

Design workflow, simplified

Material Gallery is a design collaboration app from the Material Design team at Google. It's a home to share and track revisions of design artifacts, giving teams a better way to discuss and present their latest work.

Key features:

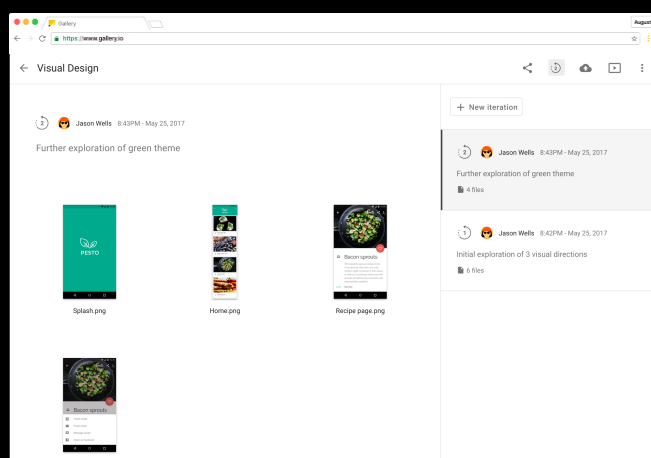

Easily share work with your whole team

Gallery makes it easy to share design work. Upload designs directly from Sketch, drag them into your browser, or sync directly with Google Drive. Gallery instantly gives you a link you can share and present to your team.

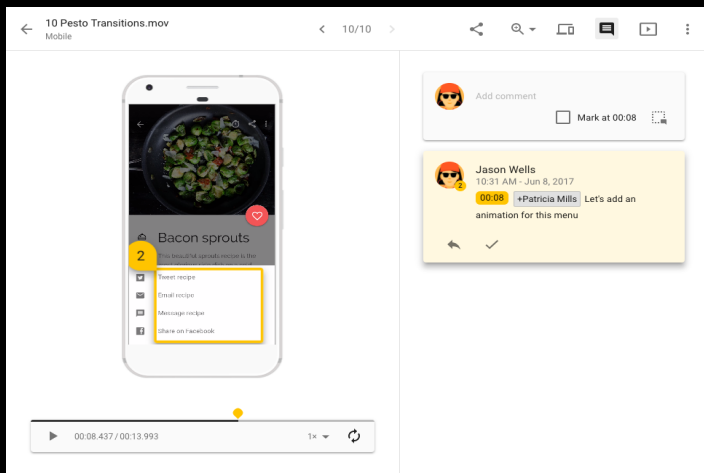

Manage your design iterations in a collaborative space

Gallery organizes uploaded designs so your team can keep track of all design iterations. Your shared project link always points to the latest set of designs.

Keep all design feedback in one place

Gallery makes it easy to capture contextual feedback on any image or video, so you can gather and respond to feedback.

Preview any design on mobile from anywhere

Gallery's app for Android and iOS allows teams to review designs on mobile devices and respond to comments on the go. Easily upload screenshots, mockups, and photos of sketches or whiteboarding sessions.
