DATE: September 21, 197

FROM : Richard A. Wexler
Assistant Attorney General

PHONE: 296-5370

SUBJECT: Submission for Review and Approval of Department of Health Amendments to Rules Relating to the Use of X Ray Machines for Screening Purposes

Mike, enclosed are amendments adopted by the Commissioner of Health to Minn. Rule MHD 181 which would prohibit the use of x ray machines for screening purposes in the detection and evaluation of health conditions unless approved by the Commissioner. Screening has basically been defined as the use of x ray to detect various health conditions on a mass basis as opposed to having an individually ordered x ray by physician or other health professional. As you probably remember, it used to be quite common to screen large numbers of individuals with x ray for the detection of tuberculosis. This use of x ray has also been used to screen large numbers of people for other health conditions. However, as time has passed, numerous studies have been conducted which show that as a general rule screening by x ray is not a productive health detection device. In addition, many other screening methods have been devised which are as effective. Consequently, just about any advisory or professional group knowledgeable about x rays and the resultant exposure to radiation has recommended discontinuance of the use of x rays as screening devices. The primary underlying reason for that is the rule of thumb that all radiation exposure should be avoided unless in specific cases the health benefit outweighs the detriment of being exposed to radiation.

The rule does not prohibit the use of x rays for screening purposes. It merely requires an applicant desiring to run a screening program to obtain approval from the Commissioner of Health prior to conducting a screening program. The burden, of course, is on the applicant to show that there is a definite health need which cannot be met through alternative methods and which outweighs the detriment of exposing individuals to radiation. The bulk of the rule relates to the application process and information which must be submitted by the applicant. In addition, the rule provides for several different means for withdrawing the Commissioner's approval upon the finding of the existance of conditions which would result in serious over-exposure, discrepancies between the screening program as implemented and as described in the application, or for violation of the Department's existing rules relating to radiation.

You will quickly find out upon reviewing the material that the hearing was held quite some time ago, prior to the establishment of the Office of Hearing Examiners. Consequently the findings of fact are those of the Department only and the rules have not been submitted to the Office of Hearing Examiners for determination as to whether or not there were substantial changes. You may remember that I called you about this a month or so ago and you agreed that since the hearing was held prior to the establishment of the Hearing Examiner's Office that the rules should be submitted directly to you.

In terms of changes in the rules from the form initially submitted at hearing and the form approved by the Commissioner and submitted to you, it is the Department's position, which I agree in, that any changes are merely of a clarifying nature. For your information, the most noteworthy ones are specifically addressed in the findings of fact.

Along with five copies of the rule as initially adopted are included all of the supporting documents as well as the transcript and all exhibits submitted at the public hearing. Since the rules were approved by the Commissioner after the legislature abolished the State Board of Health, the certificate of board's adoption of rules resolution is necessarily not included in the documents.

If you have any questions concerning any aspect of the amendment to Minn. Rule MHD 181, please give me a call.

Amendment to Rule MHD 181

Relating to Ionizing Radiation

MHD 181-186 contained in Chapter Twenty-One of the rules of the Minnesota State Department of Health is hereby transferred to Chapter Twelve.

MHD 181 (b), Definitions, is amended by adding the following definitions:

Commissioner - The Commissioner of the Minnesota Department of Health.

Screening - The testing with x-ray machines of human beings or human population groups for the detection or evaluation of health conditions when such x-ray tests are not specifically and individually ordered by a licensed healing arts practitioner, legally authorized to order such x-ray tests, 1) for the purpose of diagnosis or treatment or 2) as part of a physical examination conducted by a licensed practitioner. Screening does not include research protocols utilizing x-ray procedures when such protocols are part of research projects 1) sponsored or financed by agencies of the federal government, 2) conducted by educational institutions training practitioners of the healing arts or 3) conducted in hospitals, when such research is authorized by or under control of the governing body of that hospital.

MHD 181 (h)(1), Prohibitions, is amended by adding subparagraph d. as follows:

d. The use of x-ray machines for the purpose of screening is prohibited without prior written approval of the Commissioner.

MHD 181 (h) is amended by changing the present subparagraph designation of MHD 181 (h)(2), Violations, to MHD 181 H.5. and by adding subparagraphs MHD 181 H.2., 3. and 4. as follows:

2. Commissioner Approval of Screening. Any person desiring Commissioner approval for screening purposes as specified in MHD 181 (h)(1)d. shall submit an application to the Commissioner requesting his permission to perform screening. The burden of justifying the requested screening rests on the applicant. Approval will be granted if the Commissioner is satisfied that:

a. The proposed screening is a justified public health measure;

b. The benefit derived from the proposed screening will outweigh the detriment of x-ray exposure; and

c. The x-ray screening will be conducted properly, safely, and legally, i.e., in accordance with all applicable statutes and rules of the State of Minnesota or federal government.

3. Content of Application for Approval of Screening. The application for approval of a screening program must contain the following information and data:

a. Name and Minnesota business address.

(1) If the applicant is a corporation or other business or non-business association, the name of the person representing the association shall be given.

(2) If the applicant's principal location or home office is not in Minnesota, the principal location or home office address shall be given as well as the name of the person who may be contacted by the Commissioner with respect to the application.

(3) If the applicant is a foreign corporation subject to the provisions of Minnesota Statute Chapter 303 it shall submit a certified copy of its Certificate of Authority issued by the Minnesota Secretary of State. The certification shall be dated no more than one month prior to the date of submission of the application to the Commissioner.

b. When and where the proposed screening is to be performed.

c. Description of the specific screening proposed.

d. Description of the age distribution of the population to be screened.

e. The amount of x-ray exposure to which individuals will be subjected by the proposed screening.

(1) Applications for screening for pulmonary (lung) conditions shall not be approved if the incident (skin entrance) x-ray exposure will exceed 50 milliroentgens per radiograph for the posterior-anterior (PA) view. Using normally accepted exposure techniques, a Victoreen R-chamber placed at a distance of 11 inches from the center of the film with a scatter phantom (Alderson "Rando" phantom or equivalent" positioned in front of the center of the film, or an equivalent method, shall be the method used for measuring the incident (skin entrance) exposure.

(2) Commonly accepted state-of-the-art techniques and equipment shall be the methods used for measuring x-ray exposure from other types of screening. A written description of the specific method used shall be submitted to the Commissioner. The amount of x-ray exposure shall be specified as skin entrance or film exposure and shall not exceed amounts normally given during such projections based on the studies "Population Exposure to X-Rays U.S. 1970" (DHEW Publication (FDA) 73-8047, November 1973)[1] and "National Evaluation of X-Ray Trends: Tabulation of Data for 'All States' for Period January 1, 1974 to December 31, 1974".[2]

f. Why the screening is being planned. A detailed statement shall specify the compelling health reasons, health benefits, or health emergency which justifies the radiation exposure to which individuals will be subjected by the proposed screening.

g. Who will interpret the x-ray film and to whom will the results, interpretation, or findings be sent.

1. The estimated mean exposure per film by type of radiographic examination specified in this publication is reproduced in Appendix A.
2. The weighted mean indexes by type of exam/projection specified in this publication are reproduced in Appendix B.

h. Where the x-ray film will be filed.

i. Who will have access to the x-ray film.

j. If the persons screened will not be given the x-ray film or will not be personally informed by the applicant of the results, interpretation or findings.

(1) How will this information be communicated to those individuals who have been screened.

(2) What arrangements will be made to assure that those persons who have been screened will be informed as to the need for further medical and health care evaluation or treatment.

k. Why alternate screening methods, not requiring use of x-ray machines, are not acceptable.

l. Who will conduct the screening (operators) and their qualifications, with complete information pertaining to the operators including their formal training and specifically describing any licenses, registration or other authority held from Minnesota or other state or federal agencies or professional associations.

m. Who will supervise the operators conducting the screening, with complete information pertaining to the supervisor's qualifications and specifically describing any licenses, registration or other authority held from Minnesota or other state or federal agencies or professional associations. The method of supervision shall be specified.

n. What equipment will be used in connection with the screening, and whether it complies with Minnesota law and regulations and whether such equipment has been inspected, licensed or approved in any other way by a Minnesota agency, or by any other state or federal agency.

o. Any other information requested by the Commissioner which he deems necessary

to enable him to determine whether or not the proposed x-ray exposure the subjects of the screening will receive is a justified public health measure, the benefit of which outweighs the potential detriment of x-ray exposure. The Commissioner may request the submission of additional information and data subsequent to the submission of the original application. The Commissioner may deny approval of any request to perform screening as specified in MHD 181 (h)(1)d. if the applicant fails to or refuses to submit all requested data.

4. Approval of Changes in Screening Program. It is the responsibility of the applicant to inform the Commissioner of any changes in its screening program from that which is described in the application and receive Commissioner approval of such changes prior to commencement of the screening program.

MHD 181 H.5., Violations, is amended as follows:

5. Violations.

a. General.[3] If in the opinion of the Commissioner, it is necessary to do so to protect persons from hazards of radiation, an injunction or other court order may be obtained prohibiting any violation of any provision of any regulation or order issued thereunder. Any person who willfully violates any provision of any regulation or order issued thereunder may be guilty of a crime, and, upon conviction, may be punished by fine or imprisonment or both, as provided by law.

b. Commissioner Approved Screening.

(1) The Commissioner or his representative may inspect the screening program while in progress to assure that it is being carried out as described in the

---

3. This subsection (i.e., MHD 181 H.5.a.) already exists in the rules and is not being amended except by being designated as subparagraph "a. General".

application and in compliance with Minnesota Rules MHD 181-186 relating to ionizing radiation.

(2) Approval may be withdrawn immediately if after an inspection the Commissioner finds the existence of conditions which would result in serious overexposure. All screening procedures shall be terminated immediately upon receipt of the written notice of existence of such overexposure. The applicant may request a contested case hearing within five days after receipt of the notice, provided, however, the request for hearing does not stay the Commissioner's order of immediate cessation of the screening program. The hearing shall be scheduled within ten days of receipt of the request for the hearing.

(3) Approval may be withdrawn if after an inspection the Commissioner finds discrepancies between the screening program as implemented and as described in the application or for violation of Minnesota Rules MHD 181-186 relating to ionizing radiation. A hearing shall be held if requested by the applicant within three days after the receipt of the notice of withdrawal of approval. The hearing may be held upon granting the applicant three days notice. If a hearing is requested, withdrawal of approval shall not take effect until a final order is issued by the Commissioner.

WARREN SPANNAUS, ATTORNEY GENERAL

BY /s/ Michael B. Miller

SPECIAL ASSISTANT ATTORNEY GENERAL

STATE OF MINNESOTA
DEPARTMENT OF STATE
FILED
NOV 4 1977
Joan Anderson Growe
Secretary of State

12:30 p.m.

APPLICATION OF THE PROPOSED AMENDMENT TO REGULATION 181

The proposed amendment of Regulation MHD 181 relating to ionizing radiation is intended to apply to mass x-ray screening of the general population. Patients admitted to a hospital for medical treatment have already submitted themselves to a physician's care. Consequently, chest x-rays administered upon admission to a hospital are not interpreted as screening for purposes of this regulation

ERRATA

Page 2 MHD 181 (h)(2)(ee)(i) should read:

(i) Applications for screening for pulmonary (lung) conditions shall not be approved if the incident (skin entrance) x-ray exposure will exceed 50 milliroentgens per radiograph for the posterior-anterior (PA) view. Using normally accepted exposure techniques, a Victoreen R-chamber placed at a distance of eleven (11) inches from the center of the film with a scatter phantom (Alderson "Rando" phantom or equivalent) positioned in front of the center of the film, or an equivalent method, shall be the method used for measuring the incident (skin entrance) exposure.

STATE OF MINNESOTA

COUNTY OF HENNEPIN

BEFORE THE MINNESOTA

STATE BOARD OF HEALTH

In the Matter of Proposed Amendments to MHD 181 Relating to the Limitation of the Use of X-Ray Machines in Screening for the Detection and Evaluation of Health Conditions

ORDER FOR HEARING

To effectively implement Minn. Stat. § 144.12 (1974), the Minnesota State Board of Health deems it necessary to consider adoption of the proposed amendment captioned above pursuant to the authority vested in it by the above-referenced statute.

NOW, THEREFORE, IT IS ORDERED this 9th day of September, 1975, that a public hearing on the proposed rules captioned above be held in the Board Room, Minnesota Health Department Building, 717 Delaware Street S.E., Minneapolis, Minnesota, on October 24, 1975, commencing at 9:00 A.M., and continuing until all representatives of associations or other interested groups or persons have had an opportunity to be heard.

IT IS FURTHER ORDERED that notice of said hearing be given to all representatives of associations or other interested groups or persons who have registered their names with the Secretary of State for that purpose and all persons who are presently members of the Minnesota Legislature.

STATE OF MINNESOTA

BOARD OF HEALTH

WARREN R. LAWSON, M.D.
Secretary and Executive Officer

STATE OF MINNESOTA

COUNTY OF HENNEPIN

BEFORE THE MINNESOTA

STATE BOARD OF HEALTH

In the Matter of Proposed Amendments to MHD 181 Relating to the Limitation of the Use of X-Ray Machines in Screening for the Detection and Evaluation of Health Conditions

NOTICE OF HEARING

Notice is hereby given that a public hearing will be held pursuant to Minn. Stat. § 15.0412 subd. 4 (1974), as amended by Minn. Laws 1975, ch. 380, in the above-entitled matter, in the Board Room, Minnesota Department of Health Building, 717 Delaware Street S.E., Minneapolis, Minnesota, on October 24, 1975, commencing at 9:00 A.M., and continuing until all representatives or other interested groups of persons have had an opportunity to be heard concerning adoption of the proposed amendment captioned above by submitting either oral or written data, statements, or arguments. Statements or briefs may be submitted without appearing at the hearing.

Under Minn. Stat. § 10A.01 subd. 11 (1974), any individual representing persons or associations attempting to influence administrative action, such as promulgation of these proposed amendments, must register with the State Ethics Commission as a lobbyist within five days of the commencement of such activity by the individual. The State Ethics Commission is located at 410 State Office Building, St. Paul, Minnesota 55155.

The Minnesota State Board of Health proposes to amend Minn. Rule MHD 181 (b), Definitions, and MHD 181 (h), Restrictions. The proposed amendments are attached hereto

and made a part hereof. Additional copies of the proposed amendments are now available and may be obtained by writing to the Minnesota Department of Health, Division of Environmental Health, Radiation Control Section, ATTN: Alice Dolezal, 717 Delaware Street S.E., Minneapolis, Minnesota 55440. Additional copies will be available at the door on the date of the hearing.

The proposed rules in MHD 181 (h)(2)(ee)(ii) adopt by reference two studies of the U.S. Department of Health, Education and Welfare entitled, "Population Exposure to X-Rays U.S. 1970" (DHEW Publication (FDA) 73-8047, November 1973) and "National Evaluation of X-Ray Trends: Tabulation of Data for 'All States' for Period January 1, 1974 to December 31, 1974." These studies are available for review at the Minnesota Department of Health Building, address as above, or may be obtained by writing to:

Public Information Officer HFX-25
Department of Health, Education & Welfare
Public Health Service
Food and Drug Administration
Bureau of Radiological Health
5600 Fisher Lane
Rockville, Maryland 20852

A copy of the procedural rules for the hearing is attached and made a part hereof.

Testimony or other evidence to be submitted for consideration should be pertinent to the matter at hand and may be presented either orally or in writing at the public hearing or by mailing a statement to the Secretary and Executive Officer of the Board at the Department of Health Building, address as above. If the person submitting a statement cannot be present to read his statement at the time of the hearing, the statement will be entered into the record. For those wishing to submit written statements or exhibits, it is requested that at least three (3) copies of such statement, exhibit or summary be furnished at the

hearing. The record will remain open for receipt of briefs or other written material relative to the proposed rules for twenty (20) days subsequent to the public hearing.

It is suggested that to save time and avoid duplication, those organizations or associations having a common viewpoint or interest in these proceedings join together where possible and present a single statement in behalf of such interests.

Dated: September 9th, 1975.

STATE OF MINNESOTA

BOARD OF HEALTH

WARREN R. LAWSON, M.D.
Secretary and Executive Officer

MINNESOTA STATE BOARD OF HEALTH

PROCEDURAL RULES FOR HEARING

The purpose of the hearing is to allow interested parties to express their views and present facts bearing upon the proposed regulations. So as to provide for an orderly presentation of evidence, the following rules will be in effect during the hearing specified in the attached Notice of Hearing:

1. Anyone wishing to be heard should indicate by signing the speaking sheet, listing his name, address, and the group which he represents. The speaking sheet will be available at the main entrance to the hearing room. It is requested that each group select one speaker only to present its views.

2. The first time the witness makes a statement he should spell his name and identify the group he is representing. Prior to making any subsequent statements he should state his name and the group which he represents. He may be sworn upon his request but it is not required. If he elects not to be sworn, that may be considered in determining the weight to be given to his testimony.

3. By giving testimony, a witness, including one who may also be a member of the panel, subjects himself to questioning by the panel. However, he is subject to cross-examination by non-members of the panel only if he affirmatively consents to being so examined. A refusal to be cross-examined may be considered in determining the weight to be given to his testimony.

4. All parties interested in introducing any written matter may do so by having it marked as an exhibit and then introduced for the record. Unsworn written matter may be received, but the fact that it is unsworn may be considered in determining the weight to be given it.

CERTIFICATE OF BOARD OF HEALTH'S

AUTHORIZING RESOLUTION

I, Warren R. Lawson, M.D., do hereby certify that I am presently the Commissioner of Health and formerly the Secretary and Executive Officer of the Minnesota State Board of Health, a board duly authorized under the laws of the State of Minnesota until it was abolished and all of its powers and duties transferred to the Commissioner of Health effective May 28, 1977, pursuant to Minn. Laws 1977, ch. 305, §§ 39, 44, 45, and 47, and that the following is a true, complete, and correct copy of a resolution adopted at a meeting of the said Board duly and properly called and held on the 8th day of August, 1974, that a quorum was present at said meeting; that a majority of those present voted for the resolution; that said resolution is set forth in the minutes of said meeting and has not been rescinded or modified.

