

COMPLIANCEGO

Stormwater Inspection Software

ComplianceGo is the first and only software to put your storm water compliance program into one place, including template form creation plus management with replicated outputs, and removing action item signoff barriers while connecting the most precise, site-specific weather data from NOAA and the National Weather Service. ComplianceGo builds consistency, confidence, can-do attitudes, and trust while putting your program on offense.

ENHANCEMENTS

BUG FIXES

- Fixed an issue that could cause MS4 scheduled inspections to not assign correctly.
- Fixed an issue that could cause column headers in tables to not display if there was no header in the first column.
- Fixed an issue could cause the site contact phone number to overlap with the QR code on the view-only print out if there was no site contact user.
- Fixed an issue that could prevent late inspection notifications from sending out.
