

# COMPLIANCEGO

## Stormwater Inspection Software

ComplianceGo has added pre-expiration notifications, allowing users to be alerted before inspections are missed based on customizable timeframes. Enhancements include support for simultaneous inspections by multiple users and cleaner UI on view-only pages. Several bugs were fixed to improve stability, including issues with pending inspections display, photo metadata accuracy, and table formatting in forms and reports. Additional fixes addressed dashboard navigation, scroll bar visibility, and error handling in inspection assignments.

### ENHANCEMENTS

- Hid the inspections calendar link on the view-only version of the site page.
- Add an option when assigning a form to a site that allows multiple inspectors to conduct simultaneous inspections.

### BUG FIXES

- Fixed pending inspections not displaying correctly when toggling between MS4 and Company views.
- Corrected misaligned trash can icon on added table rows.
- Removed a non-functional "Reset to Default" button from the "View Inspection" page.
- Fixed missing side scroll bar on the action log report.
- Resolved white screen issue when entering sites via map pins from different child orgs.
- Fixed incorrect photo metadata timestamps during inspections.
- Fixed table rows not displaying properly when editing forms until saved and refreshed.
- Resolved table settings carrying over incorrectly when adding new tables during form edits.
- Fixed occasional errors when deleting or updating site inspection assignments.

### FEATURES

- Added configurable Pre-Expiration Notifications for inspections, allowing alerts a set number of days before an inspection is missed and/or after the last completed inspection of that type.
