

The Vanguard Study

Testing a new way to screen for cancer

The **Multi-Cancer Detection (MCD) test** is a new type of **blood test** that looks for signs of different cancers in the body. We need more information to understand if these tests can help find cancer early when it may be easier to treat.

We need YOUR participation in this important study!

This study is a simple way to make a big impact on the future of cancer screening in your community and across the nation.

You may be able to participate if you:

- Are between **45 to 75 years old**.
- Have **not been diagnosed with cancer** in the past 5 years.
- Can **give 2 blood samples** and answer surveys.

Earn up to \$75 for all study activities

For more information or to participate:
