

NEW! EFFECTIVE PAIN RELIEF

Scrambler Therapy® Technology for Chronic Neuropathic and Cancer Pain

Scrambler Therapy® ST-5A Technology is an electroanalgesia device that uses a biophysical (rather than biochemical) approach to treat chronic pain.

It transmits a “no pain” message to the surface receptors via disposable electrodes remodeling the pain system to convey a message of “no pain” to the central nervous system.

Suitable for patients with chronic neuropathic or cancer pain, including those with pain resistance to other treatments.

80-90% Effective Rate

No Adverse Side Effects

Non-Invasive, Non-Opioid

New England Journal of Medicine (NEJM)
“80-90% of patients have a favorable response.”

Johns Hopkins Medicine
says, “It’s effective, it’s non-invasive, it reduces opioid use substantially and it can be permanent.”

TECHNOLOGY OVERVIEW

How It Works

Scrambler Therapy® Technology, the ST-5A Medical Device, employs five artificial neurons connected to electrodes to treat multiple pain areas simultaneously. By overriding the pain signal with a “no pain” signal to the brain, it scrambles (recodes) the neurons, reducing the patient’s pain level to zero regardless of the initial pain intensity and type.

Indications for Use:

- ✓ Chemotherapy-induced Peripheral Neuropathy (CIPN)
- ✓ Chronic Cancer Pain
- ✓ Chronic Neuropathic Pain
- ✓ Failed Back Surgery Syndrome (FBSS)
- ✓ Sciatic and Lumbar Pain
- ✓ Postherpetic Neuralgia (PHN)
- ✓ Brachial Plexus Neuropathy
- ✓ Low Back Pain (LBP)
- ✓ Chronic Neuropathic Pain Opioid Addiction

MEDICAL

Protocol

The treatment protocol typically includes 10 consecutive sessions over two weeks, lasting about 45 minutes each. Booster cycles are provided as needed.

Location

The treatment is conducted in a physician’s office or an ambulatory care facility. More than 80 facilities in the U.S. and counting have a Scrambler Therapy unit.

More Information

FDA Cleared: Scrambler Therapy® Technology ST-5A Medical Device

Some insurers pay adequately for Scrambler Therapy® treatment. Recommended cost is \$300 per session. One patient/month will generate a positive cash flow.
