

## **Java Developer – Oxon/Bucks border (Thame) Salary commensurate with experience + Bens**

Red Fox ID are an R&D / Technology based company focusing on the Intelligent Transportation Solutions (ITS) & Tolling arenas. The company management team is made up of some of the industry's leading figures, all of whom have over two decades of proven experience in the delivery of innovative, industry leading software for the world of vehicle detection and classification. The team has been instrumental in not only developing but setting the accuracy standards uniformly used throughout the tolling world today, a team with Queen's awards for Innovation and Export under their belt.

Due to the launch of their new technology and the successful acquisition of several projects Red Fox are now looking to recruit a Java developer to support the Technical Director with advanced Graphic User Interface development and design using Java and JavaFX. Your primary responsibility will be to design and develop user applications to support the analysis of complex vehicle classification problems and the presentation of large data sets. This is all about presenting our complex world in a way that humans can understand!

What you'll need:

- A passion and demonstrable skill set in advanced Java design, combined with a strong understanding and ability to code successfully within graphical user interface environments.
- Practical experience of Java FX would be a distinct advantage, as will knowledge on how to display large data sets efficiently, prior experience of Eclipse also beneficial.
- A history of working with and the understanding of multiple platforms would be extremely useful, Linux knowledge would also be preferable.
- The desire to 'own' the whole problem, from initial specification, to implementation, test, delivery and early user support.
- Possess strong problem-solving skills, but have the experience and maturity to recognise when to escalate the situation and ask for assistance.

What's on offer:

- A unique opportunity to work on a new system that will be used world-wide
- To be a part of a company in its early development phase
- Working on something that will be used by millions of people even if they don't know it!
- Rapid growth creates career opportunities not found in larger companies
- Potential for global travel
- Training will be provided as required

This is a permanent position, however, due to the nature of the organisation there is the possibility of a flexible working arrangement dependent on circumstance and experience.
