

# The **Weight** of Leadership

*Trust, Judgment, and Accountability  
When AI Speeds Up Decisions*

Dora Boussias  
Keynote Speaker | Executive & Strategic Advisor

As AI accelerates decisions  
across your organization,  
what is happening to  
**judgment**, ownership, and  
consequence?

Speed changes outcomes.

It also reshapes how leaders decide.

Which decisions are you quietly allowing AI to make that still require human judgment and accountability?

Automation moves fast.  
Accountability does not.

When AI surfaces insights and recommendations, what tells you which signals deserve **trust** and which to challenge?

Data reveals patterns.

Judgment determines meaning.

As decisions move faster and stakes rise, what kind of leader are your choices shaping you to become?

Speed is visible.

Judgment is remembered.

These are not questions leaders should carry alone.

## About Dora Boussias

Dora Boussias is a keynote speaker and executive & strategic advisor with 30 years of real-world experience across enterprise data, AI, and large-scale transformation.

Leaders turn to her as a trusted partner when transformation is underway and judgment, trust, and credibility are on the line. Through advisory, speaking, and curated leadership experiences, she helps leaders and organizations navigate AI-driven change, align decision-makers, and translate major investments into sustained momentum when it matters most.

If this brief surfaced questions worth exploring, those questions deserve space and attention.