> RESOLVED, that Warren R. Lawson, M.D., Secretary and Executive Officer of the Minnesota State Board of Health, be and he hereby is granted the authority and directed to call a hearing for the purpose of amending regulation MHD 181 of the Board of Health, such amendment relating to limiting or prohibiting the use of x-ray machines for screening of human beings for pulmonary health conditions, setting maximum x-ray exposure limits, and the transfer of x-ray records, as well as perform any and all acts incidental thereto, including but without being limited thereto, signing an order for hearing and notice of hearing as well as acting as or appointing a presiding officer for all hearings.

IN WITNESS WHEREOF, I have hereunto subscribed my name this 19th day of September, 1977.

STATE OF MINNESOTA

DEPARTMENT OF HEALTH

Warren R. Lawson

WARREN R. LAWSON, M.D.
Commissioner of Health

Amendment to Rule MHD 181

Relating to Ionizing Radiation

MHD 181-186 contained in Chapter Twenty-One of the rules of the Minnesota State Department of Health is hereby transferred to Chapter Twelve.

MHD 181 (b), Definitions, is amended by adding the following definitions:

Commissioner - The Commissioner of the Minnesota Department of Health.

Screening - The testing with x-ray machines of human beings or human population groups for the detection or evaluation of health conditions when such x-ray tests are not specifically and individually ordered by a licensed healing arts practitioner, legally authorized to order such x-ray tests, 1) for the purpose of diagnosis or treatment or 2) as part of a physical examination conducted by a licensed practitioner. Screening does not include research protocols utilizing x-ray procedures when such protocols are part of research projects 1) sponsored or financed by agencies of the federal government, 2) conducted by educational institutions training practitioners of the healing arts or 3) conducted in hospitals, when such research is authorized by or under control of the governing body of that hospital.

MHD 181 (h)(1), Prohibitions, is amended by adding subparagraph d. as follows:

d. The use of x-ray machines for the purpose of screening is prohibited without prior written approval of the Commissioner.

MHD 181 (h) is amended by changing the present subparagraph designation of MHD 181 (h)(2), Violations, to MHD 181 H.5. and by adding subparagraphs MHD 181 H.2., 3. and 4. as follows:

2. Commissioner Approval of Screening. Any person desiring Commissioner approval for screening purposes as specified in MHD 181 (h)(1)d. shall submit an application to the Commissioner requesting his permission to perform screening. The burden of justifying the requested screening rests on the applicant. Approval will be granted if the Commissioner is satisfied that:

a. The proposed screening is a justified public health measure;

b. The benefit derived from the proposed screening will outweigh the detriment of x-ray exposure; and

c. The x-ray screening will be conducted properly, safely, and legally, i.e., in accordance with all applicable statutes and rules of the State of Minnesota or federal government.

3. Content of Application for Approval of Screening. The application for approval of a screening program must contain the following information and data:

a. Name and Minnesota business address.

(1) If the applicant is a corporation or other business or non-business association, the name of the person representing the association shall be given.

(2) If the applicant's principal location or home office is not in Minnesota, the principal location or home office address shall be given as well as the name of the person who may be contacted by the Commissioner with respect to the application.

(3) If the applicant is a foreign corporation subject to the provisions of Minnesota Statute Chapter 303 it shall submit a certified copy of its Certificate of Authority issued by the Minnesota Secretary of State. The certification shall be dated no more than one month prior to the date of submission of the application to the Commissioner.

b. When and where the proposed screening is to be performed.

c. Description of the specific screening proposed.

d. Description of the age distribution of the population to be screened.

e. The amount of x-ray exposure to which individuals will be subjected by the proposed screening.

(1) Applications for screening for pulmonary (lung) conditions shall not be approved if the incident (skin entrance) x-ray exposure will exceed 50 milliroentgens per radiograph for the posterior-anterior (PA) view. Using normally accepted exposure techniques, a Victoreen R-chamber placed at a distance of 11 inches from the center of the film with a scatter phantom (Alderson "Rando" phantom or equivalent" positioned in front of the center of the film, or an equivalent method, shall be the method used for measuring the incident (skin entrance) exposure.

(2) Commonly accepted state-of-the-art techniques and equipment shall be the methods used for measuring x-ray exposure from other types of screening. A written description of the specific method used shall be submitted to the Commissioner. The amount of x-ray exposure shall be specified as skin entrance or film exposure and shall not exceed amounts normally given during such projections based on the studies "Population Exposure to X-Rays U.S. 1970" (DHEW Publication (FDA) 73-8047, November 1973) and "National Evaluation of X-Ray Trends: Tabulation of Data for 'All States' for Period January 1, 1974 to December 31, 1974".

f. Why the screening is being planned. A detailed statement shall specify the compelling health reasons, health benefits, or health emergency which justifies the radiation exposure to which individuals will be subjected by the proposed screening.

g. Who will interpret the x-ray film and to whom will the results, interpretation, or findings be sent.

h. Where the x-ray film will be filed.

i. Who will have access to the x-ray film.

j. If the persons screened will not be given the x-ray film or will not be personally informed by the applicant of the results, interpretation or findings:

(1) How will this information be communicated to those individuals who have been screened, and

(2) What arrangements will be made to assure that those persons who have been screened will be informed as to the need for further medical and health care evaluation or treatment.

k. Why alternate screening methods, not requiring use of x-ray machines, are not acceptable.

l. Who will conduct the screening (operators) and their qualifications, with complete information pertaining to the operators including their formal training and specifically describing any licenses, registration or other authority held from Minnesota or other state or federal agencies or professional associations.

m. Who will supervise the operators conducting the screening, with complete information pertaining to the supervisor's qualifications and specifically describing any licenses, registration or other authority held from Minnesota or other state or federal agencies or professional associations. The method of supervision shall be specified.

n. What equipment will be used in connection with the screening, and whether it complies with Minnesota law and regulations and whether such equipment has been inspected, licensed or approved in any other way by a Minnesota agency, or by any other state or federal agency.

o. Any other information requested by the Commissioner which he deems necessary

to enable him to determine whether or not the proposed x-ray exposure the subjects of the screening will receive is a justified public health measure, the benefit of which outweighs the potential detriment of x-ray exposure. The Commissioner may request the submission of additional information and data subsequent to the submission of the original application. The Commissioner may deny approval of any request to perform screening as specified in MHD 181 (h)(1)d. if the applicant fails to or refuses to submit all requested data.

4. Approval of Changes in Screening Program. It is the responsibility of the applicant to inform the Commissioner of any changes in its screening program from that which is described in the application and receive Commissioner approval of the changes prior to their implementation.

MHD 181 H.5., Violations, is amended as follows:

5. Violations.

a. General.* If in the opinion of the Commissioner, it is necessary to do so to protect persons from hazards of radiation, an injunction or other court order may be obtained prohibiting any violation of any provision of any regulation or order issued thereunder. Any person who willfully violates any provision of any regulation or order issued thereunder may be guilty of a crime, and, upon conviction, may be punished by fine or imprisonment or both, as provided by law.

b. Commissioner Approved Screening.

(1) The Commissioner or his representative may inspect the screening program while in progress to assure that it is being carried out as described in the

---

*This subsection (i.e., MHD 181 H.5.a.) already exists in the rules and is not being amended except by being designated as subparagraph "a. General".

application and in compliance with Minnesota Rules MHD 181-186 relating to ionizing radiation.

(2) Approval may be withdrawn immediately if after an inspection the Commissioner finds the existence of conditions which would result in serious overexposure. All screening procedures shall be terminated immediately upon receipt of the written notice of existence of such overexposure. The applicant may request a contested case hearing within five days after receipt of the notice, provided, however, the request for hearing does not stay the Commissioner's order of immediate cessation of the screening program. The hearing shall be scheduled within ten days of receipt of the request for the hearing.

(3) Approval may be withdrawn if after an inspection the Commissioner finds discrepancies between the screening program as implemented and as described in the application or for violation of Minnesota Rules MHD 181-186 relating to ionizing radiation. A hearing shall be held if requested by the applicant within three days after the receipt of the notice of withdrawal of approval. The hearing may be held upon granting the applicant three days notice. If a hearing is requested, withdrawal of approval shall not take effect until a final order is issued by the Commissioner.

Proposed Amendment to Regulation MHD 181
Relating to Ionizing Radiation

MHD 181-186 contained in Chapter Twenty-One of the Regulation of the Minnesota State Board of Health is hereby transferred to Chapter Twelve.

MHD 181 (b), Definitions, is amended by adding the following definition:

Screening - The testing with x-ray machines of human beings or human population groups for the detection or evaluation of health conditions when such x-ray tests are not specifically and individually ordered by a licensed healing arts practitioner, legally authorized to order such x-ray tests, for the purpose of diagnosis or treatment or as part of a physical examination conducted by a licensed practitioner.

MHD 181 (h)(1), Prohibitions, is amended by adding subparagraph (dd) as follows:

(dd) The use of x-ray machines for the purpose of screening is prohibited without prior written approval of the Board or its Secretary and Executive Officer.

MHD 181 (h) is amended by changing the present paragraph designation of MHD 181 (h)(2), Violations, to MHD 181 (h)(3) and by adding a new paragraph MHD 181 (h)(2), as follows:

(2) Board Approval of Screening. Any person desiring Board approval for screening purposes as specified in MHD 181 (h)(1)(dd) shall submit an application to the Board requesting its permission to perform screening. The burden of justifying the requested screening rests on the applicant. Approval will be granted if the Board or its Secretary and Executive Officer is satisfied, based upon the information submitted by the applicant and the information, advice and recommendation of the staff of the Minnesota Department of Health, that the proposed screening is a justified public health measure and that the benefit derived from the proposed screening will outweigh the detriment of x-ray exposure. It is the responsibility of the applicant to inform the Board of any changes in its screening program from that which is described in the application and receive Board approval of such changes prior to commencement of the screening program. The application must contain the following information and data:

(aa) Name and Minnesota business address.

(i) If the applicant is a corporation or other business or non-business association, the name of the person representing the association shall be given.

(ii) If the applicant's principal location or home office is not in Minnesota, the principal location or home office address shall be given as well as the name of the person who may be contacted by the Board with respect to the application.

(iii) If the applicant is a foreign corporation subject to the provisions of Minnesota Statute Chapter 303 it shall submit a certified copy of its Certificate of Authority issued by the Minnesota Secretary of State. The certification shall be dated no more than one month prior to the date of submission of the application

to the Board.

(bb) When and where the proposed screening is to be performed.

(cc) Description of the specific screening proposed.

(dd) Description of the age distribution of the population to be screened.

(ee) The amount of x-ray exposure to which individuals will be subjected by the proposed screening.

(i) Applications for screening for pulmonary (lung) conditions shall not be approved if the incident (skin entrance) x-ray exposure will exceed 50 milliroentgens per radiography for the posterior-anterior (PA) view. Using normally accepted exposure techniques, a Victoreen R-chamber placed at a distance of eleven (11) inches from the center of the film with a scatter phantom (Alderson "Rando" phantom or equivalent) positioned in front of the center of the film, or an equivalent method, shall be the method used for measuring the incident (skin entrance) exposure.

(ii) Commonly accepted state-of-the-art techniques and equipment shall be the methods used for measuring x-ray exposure from other types of screening. A written description of the specific method used shall be submitted to the Board. The amount of x-ray exposure shall be specified as skin entrance or film exposure and shall not exceed amounts normally given during such projections based on the nationally accepted studies of the U.S. Department of Health, Education and Welfare studies "Population Exposure to X-Rays U.S. 1970" (DHEW Publication (FDA) 73-8047, November 1973) and "National Evaluation of X-Ray Trends: Tabulation of Data for 'All States' for Period January 1, 1974 to December 31, 1974".

(ff) Why the screening is being planned. A detailed statement shall specify the compelling health reasons, health benefits, or health emergency which justifies the radiation exposure to which individuals will be subjected by the proposed screening.

(gg) Who will interpret the x-ray film and to whom will the results, interpretation, and findings be sent.

(hh) Where the x-ray film will be filed.

(ii) Who will have access to the x-ray film.

(jj) If the persons screened will not be given the x-ray film or will not be personally informed of the results, interpretation and findings by the applicant:

(i) What will be communicated to those individuals who have been screened.

(ii) What arrangements will be made to assure that those persons who have been screened will be informed as to the need for further medical and health care evaluation or treatment.

(kk) Why alternate screening methods, not requiring use of x-ray machines are not acceptable.

(ll) Any other information requested by the Board which it deems necessary to enable it to determine whether or not the proposed x-ray exposure the subjects of the screening will receive is a justified public health measure, the benefit of which outweighs the detriment of x-ray exposure. The Board may request the

submission of additional information and data subsequent to the submission of the original application. The Board may deny approval of any request to perform screening as specified in MHD 181 (h)(1)(dd) if the applicant fails to or refuses to submit all requested data.

MHD 181 (h)(3), Violations, is amended as follows:

(3) Violations.

(aa) General.* If in the opinion of the Board, it is necessary to do so to protect persons from hazards of radiation, an injunction or other court order may be obtained prohibiting any violation of any provision of any regulation or order issued thereunder. Any person who willfully violates any provision of any regulation or order issued thereunder may be guilty of a crime, and, upon conviction, may be punished by fine or imprisonment or both, as provided by law.

(bb) Board Approved Screening.

(i) The Board or its representative may inspect the screening program while in progress to assure that it is being carried out as described in the application and that Minnesota Rules MHD 181-186 relating to ionizing radiation are not being violated.

(ii) Approval may be withdrawn immediately if findings of the Board after an inspection indicate existence of a serious radiation hazard jeopardizing the health of persons in the vicinity of the screening program. All screening procedures shall be terminated immediately, upon receipt of the written notice of existence of a serious radiation hazard. The applicant may request a contested case hearing within five days after receipt of the notice, provided, however, the request for a hearing does not stay the Board's order of immediate cessation of the screening program. The hearing shall be scheduled within ten days of receipt of the request for the hearing.

(iii) Approval may be withdrawn if findings of the Board after an inspection indicate discrepancies between the screening program as implemented and as described in the application or for violation of Minnesota Rules MHD 181-186 relating to ionizing radiation. A hearing may be held if requested by the applicant within three days after the receipt of the notice of withdrawal of approval. The hearing may be held upon granting the applicant three days notice. If a hearing is requested, withdrawal of approval shall not take effect until a final order is issued by the Board.

---

*This section already exists in the rules and is not being amended except by being designated as subparagraph "(aa) General".

STATE OF MINNESOTA

COUNTY OF HENNEPIN

In the Matter of Proposed Amendments to MHD 181 Relating to the Limitation of the Use of X-Ray Machines in Screening for the Detection and Evaluation of Health Conditions

AFFIDAVIT OF MAILING

Gerald F. Wambach, being first duly sworn, deposes and says:

That on the 12th day of September, 1975, at the City of Minneapolis, County of Hennepin, State of Minnesota, he served the attached Notice of Hearing by depositing in the United States mail at said City of Minneapolis, a true and correct copy thereof, properly enveloped, with postage prepaid, to all persons and associations at the addresses listed on the Certificate of the Secretary of State, attached and made a part hereof as Exhibit A, to all persons and associations at the addresses listed on Exhibit B, attached and made a part hereof, as well as to all members of the Minnesota Legislature as of the date of mailing.

Gerald F. Wambach

Subscribed and sworn to before me this 12th day of September, 1975.

Christine A. Kuderka

CHRISTINE A. KUDERKA
Notary Public, Ramsey County, Mn.
My Commission Expires, Nov. 4, 1978

STATE OF MINNESOTA

COUNTY OF HENNEPIN

BEFORE THE MINNESOTA

STATE BOARD OF HEALTH

In the Matter of Proposed Amendments to MHD 181 Relating to the Limitation of the Use of X-Ray Machines in Screening for the Detection and Evaluation of Health Conditions

NOTICE OF HEARING

Notice is hereby given that a public hearing will be held pursuant to Minn. Stat. §§ 15.0412 subd. 4 (1974), as amended by Minn. Laws 1975, ch. 380, in the above-entitled matter, in the Board Room, Minnesota Department of Health Building, 717 Delaware Street S.E., Minneapolis, Minnesota, on October 24, 1975, commencing at 9:00 A.M., and continuing until all representatives or other interested groups of persons have had an opportunity to be heard concerning adoption of the proposed amendment captioned above by submitting either oral or written data, statements, or arguments. Statements or briefs may be submitted without appearing at the hearing.

Under Minn. Stat. §§ 10A.01 subd. 11 (1974), any individual representing persons or associations attempting to influence administrative action, such as promulgation of these proposed amendments, must register with the State Ethics Commission as a lobbyist within five days of the commencement of such activity by the individual. The State Ethics Commission is located at 410 State Office Building, St. Paul, Minnesota 55155.

The Minnesota State Board of Health proposes to amend Minn. Rule MHD 181 (b), Definitions, and MHD 181 (h), Restrictions. The proposed amendments are attached hereto and made a part hereof. Additional copies of the proposed amendments are now available and may be obtained by writing to the Minnesota Department of Health, Division of Environmental Health, Radiation Control Section, ATTN: Alice Dolezal, 717 Delaware Street S.E., Minneapolis, Minnesota 55440. Additional copies will be available at the door on the date of the hearing.

The proposed rules in MHD 181 (h)(2)(ee)(ii) adopt by reference two studies of the U.S. Department of Health, Education and Welfare entitled "Population Exposure to X-Rays U.S. 1970" (DHEW Publication (FDA) 73-8047, November 1973) and "National Evaluation of X-Ray Trends: Tabulation of Data for 'All States' for Period January 1, 1974 to December 31, 1974". These studies are available for review at the Minnesota Department of Health Building, address as above, or may be obtained by writing to: Public Information Officer HFX-25, Department of Health, Education and Welfare, Public Health Service, Food and Drug Administration, Bureau of Radiological Health, 5600 Fishers Lane, Rockville, Maryland 20852.

