of the state requesting them.

GENERAL INFORMATION.

LOCATION, ORIGIN AND DESIGN.

The College is beautifully situated on an elevation directly east and overlooking the young flourishing town of Pullman, in Whitman county.

Its location in the midst of the famous Palouse Valley gives it unusual advantages for agricultural and other experimental purposes.

Pullman is supplied with numerous artesian wells of pure water, is healthfully located and has an intellectual and enterprising population of fifteen hundred people. It is also readily accessible from different parts of the state by both the Union and Northern Pacific Railroads. Their stations being less than a mile from the College renders it an easy matter to reach the College or visit the experimental farm connected with it.

The Washington Agricultural College and School of Science was established by the legislature in two separate acts.

The first, that of 1889, created a commission to establish a State College. The purpose in view is clearly expressed in section 8 of this act:

"That all instruction given in the College shall, to the utmost practicable extent, be conveyed by means of practical work in the laboratory. Said commission shall provide *

* * one physical laboratory or more, one biological
