

Feature Update October 2023

New Features:

1. Added a page to create dropdown options for titles and descriptions on prescribed action items.
2. Added a seven day forecast complete with automatic archiving.

Enhancements:

- When adding an attachment to an inspection, changed the “Add Photo” link to “Add File” to better represent the support file types.
- Added an indicator to show the required fields when closing an action item.
- Added new document dropdown options.

Bug Fixes:

- Corrected an issue that prevented the weather totals on the site page from updating when switching sites.
- Fixed an issue that could cause an error when trying to view/download an inspection report.
- Fixed an issue that would cause the header to not respond when hiding or showing the left navigation.
- Corrected an issue that could cause the inspections calendar to not update when making changes to inspection or action item target dates.
- Fixed a few capitalization issues on various pages.
- Fixed an issue that would incorrectly limit the number of inspectors that would display on the inspections calendar list.
- Added the site name to the top of a site’s inspection history, which was incorrectly left out.