A copy of the procedural rules for the hearing is attached and made a part hereof.

Testimony or other evidence to be submitted for consideration should be pertinent to the matter at hand and may be presented either orally or in writing at the public hearing or by mailing a statement to the Secretary and Executive Officer of the Board at the Department of Health Building, address as above. If the person submitting a statement cannot be present to read his statement at the time of the

hearing, the statement will be entered into the record. For those wishing to submit written statements or exhibits, it is requested that at least three (3) copies of such statement, exhibit or summary be furnished at the hearing. The record will remain open for receipt of briefs or other written material relative to the proposed rules for twenty (20) days subsequent to the public hearing.

It is suggested that to save time and avoid duplication, those organizations or associations having a common viewpoint or interest in these proceedings join together where possible and present a single statement in behalf of such interests.

Dated: September 12, 1975

STATE OF MINNESOTA

BOARD OF HEALTH

/S/ WARREN R. LAWSON, M.D.
WARREN R. LAWSON, M.D.
Secretary and Executive Officer

MINNESOTA STATE BOARD OF HEALTH

PROCEDURAL RULES FOR HEARING

The purpose of the hearing is to allow interested parties to express their views and present facts bearing upon the proposed regulations. So as to provide for an orderly presentation of evidence, the following rules will be in effect during the hearing specified in the attached Notice of Hearing:

1. Anyone wishing to be heard should indicate by signing the speaking sheet, listing his name, address, and the group which he represents. The speaking sheet will be available at the main entrance to the hearing room. It is requested that each group select one speaker only to present its views.

2. The first time the witness makes a statement he should spell his name and identify the group he is representing. Prior to making any subsequent statements he should state his name and group which he represents. He may be sworn upon his request but it is not required. If he elects not to be sworn, that may be considered in determining the weight to be given to his testimony.

3. By giving testimony, a witness, including one who may also be a member of the panel, subjects himself to questioning by the panel. However, he is subject to cross-examination by non members of the panel only if he affirmatively consents to being so examined. A refusal to be cross-examined may be considered in determining the weight to be given to his testimony.

4. All parties interested in introducing any written matter may do so by having it marked as an exhibit and then introduced for the record. Unsworn written matter may be received, but the fact that it is unsworn may be considered in determining the weight to be given it.

Exhibit A

STATE OF MINNESOTA

COUNTY OF RAMSEY

In the Matter of Proposed Amendments to MHD 181 Relating to the Limitation of the Use of X-Ray Machines in Screening for the Detection and Evaluation of Health Conditions

CERTIFICATE

I hereby certify that the 437 general labels and list for the Minnesota State Health Department consisting of one page, all of which are attached and made a part hereof, constitute the complete lists of persons, associations, and other interested groups who as of 9:00 o'clock A.M., this 11th day of September, 1975, have requested pursuant to Minn. Stat. § 15.0412 subd. 4 (1974), as amended by Minn. Laws 1975, ch. 380, that their names be placed on file with the Secretary of State for the purpose of receiving notice of public hearing on proposed rules on the subject captioned above.

STATE BOARD OF HEALTH

In the Matter of Proposed
Amendments to MHD 181 Relating
to the Limitation of the Use of
X-Ray Machines in Screening for
the Detection and Evaluation of
Health Conditions

NOTICE OF HEARING

Notice is hereby given that a public hearing will be held pursuant to Minn. Stat. §§ 15.0412 subd. 4 (1974), as amended by Minn. Laws 1975, ch. 380, in the above-entitled matter, in the Board Room, Minnesota Department of Health Building, 717 Delaware Street S.E., Minneapolis, Minnesota, on October 24, 1975, commencing at 9:00 A.M., and continuing until all representatives or other interested groups of persons have had an opportunity to be heard concerning adoption of the proposed amendment captioned above by submitting either oral or written data, statements, or arguments. Statements or briefs may be submitted without appearing at the hearing.

Under Minn. Stat. §§ 10A.01 subd. 11 (1974), any individual representing persons or associations attempting to influence administrative action, such as promulgation of these proposed amendments, must register with the State Ethics Commission as a lobbyist within five days of the commencement of such activity by the individual. The State Ethics Commission is located at 410 State Office Building, St. Paul, Minnesota 55155.

The Minnesota State Board of Health proposes to amend Minn. Rule MHD 181 (b), Definitions, and MHD 181 (h), Restrictions. The proposed amendments are attached hereto and made a part hereof. Additional copies of the proposed amendments are now available and may be obtained by writing to the Minnesota Department of Health, Division of Environmental Health, Radiation Control Section, ATTN: Alice Dolezal, 717 Delaware Street S.E., Minneapolis, Minnesota 55440. Additional copies will be available at the door on the date of the hearing.

The proposed rules in MHD 181 (h)(2)(ee)(ii) adopt by reference two studies of the U.S. Department of Health, Education and Welfare entitled "Population Exposure to X-Rays U.S. 1970" (DHEW Publication (FDA) 73-8047, November 1973) and "National Evaluation of X-Ray Trends: Tabulation of Data for 'All States' for Period January 1, 1974 to December 31, 1974". These studies are available for review at the Minnesota Department of Health Building, address as above, or may be obtained by writing to: Public Information Officer HFX-25, Department of Health, Education and Welfare, Public Health Service, Food and Drug Administration, Bureau of Radiological Health, 5600 Fishers Lane, Rockville, Maryland 20852.

A copy of the procedural rules for the hearing is attached and made a part hereof.

Testimony or other evidence to be submitted for consideration should be pertinent to the matter at hand and may be presented either orally or in writing at the public hearing or by mailing a statement to the Secretary and Executive Officer of the Board at the Department of Health Building, address as above. If the person submitting a statement cannot be present to read his statement at the time of the

hearing, the statement will be entered into the record. For those wishing to submit written statements or exhibits, it is requested that at least three (3) copies of such statement, exhibit or summary be furnished at the hearing. The record will remain open for receipt of briefs or other written material relative to the proposed rules for twenty (20) days subsequent to the public hearing.

It is suggested that to save time and avoid duplication, those organizations or associations having a common viewpoint or interest in these proceedings join together where possible and present a single statement in behalf of such interests.

Dated: September 12, 1975

WARREN R. LAWSON, M.D.
Secretary and Executive Officer

MINNESOTA STATE BOARD OF HEALTH

PROCEDURAL RULES FOR HEARING

The purpose of the hearing is to allow interested parties to express their views and present facts bearing upon the proposed regulations. So as to provide for an orderly presentation of evidence, the following rules will be in effect during the hearing specified in the attached Notice of Hearing:

1. Anyone wishing to be heard should indicate by signing the speaking sheet, listing his name, address, and the group which he represents. The speaking sheet will be available at the main entrance to the hearing room. It is requested that each group select one speaker only to present its views.

2. The first time the witness makes a statement he should spell his name and identify the group he is representing. Prior to making any subsequent statements he should state his name and group which he represents. He may be sworn upon his request but it is not required. If he elects not to be sworn, that may be considered in determining the weight to be given to his testimony.

3. By giving testimony, a witness, including one who may also be a member of the panel, subjects himself to questioning by the panel. However, he is subject to cross-examination by non members of the panel only if he affirmatively consents to being so examined. A refusal to be cross-examined may be considered in determining the weight to be given to his testimony.

4. All parties interested in introducing any written matter may do so by having it marked as an exhibit and then introduced for the record. Unsworn written matter may be received, but the fact that it is unsworn may be considered in determining the weight to be given it.

STATE OF MINNESOTA

COUNTY OF HENNEPIN

BEFORE THE MINNESOTA

STATE BOARD OF HEALTH

In the Matter of Proposed Amendments to MHD 181 Relating to the Limitation of the Use of X-Ray Machines in Screening for the Detection and Evaluation of Health Conditions

STATEMENT OF NEED

The above-captioned rule is an amendment to existing rules of the State Board of Health. The last time the above-captioned rule was amended was in September, 1971. The statutory authority for this rule is Minn. Stat. § 144.12(15) (1974).

The need to adopt this regulation is based upon several factors. First, there is an increased concern about exposure of the population to ionizing radiation. Radiation exposure at any level is considered to involve some risk. Since there is a certain amount of radiation to which all people are exposed through their environment in addition to the exposure that is received through diagnostic or treatment x-rays ordered by a licensed healing arts practitioner, it is imperative to eliminate insofar as is practically possible all unnecessary exposures. Screening by x-ray is best known for its use in detecting tuberculosis. However, x-ray screening of the general population to discover this disease is no longer productive. The total number of new cases had decreased significantly since the screening program was initiated so that the radiation exposure is no longer justified. Of principle significance here, as with all other reasons

for x-ray screening, is that improvements in technology have resulted in the development of other diagnostic techniques for detecting adverse health conditions (not just limited to tuberculosis) which do not involve or greatly reduce radiation exposure.

