

PRESENTING OUR NEWEST INNOVATION **ADJUSTABLE PACKING DESK**

Adjustable Packing Desks (APD) provide powerful ergonomic benefits for order packers and staff assigned to assembly, product sorting, and other manual tasks associated with warehousing, manufacturing, and industry. These variable-height work stations allow workers to keep work at the optimal ergonomic level to match their bodies.

Hazard Elimination Workstation

These units are designed for maximum flexibility within shipping and receiving rooms. They rest on swivel casters for simple repositioning anywhere in the facility. Optional threaded feet are available for stationary applications. These features make the APD highly adaptable, which can provide great efficiency gains when experimenting with shipping-room configurations.

MATCH THE WORK TO THE WORKER

Users can easily adjust tabletop elevation to keep work within the ergonomic power zone. The elimination of repetitive reaching and stretching reduces the likelihood of musculoskeletal injury.

MULTI-USER WORKSTATIONS

Extra-wide design allows multiple workers to use the same unit. Custom dimensions are available on request. Locking casters allow users to reposition units for even greater flexibility.

EASY CLEANING

Powder-coated steel wipes clean easily with standard cleaning materials. Minimal seams prevent the accumulation of dirt during use.

HEAVY-DUTY CONSTRUCTION

Adjustable Packing Desks are made entirely of steel, making them suitable for working with heavy objects. The durable powder coating prevents abrasions, corrosion, and damage from chemicals and acids.
