

Use simulation to see how an existing system might work if altered or visualize the way a new system will behave before it is developed.

SIMUL8 Standard—\$1,495

SIMUL8 Standard 2005 is an integrated environment for working with simulation models. The powerful language and model visualization capabilities enable you to quickly create the accurate, flexible, and robust simulations you need.

Easy to Use

SIMUL8 Standard 2005 uses Windows™ 'point & click' technology to make SIMUL8 the easiest to use business simulation software. Drag and drop components and dialog driven Visual Logic modeling language provide you with everything you need to start building simulations straight away. The context sensitive Help makes it easy to find answers to questions about SIMUL8 features. You can also get simulation help from SIMUL8's unique simulation assistant.

Powerful

SIMUL8 Corp. has used industry leading software developers to build a business simulator capable of the most detailed simulations. SIMUL8 was first used in 1995 by the Automotive industry and is now used by thousands of organizations in industries such as Aerospace, Metalworking, Mining, Financial Services and Healthcare to make hundreds of important decisions each year. This versatile tool has been successfully applied to solve line balancing, supply chain management, resource allocation and bottleneck analysis problems, and new applications are being developed at all times.

Supported

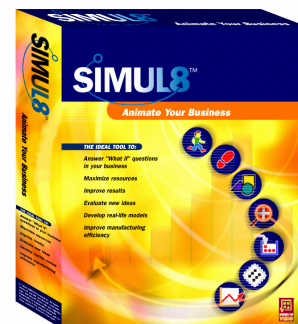

The SIMUL8 standard edition entitles you to free support for the life of the version when you register. Support can be accessed by email or telephone and SIMUL8.com has many free resources to help you build your simulation. With SIMUL8 support, you won't feel like you are on your own.

OptQuest for SIMUL8 - Retails Individually at \$495 (Optional Plug-In)

OptQuest adds optimization features to SIMUL8. Simulation is good for evaluating proposed decisions but to help determine the best options, use OptQuest. It enables users to find the optimal solutions to "what-if" questions in their simulations.

Stat::Fit for SIMUL8 - Retails Individually at \$245 (Optional Plug-In)

Stat::Fit for SIMUL8 finds the statistical distribution that best fits and formats it for immediate input into SIMUL8. This frees the analyst from the time consuming task of testing and verifying appropriate simulation inputs.

*Pioneering the use of
simulation for improved
business decision making!*

SIMUL8 Professional—\$4,995

SIMUL8 Professional 2005 provides all of the features of SIMUL8 Standard plus power features that increase SIMUL8's functionality and make everyday use more efficient. New features include Virtual Reality (VR), which allows you to represent your simulation in a realistic 3D environment, speed analyzers and additional simulation objects for building models. Also included with SIMUL8 Professional are the Stat::Fit and OptQuest plug-ins for SIMUL8. Further advantages of SIMUL8 Professional are as follows.

Makes it Possible to Distribute Simulations to Others

SIMUL8 Viewer

Each copy of SIMUL8 Professional comes with a SIMUL8 Viewer that you're licensed to distribute to as many people as you like. It lets colleagues and customers who don't own SIMUL8 view your simulations.

Template Licensing

License your simulations and distribute them to other SIMUL8 users, without allowing them to alter anything that they should not. SIMUL8 Template Licensing allows you to turn off unnecessary toolbars, protect the internal workings of your simulation, and distribute your work securely.

Makes it Easier for Simulation Teams to Work Together

SIMUL8 Professional has a 'Track Changes' feature that allows you to compare two simulations and track the differences. This means that more than one person can work on a simulation at a time saving hours and sometimes weeks of time.

Enhances SIMUL8's Communication With Other Packages

COM—Using the latest Windows standards SIMUL8 COM can be used to communicate with and control SIMUL8 from other applications, like Excel, VBA, VB, C++, Delphi or any other ActiveX /COM supporting software.

SQL—SIMUL8 SQL allows SIMUL8 to connect to any data source that supports SQL, like Oracle, Sybase, or Access and to read from, write to and query it. SIMUL8 is supplied with a number of standard SQL statements embedded for ease of use, and also allows you to write your own SQL for more complex problems.

Purchasing

To purchase SIMUL8 Standard or Professional 2005, or for further information, contact Visual8 Corporation at 1-800-878-3373 or info@visual8.com. Visual8 is the preferred solutions developer, training group, support provider, and reseller of SIMUL8 in North America and will be more than happy to help you determine which product best meets your needs. When purchased with training from Visual8, a discount of \$200US is applied to the package price. Visual8 has also produced and published the textbook *Simulation Modeling with SIMUL8*.