The proposed amendments to MHD 181 (h) are needed at the present time to prevent the use of x-ray units, both mobile and stationary, from being utilized as a screening technique when other means of testing for health conditions are available which impose less potential risk to the individual unless there is a demonstrated health need for x-ray screening, the health benefits of which will outweigh the risks of radiation exposure. The proposed rule will protect the public from being exposed to unnecessary amounts of radiation from x-ray screening. This protection will result from the elimination of x-ray screening when it is not demonstrated to be beneficial to the public health. On the other hand, when screening is justified, the proposed amendment will assure that the radiation exposure will be the minimum necessary to achieve the screening goal.

NEWS RELEASE FROM THE MINNESOTA DEPARTMENT OF HEALTH

September 16, 1975 Contact: Bill Moore
FOR IMMEDIATE RELEASE (612) 296-5294

The State Board of Health has announced its intent to obtain the input of Minnesota residents as it considers the adoption of new rules in seven different subject areas and the amendment and revision of existing rules in five different areas.

Minnesotans interested in submitting data or views relating to the proposed adoption, amendment or revision of rules should address their written or oral comments to the Minnesota Department of Health, 717 S.E. Delaware St., Minneapolis 55440, through the contact persons listed below.

The proposed new rules relate to the following subjects:

* Implementing provisions of the Minnesota Clean Indoor Air Act; Kent Peterson, (612) 296-5365.

* Control and regulation of clinical laboratories; Dr. Henry Bauer, Division of Medical Laboratories, (612) 296-5241.

* Transfer of patient's x-ray records; Dr. Ellen Z. Fifer, Assistant Commissioner for Programs, (612) 296-5391.

* Distribution of monies to aid in construction of water filtration and purification plants and systems for communities using Lake Superior as a drinking water source; Frederick Heisel, Division of Environmental Health, (612) 296-5320.

* Implementing provisions of the Maternal and Child Nutrition Act of 1975; Dr. Ronald Campbell, Section of Maternal and Child Health, (612) 296-5265.

* Approval of laboratories performing bacteriological examinations of water; Russell Frazier, Analytical Services Section, (612) 296-5300.

- MORE -

* Establishment of application procedures for the credentialing of allied health manpower groups; Corrine Larson, Section of Allied Health Manpower, (612) 296-5393.

Amendments or revisions of existing rules are proposed in the following subject areas:

* Construction, equipment, maintenance, operation and licensing of nursing homes and boarding care homes, and the establishment of levels of assessments for violations of the regulations; H. Michael Tripple, Division of Health Facilities, (612) 296-5418 (effective Oct. 1).

* Construction, equipment, maintenance, operation and licensing of hospitals, and the establishment of levels of assessments for violations of the regulations; Janet Brodahl, Division of Health Facilities, (612) 296-5440.

* Morticians, funeral directors, and the disposition of the dead; Eugene Larson, Mortuary Science Unit, (612) 296-5491.

* Limitation of the use of x-ray machines in the screening for detection and evaluation of health conditions; Alice Dolezal, Division of Environmental Health, (612) 296-5323.

* Construction, equipment, maintenance, operation and licensure of supervised living facilities; Hans Larsen, Division of Health Facilities, (612) 296-5451.

Any materials submitted will be reviewed and considered by the Department of Health during the preparation of proposed rules, amendments or revisions. Notice of public hearings on proposed rules will be given to all interested parties, and any written materials submitted will become part of the hearing record.

Under state law, any individual representing persons or associations attempting to influence administrative action, such as the promulgation of these proposed rules, must register with the State Ethics Commission as a lobbyist within five days of the commencement of such activity.

Documentation for Amendment to Regulation MHD 181
Relating to Ionizing Radiation

The Minnesota Department of Health is concerned about eliminating unnecessary radiation exposure to Minnesota citizens. All ionizing radiation is considered as potentially hazardous. This is in accord with national and international radiation protection standards. Justification for permitting people to be exposed or deliberately exposing persons to ionizing radiation must be made in terms of benefit to the people so exposed. The International Commission of Radiological Protection states, "A basis of the Commission's recommendations is the cautious assumption that any exposure to radiation may carry some risk for the development of somatic effects, including leukemia and other malignancies and of hereditary effects. The assumption is made that down to the lowest levels of dose, the risk of inducing disease or disability increases with the dose accumulated by the individual. This assumption implies that there is no wholly 'safe' dose of radiation . . . However, in the absence of positive knowledge, the Commission believes that the policy of assuming a risk of injury at low doses is the most reasonable basis for radiation protection."[1] The National Council on Radiation Protection and Measurements has written "Dose limiting recommendations contain a criterion equivalent to requiring 'avoidance of appreciable bodily injury'. Necessary assumption of a non-threshold concept implies that some effect may occur at any dose."[2]

The National Academy of Sciences and the National Research Council in considering some principles underlying induction of somatic effects of exposure to radiation stated, "To specify numerically the risks of radiation effects under conditions of low-level exposure requires better knowledge than is now available of the mechanisms involved in the production of such effects, of their dose-response relationships, and of the susceptibility of human populations at risk. For none of the effects can the dose-response relationship be defined precisely over a wide range of dose and dose rate, and only for induction of certain types of effects, such as cataracts and impairment of fertility, are the mechanisms of induction known with some precision. For the most part, therefore, estimation of the risks of effects at low dose levels involves extrapolation observations at higher dose levels, based on assumptions about the nature of the dose-response relationship, the mechanisms involved, the susceptibility of the population at risk, and other factors"[3]

While exposure to radiation is assumed to entail a risk of deleterious effects, unless society wishes to dispense with activities involving exposure to ionizing radiation, it must recognize that there is a degree of risk and must limit the radiation dose to a level at which the risk is deemed to be acceptable to the individual and to society in view of the benefits derived from such activities. The Minnesota Department of Health is cognizant of potential benefits in the use of ionizing radiation, e.g., in medical diagnosis, and attempts to minimize the associated risk by eliminating unnecessary exposure. The U.S. Surgeon General has written in the Public Health Service booklet X-Ray Examinations . . . A Guide to Good Practice, ". . . there is an element of risk in human exposure to ionizing radiation. This has led to the widely accepted axiom that exposure should be given only when the potential benefit clearly outweighs the potential hazard, and that all unnecessary exposure should be avoided."[4] In the 1973 booklet, "We Want You to Know About Diagnostic X-Rays", the U.S. Food and Drug Administration wrote, "With the support of professional radiology and chest disease associations, FDA is discouraging the use of x-ray screening programs of the general population as

a means of detecting TB and other chest diseases. The primary reason is that these programs are not as effective as other detection techniques, and therefore result in unnecessary radiation exposure of a large segment of the population. When screening is called for, for example in a high tuberculosis incidence area, public health officials recommend the tuberculin skin test. If there is a positive reaction from the test, then it may be necessary to follow up with a chest x ray. Don't decide on your own to have a chest x ray as a precautionary measure. Have an x ray only when recommended by your physician."[5]

During the years of high tuberculosis incidence the use of x-ray examination for screening purposes was found to be justified by the discovery of many new cases each year. However, since that time the practice of exposing individuals to radiation for the purpose of detecting tuberculosis or other health conditions has come under serious question unless these tests are specifically and individually ordered by a licensed practitioner authorized to order such tests. In 1971 the National Tuberculosis and Respiratory Disease Association stated as part of its guideline that ". . . Community x-ray surveys using mobile or portable x-ray units among general population groups are not productive as a screening procedure for pulmonary disease and should be eliminated. In very special circumstances, such as in an apparent outbreak of tuberculosis or in a high incidence area which has no accessible walk-in facility, it may be appropriate to screen a selected population group with chest x-rays (along with tuberculin tests)."[6] In 1972 The Bureau of Radiological Health of the Food and Drug Administration stated, ". . . In regard to chest diseases other than tuberculosis, a Report of the Intersociety Commission for Heart Disease Resources published in January 1971 stated that mass chest x-ray screening for the detection of heart disease had not proven sufficiently rewarding to be recommended. Further, the yield is low when compared to the cost in radiation exposure, money, and time of trained medical personnel. Relatively few patients with previously unknown heart disease amenable to treatment are discovered in this way. The report added that radiologic screening may have a place in special circumstances where the incidence of curable or salvageable congenital or acquired heart disease is thought to be unusually high."[7] Also in 1972, the Assistant Secretary for Health and Scientific Affairs of the Department of Health, Education and Welfare wrote, "Community chest x-ray surveys among the general population for detection of other pulmonary disease or heart disease have not proven sufficiently rewarding and should not be done."[8]

Currently in some areas multiphasic x-ray screening is being performed on the public without individual physician prescriptions. For selected groups certain examinations may be warranted for screening. In these instances there must be a clear medical benefit for each individual being exposed to x rays. One of the types of screening that is being performed with increasing frequency is mammographic screening. The American College of Radiology and the Bureau of Radiological Health - FDA recommended in April, 1975 against x-ray examination of the breast for asymptomatic women under 35 years of age. Continued research is being conducted to determine whether the 35-50 age group can benefit by x-ray examination of this type.

