ANTIBACTERIAL PLA

INNOVATEFIL PLA ANTIBACTERIAL is a filament composed of PLA and silver nanoparticles that provide antibacterial properties to the material, avoiding in the printed parts the growth of molds, fungi and all bacteria that cause bad odors, discoloration, stains, deterioration and corrosion.

The antibacterial effectiveness of this filament has been tested and certified in an external laboratory under ISO 22196. The test has been carried out on two bacterial strains: *Staphylococcus aureus* and *Escherichia coli*. The results obtained indicate a reduction in bacterial activity by 99.99% after 24 hours.
