

Danapad V3

The Danapad V3 is a wireless access keypad for operating your Danalock smart lock without a smartphone. With its simple Danish design and advanced encryption algorithm, the Danapad is an elegant and secure solution to wirelessly control and share access to your home.

Give access with pin codes

You no longer need to bring a key or a smartphone when you leave home. You can just use a personal pin code to unlock your door. Give your family members personal pin codes and never worry about lost keys again.

Easy to install

The Danapad V3 provides an out-of-the-box, easy-to-install and secure access solution that requires no permanent alteration to your door or entry area. Just mount it within Bluetooth range of your Danalock smart lock.

Designed for all weather extremes

The Danapad is made for outside mounting. It works well in hot and cold climates and can withstand the effects of salt, fog, and rain.

Easy to operate

Use the Danalock app to manage the access level of users. You can choose between temporary and permanent pin codes. The Danapad V3 supports up to 20 pin codes at a time.

Lockout security

If you enter a wrong access code three times in a row, the Danapad V3 will block for 2 minutes.

Illuminated keys

The keypad has built in LEDs in the keys, which light up when you enter your pin code.

Strong security

The Danapad V3 is part of the Danalock ecosystem, using an advanced encryption method for transferring data (AES 256).

Dimensions 35 x 82 mm / 1.38" x 3.23"	Mounting 2 screws or adhesive tape
Weight 120g	Pin code length 4 – 10 digits
Power 4 AAA batteries	Pin code memory 20 different pin codes
Communication Bluetooth® 4.2	Encryption level AES 256