Another multiphasic x-ray screening being performed is dental screening using a panographic dental x-ray machine. A Guide to Screening published by the U.S. Department of Health, Education, and Welfare in cooperation with the American

Academy of Pediatrics states that the purpose of screening for dental disease is to assure that persons requiring dental care are receiving it. To further explain dental screening A Guide to Screening concluded that the purpose of dental screening is not to identify dental disease, but rather to determine whether or not the individual is receiving regular dental care.[9] To avoid unnecessary irradiation dental x-ray screening should be performed only if the information of whether or not the individual is receiving regular dental care cannot be obtained by other means.

The most common and frequent type of x-ray exposure for screening is the chest x-ray. In accord with its efforts to eliminate unnecessary radiation exposure the Minnesota Department of Health set a maximum exposure limit for chest x-ray exposure. This maximum value was obtained after current studies were reviewed. One of the studies was performed by the X-Ray Science and Engineering Laboratory of Oregon State University under contract with the Bureau of Radiological Health (D.H.E.W.)[10]. This study shows that using normally accepted techniques and conventional equipment in good repair, a large patient (28 cm in thickness) would receive a skin entrance exposure of 28 mR for a posterior-anterior (PA) view. The National Evaluation of X-Ray Trends data based on measurements provided by the States has shown for the year 1974 that the median exposure at skin entrance for a posterior-anterior exposure of a 23 cm thick person is 20 mR.[11] In the 1970 Public Health Service study Population Exposure to X-Rays the mean estimated exposure per film for a radiographic chest examination was 44 mR at skin entrance.[12] Since the value from the 1970 PHS study is a mean estimate rather than a median value such as that in the N.E.X.T. study, a few inordinately large exposure values may have unduly influenced the estimated exposure per film. Nevertheless, the upper limit of 50 mR per exposure at skin entrance for a chest x-ray was set sufficiently high to allow for technique, screen and grid variations which may have caused some of the higher exposure values during the 1970 Public Health Service Study.

Upper limit exposure values for x-ray screening other than chest x-ray have not been specified. Variations of equipment and techniques are significant. It is difficult to specify a precise number as the maximum value. However, experience and actual field data have been utilized in performing nationally recognized studies. The numbers listed as exposure values for each projection or view represent commonly recognized exposures utilizing currently accepted equipment and techniques. At this time there are no widely accepted studies for projections other than the chest on which laboratory studies for optimum procedures and conditions have been performed. Consequently the values from commonly accepted national studies must serve as a guide. The studies selected for purposes of this regulation are the Public Health Service study Population Exposure to X-Rays in U.S. 1970[13] and "Nationwide Evaluation of X-Ray Trends"[14] These two studies were chosen because of the extensive research which was conducted to make these studies accurate and comprehensive.

Besides dealing with upper limit exposure values for x-ray screening, the proposed rule requires the submission of an application containing all the information which the Board will need in order to make a decision as to whether the proposed screening is a justified public health measure and that the benefit derived from the proposed screening will outweigh the detriment of x-ray exposure. In order to make a reasonable and informed decision, it is

important for the Board to know not only why the screening is proposed but what will be done with the information that is obtained from the screening program. Obviously, if the information is not communicated in a meaningful way to the persons being screened or their health professionals so that effective follow-up procedures could be commenced for those for which the screening so indicated, the screening program could not be justified as a beneficial public health measure.

When a serious radiation hazard exists jeopardizing the health of persons in the vicinity of the screening program, the Board inspector will give notice for immediate cessation of the program to the applicant. The hazard may be due to malfunction of the x-ray unit, improper operating techniques, or insufficient shielding around the x-ray room. Immediate cessation of the program when a radiation hazard exists is necessary for the radiation protection of the patient, the operators, and the public who may be in the waiting room or vicinity. As the references on the attahced sheet indicate, serious harm to individuals can result within a short period of time if there is large exposure to x-ray radiation.

In addition, the proposed rule provides for the withdrawal of Board approval upon finding after an inspection that discrepancies exist between the screening program as implemented and as described in the application or for violation of Minnesota Rules MHD 181-185 relating to ionizing radiation. Withdrawal of approval will take effect three days after the applicant receives notice of the withdrawal unless a hearing is requested in that period of time. The hearing can be held three days after the request for it. These relatively short notice periods are necessary since most screening programs are completed within an extremely short period of time.

It has become increasingly clear that in safeguarding the public health in the area of radiation protection, it is not sufficient to provide adequate equipment. Individuals must be protected from unnecessary irradiation resulting from nonbenficial x-ray examination. The amendment to MHD 181 accomplishes this by reserving x-ray screening to those population groups where the benefit clearly outweighs the risk. This in no way restricts an individual licensed practitioner from prescribing those x-ray examinations for his patient that he deems necessary.

STATE OF MINNESOTA

COUNTY OF HENNEPIN

BEFORE THE MINNESOTA

COMMISSIONER OF HEALTH

In the Matter of the Proposed Amendments to MHD 181 Relating to the Limitation of the Use of X-Ray Machines in Screening for the Detection and Evaluation of Health Conditions

ORDER ADOPTING RULES

The above-entitled matter came on for hearing before the Minnesota Commissioner of Health (hereinafter "Commissioner") on the 24th day of October, 1975, at 9:00 a.m. in the Board Room, Minnesota Department of Health Building, 717 Delaware Street S.E., Minneapolis, Minnesota 55440, after proper notice required by Minn. Stat. § 15.0412 (Supp. 1975) was served upon all persons, associations and other interested groups registered with the Secretary of State for that purpose.

After affording interested persons an opportunity to present written and oral data, statements and arguments, and having heard and considered all of the testimony and evidence adduced and upon the records, files and proceedings herein, and applicable statutory standards or criteria, and having confirmed the need for the above-captioned rules.

NOW, THEREFORE, IT IS ORDERED that these amendments to MHD 181(b) and (h) relating to the limitation of the use of x-ray machines in screening for the detection and evaluation of health conditions are adopted this 19th day of September, 1977, pursuant to authority vested in me by Minn. Stat. § 144.12 subd. 1 (1976).

STATE OF MINNESOTA

DEPARTMENT OF HEALTH

WARREN R. LAWSON, M.D.
Commissioner of Health

STATE OF MINNESOTA

COUNTY OF HENNEPIN

BEFORE THE MINNESOTA

COMMISSIONER OF HEALTH

In the Matter of the Proposed Amendments to MHD 181 Relating to the Limitation of the Use of X-Ray Machines in Screening for the Detection and Evaluation of Health Conditions

FINDINGS OF FACT

The above-entitled matter came on for hearing before the Minnesota Commissioner of Health (hereinafter the "Commissioner") */ on the 24th day of October, 1975, at approximately 9:00 a.m., in the Board Room, Minnesota Department of Health Building, 717 Delaware Street Southeast, Minneapolis, Minnesota 55440, after proper notice required by Minn. Stat. § 15.0412 (1976) was served upon all persons, associations and other interested groups registered with the Secretary of State for that purpose and also upon other persons, associations and groups of which the Commissioner was aware of as possibly having an interest in the above-captioned rules.

After affording interested persons an opportunity to present written and oral data, statements and arguments, and having heard and considered all of the testimony and evidence adduced and upon the records, files and proceedings herein, the Commissioner makes and enters the following findings:

1. The basic intent of the amendment to MHD 181 is to prohibit the use of x-ray machines for the purpose of screening, as defined in the rule, unless the person or group desiring to use an x-ray machine receives prior written approval from the Commissioner. Approval will be granted if it is determined that the proposed screening is a justified public health measure, the benefit derived from the proposed screening will outweigh the detriment of exposure to x rays, and the proposed screening meets all other applicable laws for the use of x-ray machines. Healing arts practitioners when ordering x rays for specified individuals and specified research projects are excluded from the definition of screening.

---

*/ These proceedings to consider the amendments to MHD 181 were initiated by the State Board of Health. However, the 1977 Legislature abolished the Board and transferred all of its powers and duties to the Commissioner of Health. Minn. Laws 1977, ch. 305 §§ 39, 44, 45, 47. Consequently, these Findings are the Commissioner's and not the Board's.

2. The specific statutory authority which entitles the Commissioner to adopt these rules is contained in Minn. Stat. § 144.12 subd. 1(15) (1976) which authorizes the Commissioner to adopt reasonable rules " . . . for the preservation of the public health," which may include the control, " . . . by taking out of licenses or permits, or by other appropriate means, . . . (15) Sources of radiation . . . ."

3. The need to adopt this regulation is based upon primarily two factors. First, there is an increased concern about exposure of the population to ionizing radiation. Radiation exposure at any level is considered to involve some risk. Since there is a certain amount of radiation to which all people are exposed through their environment, in addition to the exposure that is received through diagnostic or treatment x rays ordered by a licensed healing arts practitioner, it is imperative to eliminate all unnecessary exposures insofar as is practically possible. Secondly, improvements in technology have resulted in the development of other diagnostic techniques for detecting adverse health conditions (not just limited to tuberculosis) which do not involve or greatly reduce radiation exposure. (Statement of Need, MHD Exhibit 6.)

