**3 Steps To Boost Your
Child's**

**MATH
GRADES
IN
MIDDLE
SCHOOL**

Once your child learns these 3 steps Their **CONFIDENCE** in **MATH** will **SKY-ROCKET!**

Dear Parent,

What you are about to discover has come from 11 years of experience tutoring/teaching math across a variety of grade levels... I am going to share with you the 3 keys to help your child Boost Their Math Grades In Middle School that has already worked for hundreds of students I have had the pleasure of teaching.

You see we live in a 'new world' where our students need more than just going to school and their classroom teacher in order to thrive in education.

The Covid-19 pandemic created a learning gap that we are still playing catch-up on. As a result, more students are falling further and further behind because all of the burdens have been placed on their schools and teacher to bring millions of students up to speed.

Talk about mission impossible!

But yet with the world evolving and future jobs and careers becoming more competitive than ever.

The education of our children matters! Actually, their whole life depends on it.

This is why it's never been more important to set them up for success than ever before.

Did you know that a student who graduates college is 2-3 times more likely to be employed in the future than a student that doesn't?

So my goal with this guide is to share with you what I've seen to be the 3 factors that have the biggest impact on students to help them Boost Their Math Grades In Middle School.

And if you are wondering why is Math so important.

Here's why...

Students have a better chance of securing a top university and career!!

But First.... Why Should You Listen To ME?

My name is Antalesha, I am a Math Tutor.

I have been teaching for the past 11 years.

During that time I have had the pleasure of working with hundreds of students.

So I want you to know you are in safe hands!

Here's why I decided to get into teaching...

Reason #1 - To help all students get access to a quality Math learning experience.

Reason #2 - I want to help students love Math.

Reason #3 - I started tutoring to make an impact through teaching. Through Math tutoring, I can reach thousands of students to help build their Math confidence.

Now over the years, I started to notice a trend...

The students I taught that focused on 3 key things always managed to do better than those students who didn't focus on these 3 key areas.

So I started to focus on these methods consistently with all of the students I've worked with and the results were incredible...

Here are some examples...

Student #1 - Mike went from 3rd-grade Math level to 4th-grade level in just 12 weeks.

Student #2 - Mark improved their standardized test scores from the previous school year.

Student #3 - Parker, who struggled in Math from 3rd to 4th Grades, started to love learning in her 5th to 6th grades

And now my mission is to help more students by sharing these 3 steps through getting this guide into the hands of more parents who want the best for their children like you... So let's get started!

Here's Some Comments From Parents

When the school year began I was concerned about the amount of work Derrick had to complete each night. I know that you were working hard to ensure that they were on level because they had a lot of turnover with their math teacher in the 5th grade. I enjoyed watching him complete the work independently and his confidence improved as he moved into 6th grade content. Thank you!! I know that was a lot of your work on your end! The videos, guide book and access to iready were very helpful.

My child Parker has been at LFC since kindergarten and he has struggle with math in third and fourth grade. He began to show progress in fifth but things change in sixth. He is much happier about how he is learning and appreciate the videos Ms. Deruisa prepares. While, I think it's a lot my child is growing growth and talks about math on a positive manner. Therefore, I will be supporting all of his learning methods in every subject. Thank you for all your hard work.

My child  was able to improve in dividing and multiplying fractions. Mrs. Deruisa's Saturday math camp helped and made improvements in  work. Now she feels better about her math work.

On my math test, I would earn B's and C's on a math test. Mrs. Deruisa tutoring sessions helped me find the simple mistakes I was making. I gained more confidence in my answers in math.

My child said math was easy for her. A lot of students loves your teaching style and would love for u to teach 8 grade....

ALL FROM STUDENTS AND
PARENTS USING MY
MATH THE RIGHT WAY METHOD

THE LEARNING TRIFECTA

STEP 1

IMPLEMENTING THE RIGHT STRATEGY

Implementing The Right Strategy

Most students fail when it comes to doing well in Math not because they aren't capable but because they are simply given the wrong strategy to succeed!

Which is kind of frustrating because a sports team that prepares for their next competitive fixture with the wrong strategy isn't going to succeed.

So how do you know your child has the wrong strategy to help them Boost their Math Grades in Middle School?

Simple... Do any of these sound familiar?

- **Your child doesn't understand Math because the teacher didn't explain it at a level they can comprehend.**
- **Your child struggles with multiplication, and this struggle continues to hinder their progress.**
- **Your child lacks self-belief, causing them to avoid Math altogether. With each passing year, Math has become increasingly challenging for them.**

Unfortunately, until a student has a change of approach these problems will continue to exist and as a result, it's why so many students fail to achieve good grades in Math which means that they miss out on the opportunity to go and gain top grades in Math.

That's why I started to change my approach and strategy as a teacher and developed **The Right Way Math Method** and once I started working with my students this way the results have been incredible.

