

Reducing variation in care in general practice

Introducing DXS Point-of-Care – standardised and localised content and referral forms for general practice

DXS' Point-of-Care (DXS PoC) clinical decision support solution provides clinicians and primary care staff with instant access to high quality clinical guidance, treatment pathways and forms intelligently filtered and presented at the appropriate time. Our solution aims to improve treatment outcomes and reduce unwarranted variation in care throughout general practice.

Join the digital healthcare revolution with DXS Point-of-Care Clinical Decision Support.

NHS accredited clinical decision support

Medical knowledge is expanding exponentially, and healthcare practitioners often struggle to keep abreast of information, and that could impact on patient care. DXS PoC provides a single, essential clinical knowledge base and information platform to overcome clinical information overload.

Our solution was developed to meet the primary features judged by research to be a best-of-breed CDS solution which include automatic provision of decision support as part of clinician workflow; provision of decision support at the time and location of decision making; and computer-based decision support.

DXS PoC enables a central point of distribution for CCGs to share relevant and up-to-date clinical information with practitioners and healthcare workers. Our software seamlessly integrates with all major clinical systems to provide clinicians and primary care staff with instant access to high quality clinical guidance, treatment pathways and forms during consultations. As part of our solution we convert local care pathways into structured plans of care, designed to support the implementation of CCG designated clinical guidelines and protocols for each stage in the management of a patient with a specific condition.

In short, **DXS PoC aims to improve treatment outcomes and reduce unwarranted variation in care throughout general practice.**

FEATURES

- ✓ Integration with main clinical systems in the UK
- ✓ Clinically coded and organised knowledge base
- ✓ Patient-friendly content
- ✓ Auto-population, annotation, printing, sending and saving of referral forms
- ✓ Easy to use assigning functionality
- ✓ Comprehensive usage reports
- ✓ Localisation of content

PLUS

PoC, also known as DXS Best Pathway, is available on the centrally-funded GPIT Futures Procurement Framework (formerly known as GPSoc 2).

Powerful benefits for your organisation

DXS PoC delivers powerful benefits for both CCG and practice staff members.

Clinical Commissioning Group (CCG) Benefits

- ✓ Enables your CCG or Federation to effectively manage and distribute relevant and policy-aligned decision support information centrally to primary care users.
- ✓ Enables CCGs with a mixed clinical system makeup to procure a single system agnostic solution for all practices.
- ✓ Reduces variation in treatment and delivers care that is coordinated and standardised which leads to improved clinical and cost outcomes.
- ✓ Enables alignment with NHS Long Term Plan objectives by introducing appropriately standardised evidence-based treatment and referral pathways.

General Practice Members Benefits

- ✓ Provides practitioners with a comprehensive knowledge base from which information can be accessed faster and more efficiently, which leads to a better quality of care.
- ✓ Enables practitioners to complete referral forms faster with auto-population and the ability to directly annotate, print, send electronically and save the form back to the patient record.
- ✓ Reduces workload through easy-to-use referral form assignment workflows.
- ✓ Provides practitioners with a comprehensive set of patient-friendly information that can be shared with patients during a consultation.

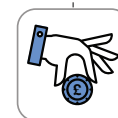

Central distribution of relevant and policy-aligned information

Single system agnostic solution

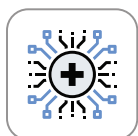

Reduces variation in care

Improves clinical and cost outcomes

Aligns with the NHS Long Term Plan objectives

DXS Point-of-Care integrated with our extensive library of expert clinical templates

DXS PoC is available as a standalone solution **OR** can be paired with our comprehensive library of CompleteCare clinical data entry templates built within the clinical system.

STANDALONE – WHAT YOU GET

A powerful clinical knowledge base – centralised, organised, safe and up-to-date.

A comprehensive, searchable database with more than 25 000 national, regional and local clinically-relevant documents ranging from professional guidance, referral forms, patient and medicines information, which is sourced from the UK's leading medical publishers and organisations.

PAIRED – WHAT YOU GET

PoC knowledge base PLUS an extensive library of expert clinical templates.

A full range of custom-built and clinically-assured, evidence-based templates seamlessly integrated with Point-of-Care, which contains all the reference information you need to drive standardised treatment protocols throughout your CCG or Federation. Our templates toolkit includes quick QOF entries, screening, comprehensive management, safeguarding, EoL, health checks, enhanced services, formularies and monitoring.

Clinically-assured and always up-to-date

Aligned to NICE, SIGN and RCGP evidence-based best practice

Supporting QOF and National Enhanced Services (NES)