4. Based upon the factors listed in paragraph 3 herein, the amendments to MHD 181 are needed to prevent the use of x-ray units from being utilized for screening purposes when other means of testing for health conditions are available which impose less potential risk to the individual and when the potential benefit from screening does not outweigh the detriment of x-ray exposure. On the other hand, when screening is justified, the amendment will assure that the radiation exposure will be the minimum necessary to achieve the screening goal. (MHD Exhibit 6.)

5. The purpose of this rule to restrict the use of x rays for mass screening purposes is in accord with the views expressed by the International Commission of Radiological Protection that there is no wholly safe radiation dose:

> A basis of the Commission's recommendations is the cautious assumption that any exposure to radiation may carry some risk for the development of somatic effects, including leukemia and other malignancies and of hereditary effects. The assumption is made that down to the lowest levels of dose, the risk of inducing disease or disability increases with the dose accumulated by the individual. This assumption implies that there is no wholly "safe" dose of radiation . . . . [t] he Commission believes that the policy of assuming a risk of injury at low doses is the most reasonable basis for radiation protection.

"Recommendations of the International Commission of Radiological Protection (Adopted September 17, 1965)," p. 6, (29). (MHD Exhibit 10, reference 1.)

6. During the years of high tuberculosis incidence, the use of x-ray examinations for screening purposes was found to be justified by the discovery of many new cases each year. However, since that time numerous medical authorities and federal health-related governmental agencies have concluded that community chest x rays as a screening procedure among the general population for detection of tuberculosis, heart disease, and other pulmonary disease have not proven sufficiently rewarding and should not be done unless these tests are specifically and individually ordered by a licensed practitioner authorized to order such tests. In light of the recent research which has revealed the possible risk involved in any exposure to radiation and in light of the fact that x rays are no longer productive as a screening technique for tuberculosis and other diseases, exposure should be given only when the potential benefit clearly outweighs the potential hazard. All unnecessary exposure should be avoided. (T. at 44, l. 13 to T. at 47, l. 13; Exhibits 10, 14 and 19.)

7. The public can best be protected from radiation exposure by reducing x-ray exposure. Considering only genetic doses and looking at the total contribution from all radiation sources, half the genetic dose to the population is contributed by natural background radiation, 30-40 percent is contributed by medical and dental x rays and only ten percent is from nuclear reactors, fall-out and other man-made sources. The most significant reduction in exposure to the population therefore can be accomplished by the elimination of x-ray examinations which are not medically indicated. (MHD Exhibit 21.)

8. The definition of screening as originally proposed has been modified slightly to clarify that it does not include research projects conducted under specified conditions. See Exhibit 13. The main thrust of this rule was aimed at controlling screening of the general public or special groups of people in a non-medical setting. Research projects carried out in a medical or medical training environment and/or under appropriate medical authorization, control and protocols was not within the original intent and scope of the rule thus justifying the clarifying modification made to the definition of screening.

9. Approval to conduct a screening program is obtained from the Commissioner by submitting an application which demonstrates that the criteria for approval as specified in MHD 181(h)(2) will be met. The criteria for approval contained in MHD 181(h)(2)(aa) and (bb) express the very reasons why this rule has been adopted. See paragraphs 3 through 7 herein. The basic premise is that any x-ray exposure is potentially hazardous. However, there are certain circumstances in

which the use of x ray is justified since the medical benefit to each person will outweigh the detriment of exposure. But demonstrating that the benefits of x ray outweigh the detriments is insufficient alone to justify approval of a screening proposal. The screening must also be a justified public health measure. These are basic nationally recognized standards for conducting screening programs. (MHD Exhibit 10.)

10. A third criteria for approval was added (MHD 181(h)(2)(cc)) as a result of letters received both before and after the hearing and as a result of testimony given at the hearing. (Exhibit 12; Letter of November 10, 1975, from Arthur Gillen to Hearing Officer David Giese; T. at 14, l. 25 to T. at 18, l. 6.) Other laws relate to the operation and maintenance of x-ray machines such as MHD 181-185. In addition, under Minnesota licensing statutes, only Minnesota licensed practitioners of the healing arts or certain specified individuals under their supervision may operate the machines and take x rays. The provision of MHD 181(h)(2)(cc) assures that all Minnesota laws relating to the taking of x rays and the operation of the x-ray machines will be complied with as part of the screening program. The rule also assures that those personnel operating the x-ray machines who are not required by Minnesota law to be licensed or otherwise credentialed are pursuant to MHD 181(h)(1)(cc) properly trained and qualified to take x rays safely and properly which are basic factors in protecting those who are the subject of x-ray examination.

11. The rule requires the submission of an application. The information which the rule requires to be included in the application is all geared to enable the Commissioner to determine whether the applicant will meet the approval criteria of MHD 181(h)(2)(aa) through (cc). The application directs the applicant to address not only why the screening is proposed but also what will be done with the information obtained about each person as a result of the screening. The latter aspect is just as significant as the former factor in determining whether the proposed program is justified as a beneficial public health measure since if the information obtained by screening is not meaningfully communicated to the persons being screened or their designated health professionals, no effective follow-up or treatment procedures could be commenced rendering the screening worthless. (MHD Exhibit 10.) MHD 181(h)(3)(ll), (mm) and (nn) were added as a result of and are a natural consequence of the addition of MHD 181(h)(2)(cc).

12. Applicants must demonstrate for chest x-ray screening that incident (skin entrance) x-ray exposure will not exceed 50 milliroentgens (mR) per radiograph for the posterior-anterior (PA) view. The method specified for determining the incident exposure is a commonly used method although the rule does permit use of equivalent methods as long as the applicant can demonstrate that the method is as accurate as the one specified in the rule. The 50 mR limit is based upon several studies which demonstrate that if normally accepted x-ray techniques and conventional equipment in good repair are used, there would not be any difficulty in meeting the 50 mR limit. (MHD Exhibit 10 at 3, references 10, 11, and 12.)

13. No maximum limit has been specified in the rule for non-chest x-ray screening because of the significant differences in equipment and techniques used for non-chest x-rays. Additionally, no nationally accepted studies have been performed for non-chest x-rays which suggest upper exposure limits with optimum procedures and conditions. However, nationally recognized surveys have been performed which list the x-ray exposure commonly accepted within x-ray practice using currently accepted equipment and techniques. These surveys have been adopted by reference. The exposure levels specified therein constitute the limits which must be met by a non-chest screening program applicant. This is reasonable since the limits are no more stringent than what occurs in actual practice. (MHD Exhibit 10.)

14. The rule provides for withdrawal of Commissioner approval resulting in cessation of the operation of the screening program. Such withdrawal can occur under two circumstances.

a. First, approval may be withdrawn immediately if the Commissioner determines upon inspection that a serious radiation hazard exists jeopardizing the health of persons in the vicinity of the screening. Immediate cessation of the program is necessary if conditions warrant since serious harm to individuals can result within a short period of exposure to a large amount of x-ray radiation. Appropriate safeguards are built in by authorizing a contested case hearing, if requested by the screening program sponsor, within 10 days of receipt of the request therefor. (MHD Exhibit 10 at 4.)

b. Second, approval can be withdrawn after a hearing for failure to implement the program as described in the application and for violation of MHD 181-185 relating to ionizing radiation. The withdrawal will take effect three days after the screening program sponsor receives notices to that effect unless the sponsor requests a hearing within that period of time. The hearing may be held upon three days notice to the sponsor. These short time periods are justified since most screening programs are completed within an extremely short period of time. An attempt to withdraw approval if longer time periods were specified would be meaningless as most screening programs would be completed before the hearing could be held. (MHD Exhibit 10 at 4.)

15. Other provisions of the regulations not specifically referred to herein are found to be supported by the evidence, are justified and reasonable and relate logically to the purpose and intent of the rule.

16. Many comments and suggested amendments were made at the hearing or submitted in written form. Based thereon, the Commissioner made some modifications, many of which are specifically addressed above. In addition, some other changes were made to the proposed rules which were strictly minor in nature and designed solely to clarify the meaning of the rule as proposed. None of the changes are of a significant nature and do not amend the rules in any substantive manner. Any suggested changes not implemented in the rules as adopted were rejected on the basis that they either were contrary to the rule's purpose and intent or did not materially improve or clarify the rule.

17. All procedural and substantive requirements have been met.

18. The final proposed amendment as adopted will assure that the policies of Minn. Stat. § 144.12 (1976) will be fulfilled. The protection of the public health and welfare requires that exposure to radiation be restricted to those situations where the benefits of the x rays clearly outweigh the risk of exposure. The amendment to MHD 181 will accomplish this purpose in an orderly and reasonable manner.

Dated: September 19, 1977.

Commissioner of Health

STATEMENT OF COMPLIANCE WITH

MANUAL OF RULE MAKING PROCEDURES

I, Assistant Attorney General Richard A. Wexler, do hereby declare that I have examined the proposed amendments to MHD 181(b) and (h) relating to the limitation of the use of x-ray machines in screening for the detection and evaluation of health conditions and all related documents and that, based on them and my personal familiarity with the applicable procedures, the Manual of Rule Making Procedures has been followed.

Dated: September 21, 1977.

RICHARD A. WEXLER
Assistant Attorney General
