Description

The LumenID: Open DMX USB is a software/hardware package that provides a direct connection to a PC for quick and easy addressing, diagnostics and demonstration of Lumenpulse fixtures. LumenID integrates with both LumenID V3 and LumentalkID software and is able to turn Lumenpulse fixtures into a networked installation by locating and identifying each fixture for quick, efficient addressing. Created for novice and advanced users alike, LumenID's intuitive approach results in a significant reduction in commissioning time and installation costs.

Features
