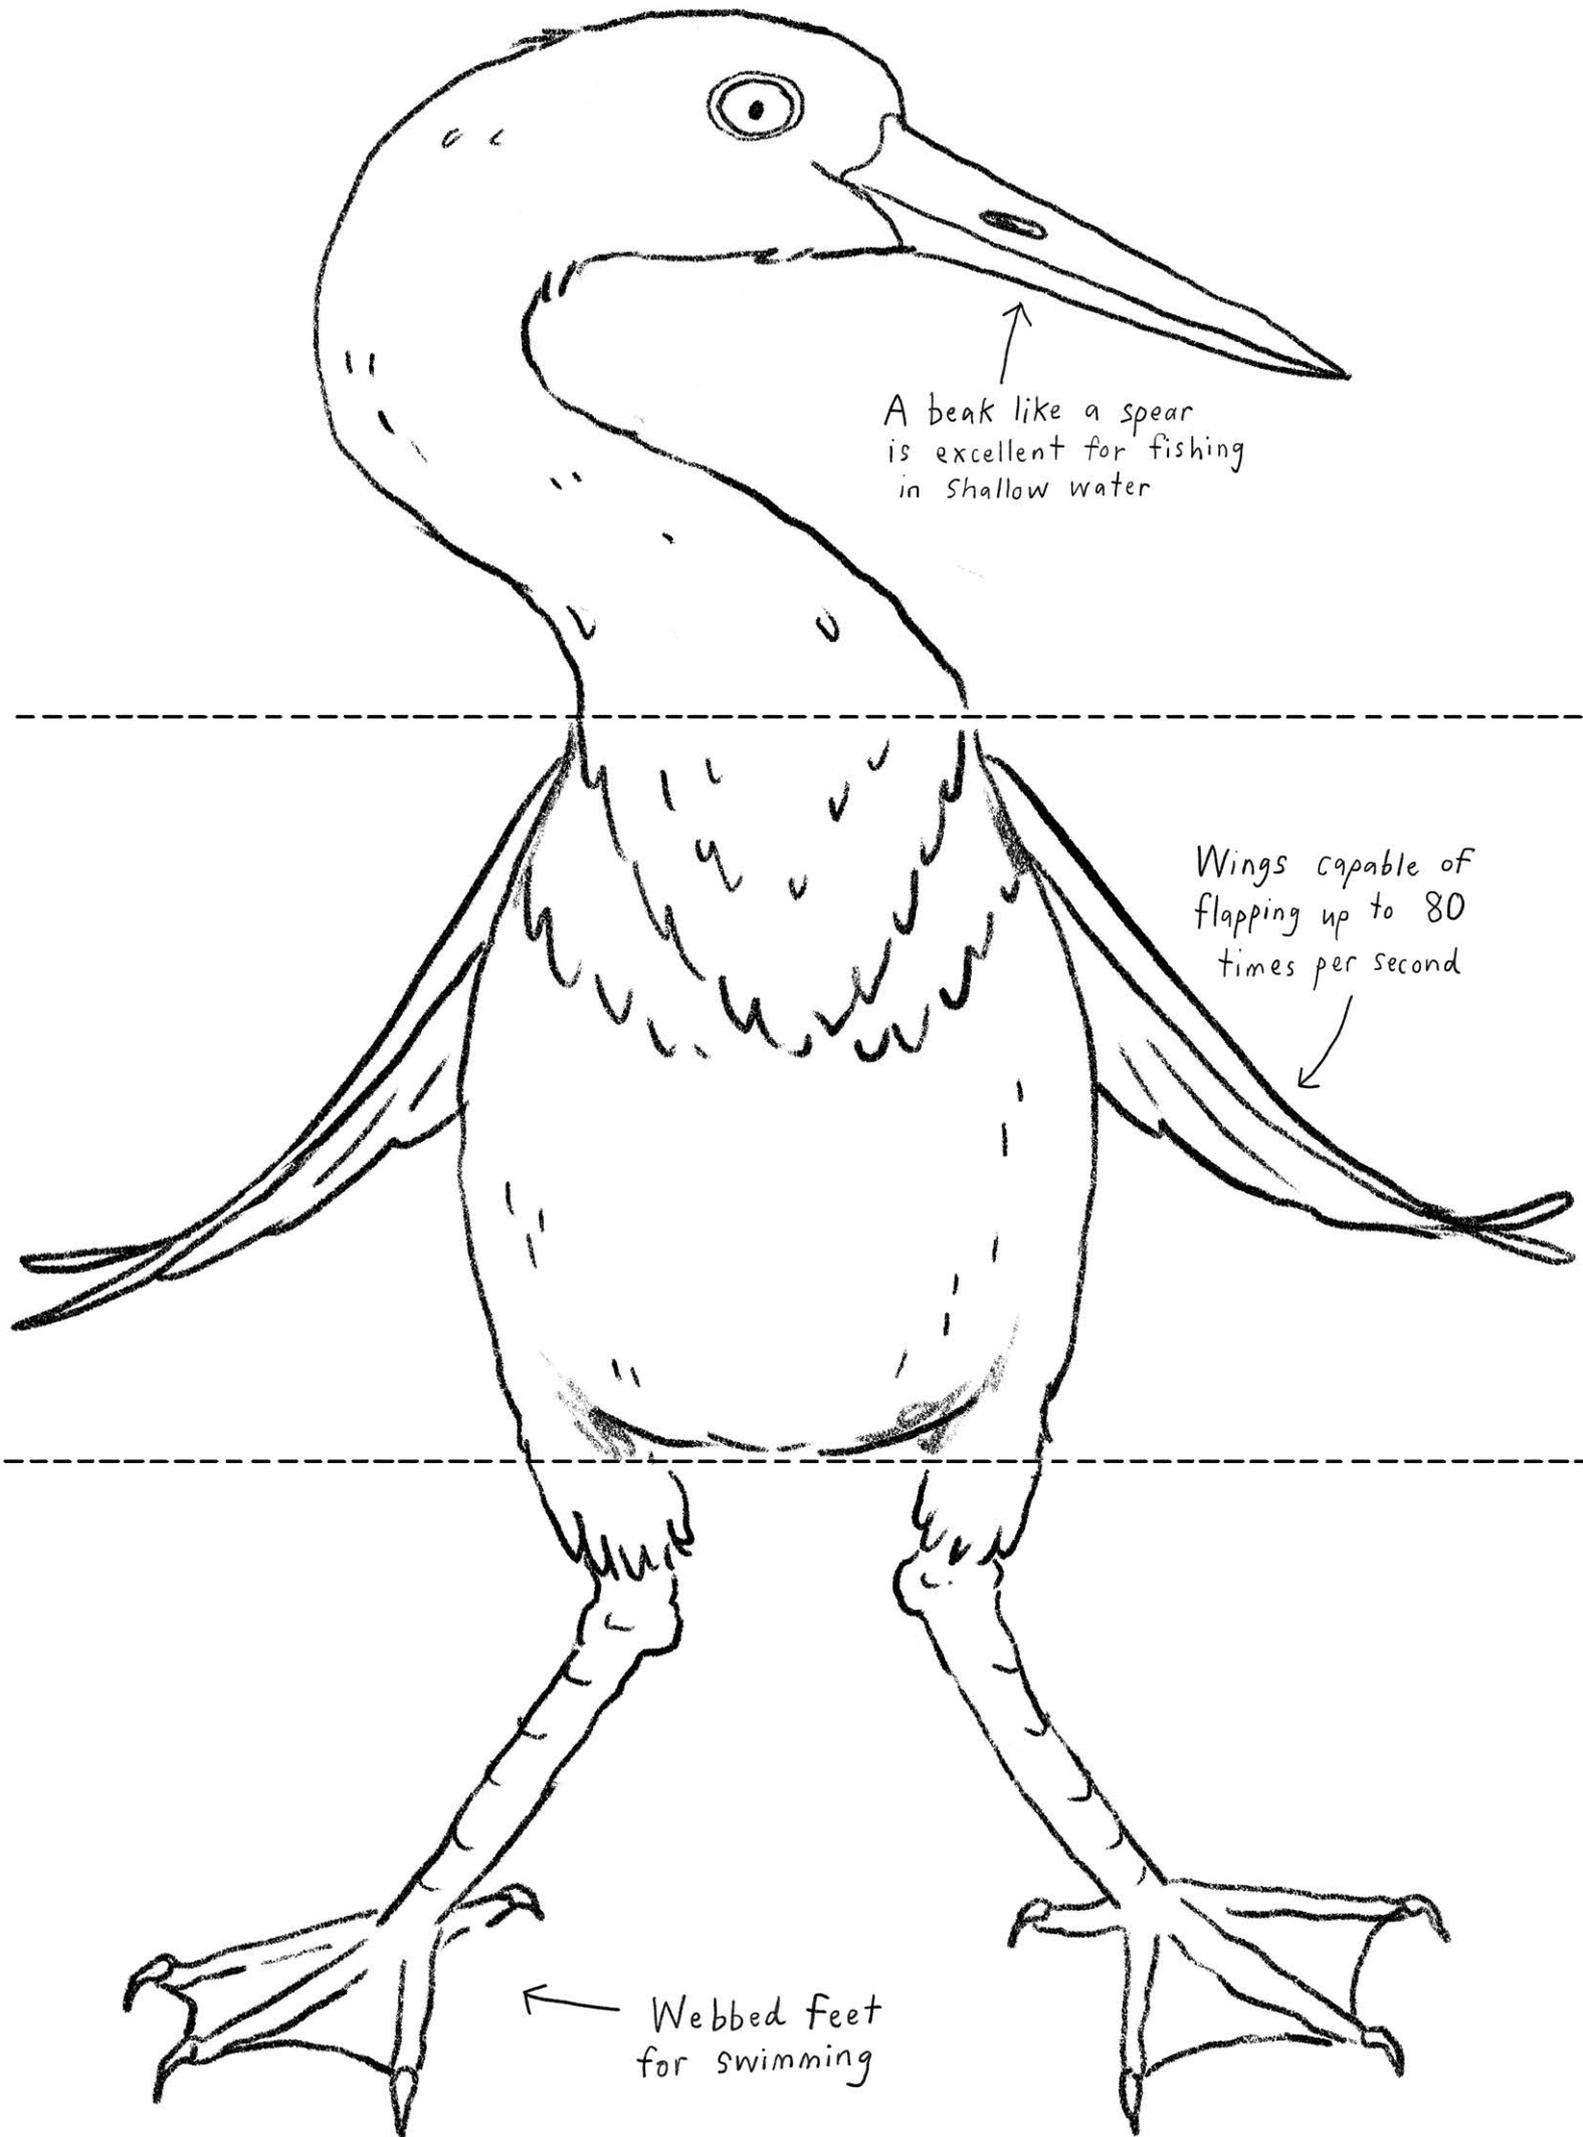

Combs and
Wattles are
two types of
caruncle

Striped
camouflage