Here's what your child needs to focus on:

- 1.) Foundations:** Build a solid math foundation by identifying your child's strengths and weaknesses in Numbers Operations, Algebraic Thinking, and Algebra.
- 2.) Skill Building:** Utilize the survey diagnostic results to enhance your child's weaknesses, leveraging their strengths. This approach fosters math confidence and cultivates a genuine interest in the subject.
- 3.) Retention:** Achieve learning goals by reinforcing math skills after each session, effectively bridging learning gaps and establishing a strong foundation for future levels of Math.
- 4.) Repetition:** Assess your child's Math skills through regular exams to ensure preparedness for future tests and instill the confidence to perform well under pressure.

These 4 things are fundamental in helping your child boost their Math grades in middle school.

Just like a boxer preparing for a world championship fight...

When they prepare with the right strategy their chances of success increase dramatically.

It's time to give your child the strategy they need to get the grades they deserve.

STEP 2

BUILDING SUCCESSFUL HABITS

Building Successful Habits

What's the difference between students who improve their grades in Math and go on to be at the top of their class, versus the students who miss out and find Math more difficult as a result?

It's their willingness to work that extra bit harder or study that little more even when they don't want to because they understand its importance - They are 'wired' differently.

Just like the top professional athletes on the planet, they train harder than all the other athletes.

Which leaves the question? How can my child develop better habits?

Students don't develop these winning habits at school because many students have been conditioned to see school as boring or difficult, which means there is a negative association to wanting to continue learning outside of school - You don't do more of something you don't enjoy!

But if most students know that the more they study and invest in their education the better results they will get - Why don't they do it?

Simple - It's not important enough and therefore additional study doesn't become a habit.

Take this for an example - Why do we brush our teeth multiple times daily?

Is it because we enjoy brushing our teeth? No, it's because we realize how important it is and there are consequences for not doing it.

So we develop a habit and a routine to brush our teeth that happens whether we feel like it or not.

The key to helping students boost their math grades is to re-wire their current study habits so that they naturally do all the things they know they should be doing and everything becomes easier.

If it's easier, they start to enjoy it more because they're naturally more focused and become good.

Here's how you can help your child do this:

- 1) Invest in your child's education outside of school so that there is accountability to help them develop better habits and a better routine that enhances their learning.
- 2) Learning needs to be fun so that your child doesn't see doing the additional study as 'boring'.
- 3) Goal setting to build a mindset for success by aligning your child with the importance of education and its benefits.

STEP 3

THE WINNING ENVIRONMENT

The Winning Environment

This is the most important part of all...

It's what makes the 'learning trifecta' function... It's what helps your child build successful habits that ensure they consistently follow the right strategy consistently enough to succeed.

If you want your child to excel in math, achieve the top position in their class, and secure a place at a leading university in the country.

Where they learn and whom they learn with matters!

Have you ever been worried that there are other students at school that may be a bad influence on your child and stop them from reaching their potential?

This is all too common - Because their environment (whom they are associated with) dictates their habits, and we already know how important building the right habits are!

At school students don't have a choice - They have to go whether they like it or not.

Which means there are some students who want to be there and learn and others who don't.

Imagine this... If you were to climb to the top of Mount Everest by yourself or with a group of unmotivated people would you be likely to make it to the top?

Or would you be better off with a leader and other people who were highly motivated and wanted to get to the top of the mountain?

Students need to be around other students who want to achieve top results and grades.

So that they feel motivated to do better, study harder, and develop the belief that they are capable of achieving top grades in their class.

What this does is that it provides an unlimited boost of motivation for students. Here's how you can help your child do this:

- 1) Help your child understand the importance of winning environments and being around like-minded students.
- 2) Access education outside of school for your child so that they can upgrade their environment.
- 3) Find small group-focused learning with students who also want to boost their math grades.

NEXT STEPS

A BIG THANKS for taking the time to read this guide - I know how frustrating/upsetting it can be watching your child struggle with math.

But the fact that you are here reading this guide says a lot about you.

You are ready to do something about it. And for that I want to reward you.

Whilst this guide will definitely help. It isn't going to be the 'magic bullet' to help your child boost their math grades in middle school.

So here's something that might...

Each week I open up time to speak with 10 parents and create what I like to call a 'Student Success Session'.

It's a completely personalized plan to help your child boost their math grades in middle school.

And you're probably reading this guide because you have an upcoming student success session or you are thinking of scheduling one.

In the session, I'll even be able to suggest some options where I can perhaps help your child excel in their studies with **The Right Way Math Method**.

After we create this personalized plan together, you have the option to receive my assistance in implementing it or utilize it independently. If you are ready to support your child and provide them with:

- **Access to a high-quality math learning experience,**
- **The opportunity to make significant progress of 1-2 grades in math, and**
- **The ability to gain confidence in math and develop a genuine love for learning,**

I look forward to speaking with you soon so we can get your child the help they need and deserve.

Antalesha Deruisa

PS - If you haven't booked in to speak with me yet... You can do so below by tapping the button and it will take you directly to my calendar.

Want my help with this?
