

**ON-SITE WASTE MANAGEMENT**

# TURNKEY WASTE HANDLING SOLUTION

Complete facility-wide waste collection with fewer workers, fewer injuries, & faster results.

Together, the products listed below provide a complete system for collecting on-site waste from multiple accumulation points, indoors or outdoors, in spaces of virtually any size.

## Bin Dumpers

The Dumpmaster Hydraulic Bin Dumper (DMA) tips and empties fully loaded Roll-Out Carts into a train of Mobile Garbage Bins (MGB). Station the Megadumper Hydraulic Bin Dumper (MD) near dumpsters to quickly empty MGBs while preventing the hazards associated with manual bin-handling.

## Roll-Out Carts

Position these rolling units at key areas across your work site. Available in sizes from 32 Gal to 96 Gal capacities.

## Mobile Garbage Bins

With the help of a Power Pusher, a train of Mobile Garbage Bins (MGB) enables single-user collection. Available in two capacities:

**MGB-660:**  
660 L / 174 Gal / .75 Yd

**MGB-1100:**  
1100 L / 290 Gal / 1.5 Yd

## Power Pusher

Nu-Star's signature Power Pusher improves operator safety, reduces staffing needs, and increases productivity by transporting heavy loads quickly, without muscle strain. With a Power Pusher, a single worker can safely move a train of fully loaded MGBs to dumpsters near and far.
