SLR Magic MicroPrime CINE Lenses The SLR Magic MicroPrime CINE lenses are designed to be compact and robust for use in a professional setting. The MicroPrime CINE lenses have a large image circle that covers up to full frame. Witness markings on the lenses are all calibrated for accuracy professional use on the field. Each lens is balanced in a similar weight distribution so that recalibration is not required during switching lenses when using a 3-axis gimbal. Lens gears are built-in with a throw slightly longer than photographic lenses but at the same time manageable when a motorized follow focus is not used. Each lens features internal focusing mechanism and comes with a standard 85mm diameter suitable for matte box use. In the situation

SLR Magic APO MicroPrime CINE Lenses They achieve outstanding images under challenging lighting conditions. When taking pictures with many image-dominant, open light sources, it is common for correction defects to show up. These apochromatic (APO) lens, longitudinal chromatic aberrations are corrected by its unique optical design and special selection of optical elements. The color defects are therefore significantly lower than the defined limits. Bright/dark transitions in the image, and especially highlights, are rendered with no colorful artifacts. Thanks to the low level of longitudinal chromatic aberration, there are no visible aberrations. So an illuminated portrait scene by night with

Item Number	SLR Magic Anamorphic Adapters	List Price (EUR)
SLR Magic Anamorphic Adapters Attach to the front of a prime lens to create a true anamorphic effect. This gives users the classic 2.35:1 aspect ratio using cameras with standard 16:9 or 4:3 sensors, at a very affordable price compared with dedicated anamorphic lenses. SLR Magic's adapters offer cinematographers the much sought after horizontal flaring and streaks from light sources and ellipsoidal bokeh.

Item Number	SLR Magic Rangefinder Adaptors	List Price (EUR)
SLR Magic Rangefinder Adaptors Greatly simplifying the process of focusing with anamorphic adapters, the SLR Magic Rangefinder Cine Adapter provides a calibrated focus scale, industry standard focus direction, and a cine-style focus gear for your lens set up. When using most anamorphic adapters that mount to the front of your lens, focusing requires matching the distance on the anamorphic adapter and the lens itself, this can cause problems when trying to pull focus. However, when using the Cine Rangefinder, you set both your anamorphic adapter and lens to infinity and pull focus on the rangefinder.

Item Number	SLR Magic Image Enhancer Filters	List Price (EUR)
	SLR Magic Image Enhancer ND / Pro Filters SLR Magic's new ND filters have been designed to specifically overcome the headaches you get when using modern digital sensors. Due to their broad colour spectrum they are more sensitive to far infrared light which affects the image signal. With most variable ND filters and even fixed ND filters, the more ND you introduce the more infrared contamination you get.
