

Battery Extractor Service Stands

Models Affected: BE-SL, DS, TS & QS models

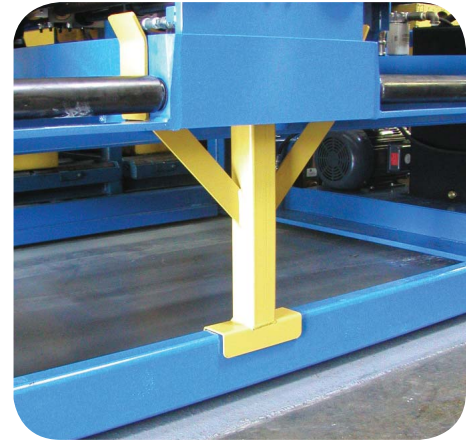

Tech Tip
TT-939

Subject:

The correct set of Service Stands are essential when performing maintenance on a BHS Operator Aboard Battery Extractor (BE).

Description:

Some maintenance tasks, and possible repairs, will require the technician to work from underneath the inner carriage. To do so safely, the carriage must be secured in a raised position. BHS offers Service Stands specifically designed for each BE model to securely support the inner carriage. BHS also offers Equalization (EQ) Chain Adjustment Stops which are designed to hold the inner carriage level with the outer frame at all four corners to allow for proper EQ chain adjustment.

Recommendation:

There are kits available for servicing each BE model. Service Stand Master Kits include the Service Stands, EQ Adjustment Stops, and a permanently anchored storage rack to hold both sets. The Master Kits are ideal for installation in the battery room, keeping the stands neatly organized and allowing for quick access when needed. For details on BHS Service Stand Kits and other BHS kits, visit our website at BHS1.com. Parts kit information can be found in the "Knowledgebase" under the Service and Support tab.

BATTERY EXTRACTOR BE SERVICE STAND KIT - DOUBLE, TRIPLE, & QUAD STACK MACHINES
P/N: 80392001
