

Feature Update July 2022

Enhancements:

- Made the site page header floating.
- Made the “save” button on the edit permit page floating.
- Increased the size of the toggle that hid the left sidebar.
- Added a button to allow you to open a site map directly from an inspection.

Bug Fixes:

- Fixed a bug that took you to a white screen when you deleted photos you were adding to an action item.
- Fixed a bug that caused action item certification language to appear incorrectly on closed action items. This fixed all previously affected action items as well.
- Fixed an issue that made you have to double click the “+” to add a person to a site or organization.
- Fixed a login issue that caused some users who had entered their username or password incorrectly to see a loading circle instead of the message “invalid username/password”.
- Fixed an issue that caused the weather information on the site page to not update when you switched sites. This issue did not affect the weather information on the inspection reports.
- Fixed an issue that caused an error when trying to add a note to an inspection.
- Fixed a display issues that caused the inspections calendar to display incorrectly on mobile.
