Decomposing Fractions

When decomposing fractions, you are just Breaking It Down into smaller units.

- 1) Identify the denominator.

$$2\frac{4}{5}$$

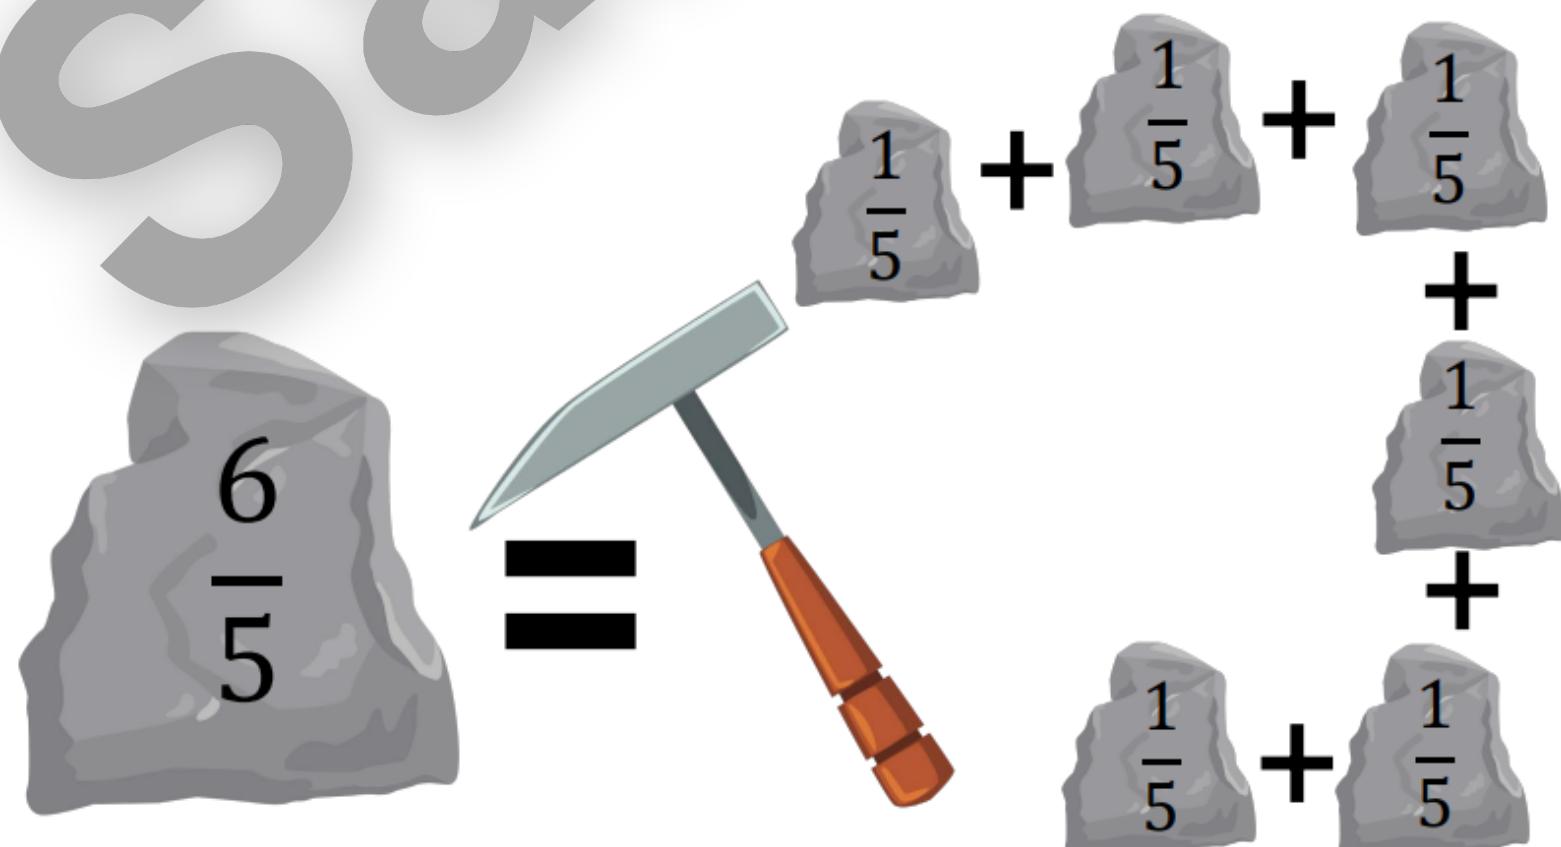

- 2) Break down the fraction into unit fractions.

$$\frac{4}{5} = \frac{2}{5} + \frac{2}{5} \text{ OR } \frac{4}{5} = \frac{1}{5} + \frac{1}{5} + \frac{1}{5} + \frac{1}{5}$$

- 3) If you have a whole number, turn it into a fraction.

$$2 = 1 + 1 = \frac{5}{5} + \frac{5}{5} = \frac{10}{5} = \frac{2}{5} + \frac{8}{5}$$

You can decompose improper fractions too!

Metric Conversions

The metric system is a decimal system of measurement. To convert metric units, multiply or divide by powers of 10.
