

# 3

## PERMACULTURE ETHICS

### EARTH CARE

Take care of the planet that feeds you.

- Building soil, not depleting it
- Protecting water, air, and biodiversity
- Mimicking natural systems rather than forcing control

### PEOPLE CARE

Healthy systems support healthy people.

- Grow food that nourishes
- Build communities, not just fences
- Design systems that don't burn us out

### FAIR SHARE

Also known as returning the surplus.

- Sharing seeds or surplus harvest
- Giving compost back to the soil
- Leaving room for wildlife and future generations
