

PRESENTING OUR NEWEST INNOVATION **ORDER PICKING CART**

BHS Order Picking Carts are designed to quickly process orders and keep product flowing. The cart allows visibility from all four sides while keeping merchandise securely in place with lipped shelving. The Order Picking Cart is ideal for unloading packages, counting inventory, stocking shelves, gathering parts, or picking merchandise.

Durable, Dependable & Mobile

The BHS Order Picking Cart comes in four standard sizes, but can be customized to specific requirements. The OPC is equipped with fork pockets to accept transport by lift truck, while casters allow the unit to be positioned manually. Designed to endure harsh conditions, its heavy-duty steel construction and powder-coat finish help it stand up to the most extreme conditions without failing.

High Volume Picking

Moving beyond piece picking requires a lot of square footage on every cart. Order Picking Carts include multiple large-volume shelves for wave-, batch-, cluster-, and zone-picking strategies.

Ultra-Durable Construction

Heavy-duty steel and a durable powder coating ensure extremely long service life, even when handling heavy, jagged materials. Order Picking Carts are built to withstand the rigors of multi-shift material handling.

Integrated Fork Pockets

Large casters create smooth, ergonomic manual travel, but sometimes it's better to move loaded carts with a lift truck. Welded steel fork pockets make this task easy.

Custom Designs Available

Standard designs include four shelves in a variety of sizes. For unique applications, the BHS team can add or remove shelves, change dimensions, and include unique features like flow-through racking or extra-high shelving lips.