for hiding in
long grass

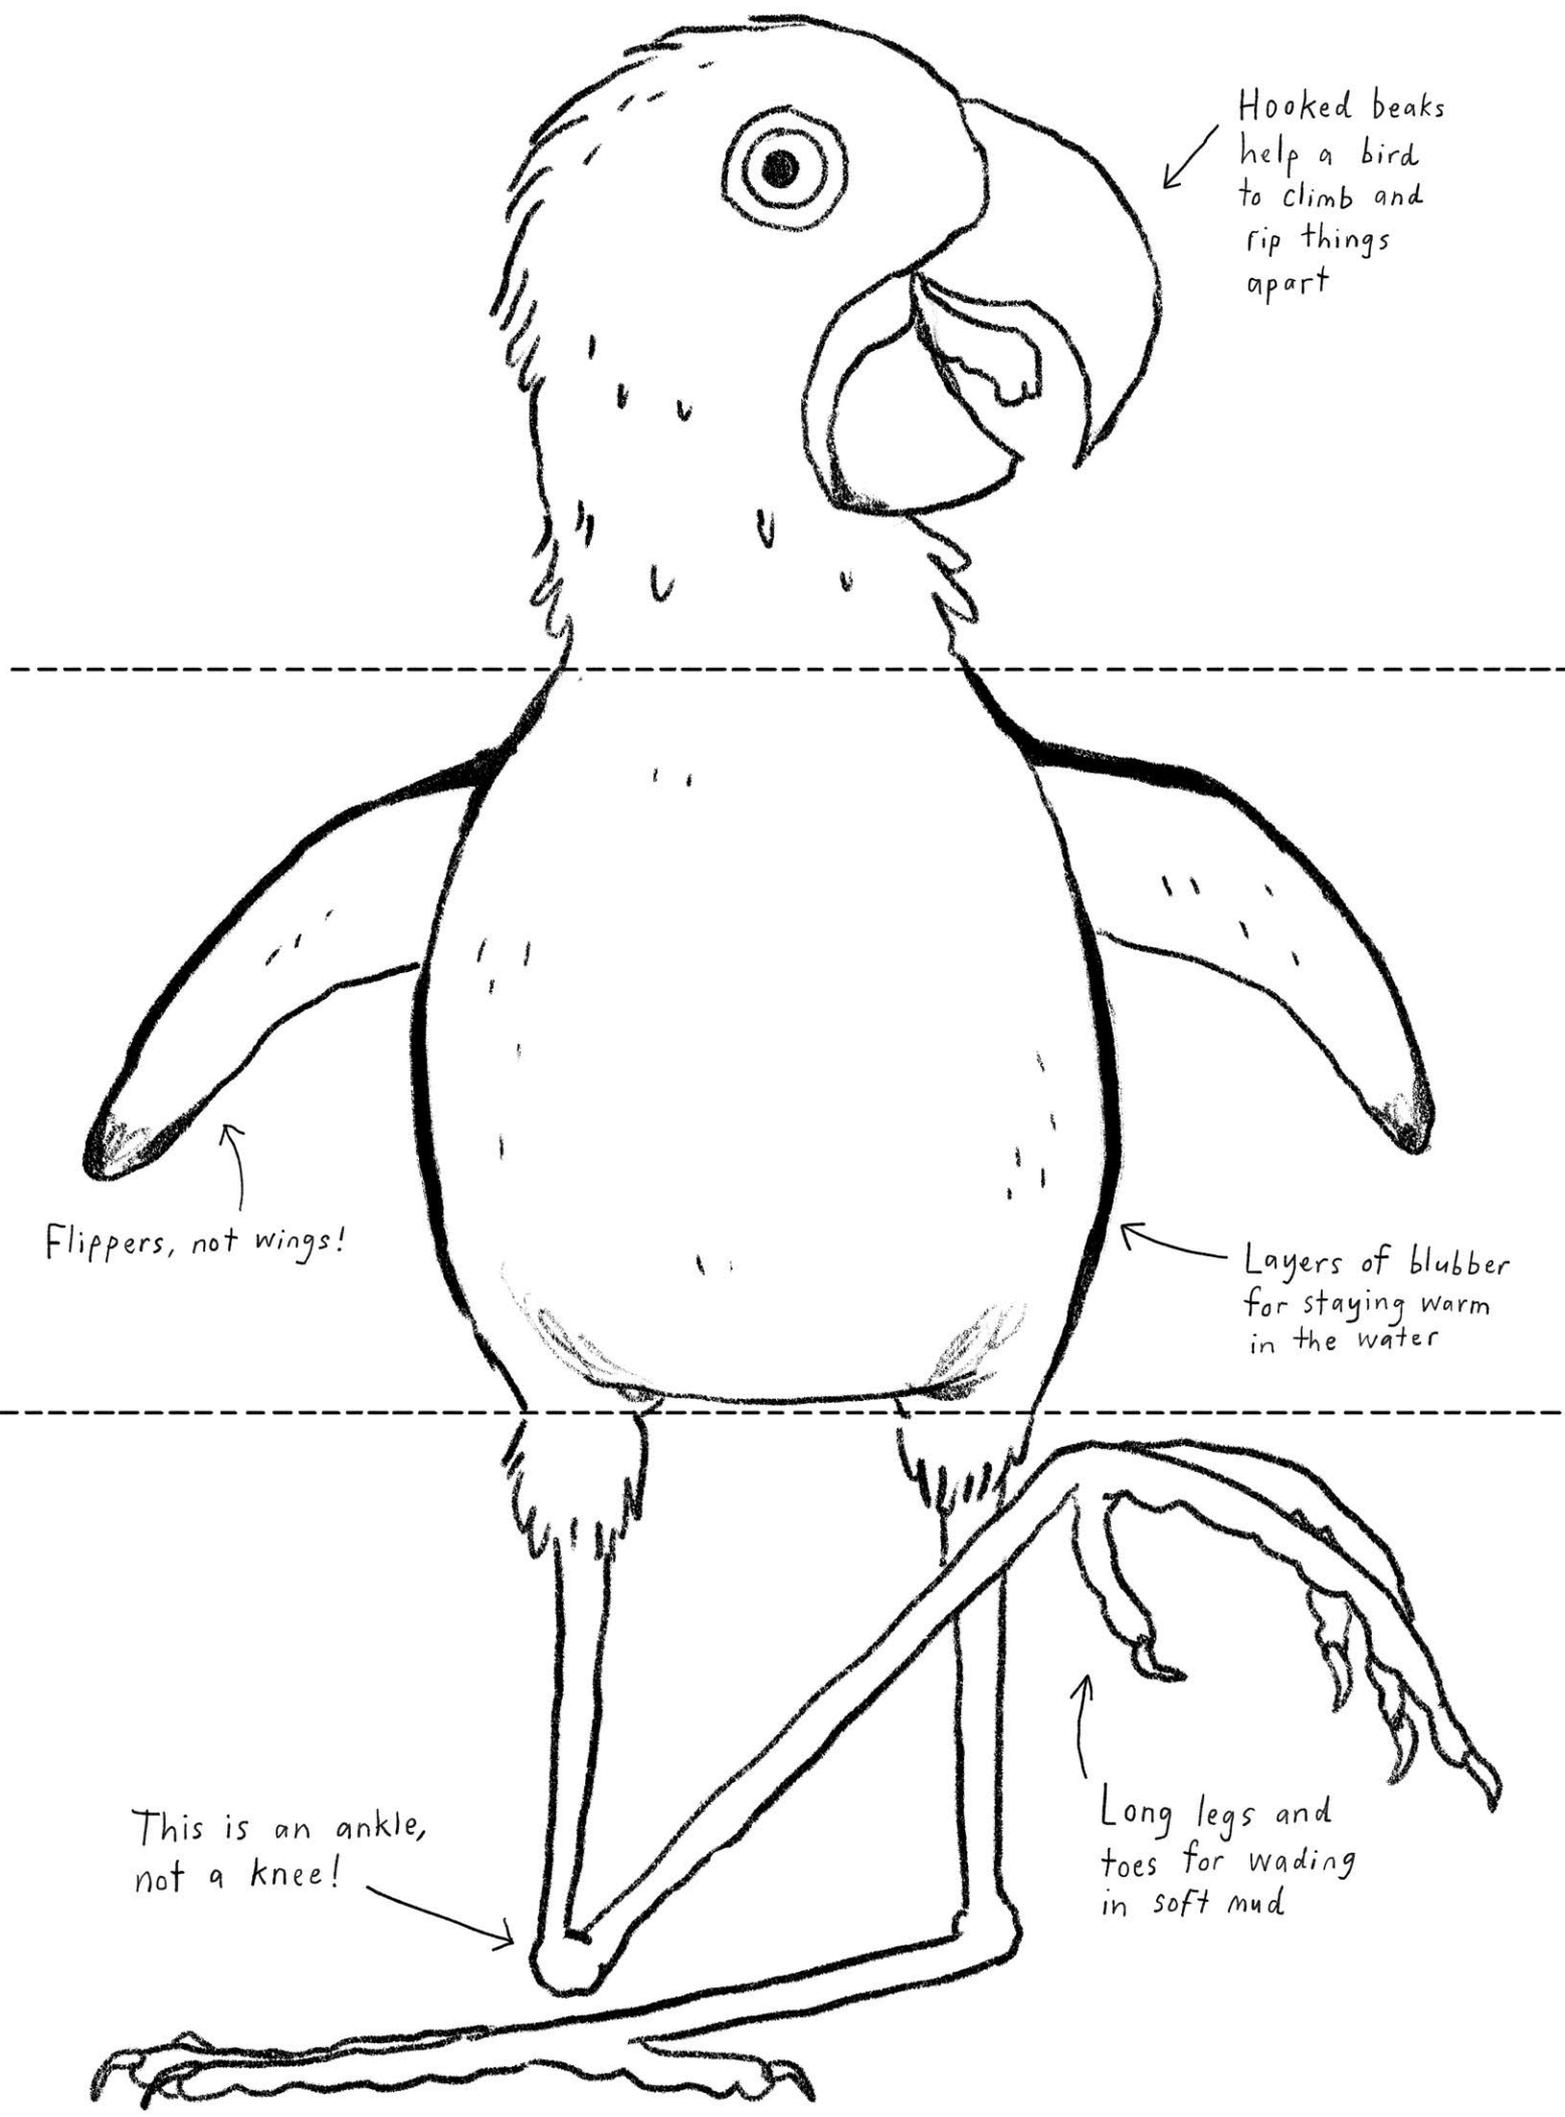

Zygodactyl feet
for superb grip

A beak like a spear
is excellent for fishing
in shallow water

Wings capable of
flapping up to 80
times per second

Webbed feet
for swimming

Hooked beaks help a bird to climb and rip things apart

Flippers, not wings!

Layers of blubber for staying warm in the water

This is an ankle, not a knee!

Long legs and toes for wading in soft mud
