**DECEMBER 2023** 

## **Should your business follow** Google's security lead?

Google has introduced a new security strategy – but is it right for your business?

It has put some employees on a cyber diet, restricting their internet access to limit potential threats.

On the surface, it sounds like a smart move. Google's approach is like building a taller fence around your house to keep out burglars.

By reducing internet connectivity, they're effectively shrinking their digital footprint and making it harder for cyber criminals to find a way in.

But is it foolproof?

Well, not exactly.

While this strategy does limit external threats, it doesn't entirely eliminate the risk.

Think of it this way: you've built a towering wall around your house, but your teenager leaves the back gate open. Similarly, internal systems might remain connected to other devices that can access the internet, providing a potential entry point for cyber threats.

In other words, you can't just focus on keeping things out.

Yes, there are very real threats from external hackers using all sorts of techniques like phishing, zero-day attacks, and malware. But the security industry often overlooks significant threats from within the perimeter.

Research shows that insider threats account for 62% of all security breaches. These insiders – disgruntled employees, careless staff, or malicious actors – often have legitimate access rights, intimate knowledge of the system, and can bypass traditional security checks. It's like having a burglar who knows where you hide your spare key.

So, what's the takeaway?

While Google's strategy has its merits, it's not a one-size-fits-all solution. Just as you wouldn't wear shoes that are too big, your business needs a cyber security strategy tailored to fit its unique requirements. A robust cyber security strategy should focus on both external and internal threats and have measures in place to mitigate risks from all angles.

Our advice? Instead of simply following in Google's footsteps, consider your own business's needs and vulnerabilities. And of course, if you need help with that, get in touch.

#### **INTRODUCING...**

## MISSION IMPACT TECHNOLOGIES

A new branch of the Kerkhoff Technologies family.

We're on a mission to make technology work for nonprofits. We serve nonprofit organizations in beautiful British Columbia, Canada.

Whether you're a small local charity or a larger nonprofit, we're here to simplify the tech side of things so you can concentrate on what matters most—your mission.

Visit our website: missionimpact.tech

1

In 2021, an Apple II computer manual signed by Steve Jobs **sold for almost \$800,000 at auction** 

2

File hosting service Dropbox was founded by MIT students Drew Houston and Arash Ferdowsi in 2007. It's now thought to be worth over \$9 billion

### Techn@logy update

#### It's now easier to grab video stills from YouTube

If you use Chrome, Edge, or a similar browser called Arc, there's a new tool that will help you grab high quality stills from videos.

Why might you need this? To highlight key points from presentations, training videos, or even for making note taking simpler.

Just right click on the paused video, and select "Copy video frame".

3

The name Wi-Fi was coined by brand-consulting firm Interbrand when asked to come up with a name that was "a little catchier than 'IEEE 802.11b Direct Sequence'." The term Wi-Fi was ultimately chosen as a pun on hi-fi

## **TEAM SPOTLIGHT**

DANIEL

What is your role? AVP Service. My key responsibilities are the management of client agreements, responding to client questions and concerns, and oversight of the service team.

What are your hobbies? I am a giant Sci-Fi nerd, so not surprisingly I enjoy playing video games and tabletop roleplaying games. Currently I am wasting copious amounts of time with Bethesda's Starfield.

I also enjoy archery, fencing and gardening. I am currently growing several species of fruit tree from seed as an experiment.

If you could travel anywhere in the world, where would you go and why?

The Galapagos Islands. I have been fascinated with seeing them since reading "The Origin of the Species."

What's your top tech tip? First take a deep breath, no problem can be solved in a panic.

### **INSPIRATIONAL QUOTE** OF THE MONTH

"You don't need to have a 100-person company to develop that idea."

Larry Page, co-founder of Google

## 

## **DECEMBER'S FUN TECH QUIZ - LOSER WEARS** THE SANTA HAT

- 1. Often pronounced "gooey", GVI is short for what well-known three-word tech term?
- 2. What does (APT(HA stand for?
- 3. What popular operating system, launched in 1991, also has its
- own mascot, Tux the penguin? 4. Which movie was not just the final Pixar movie to be released
- on VHS but also the first to be released on Blu-ray?
- 5. Which famous tech giant had the company motto "THINK" for over 40 years?

The answers are below.

1. Graphical User Interface. 2. Completely Automatic Public Turing Test to Tell Computers and Humans Apart.. 3. Linux

#### It's time to turn the tide on phishing attacks

Phishing attacks have reached record highs this year. Worryingly, in the third quarter of this year alone, phishing attacks skyrocketed by a staggering 173%, compared to the previous three months.

And malware? It's not far behind, with a 110% increase over the same period.

Let's put this into perspective. Imagine you're on a quiet beach, enjoying the sun and the surf. Suddenly, the tide starts to rise rapidly. Before you know it, your picnic basket is floating away, and you're knee-deep in water. That's what's happening in the cyber world right now.

According to a report, the 'phisherfolk' group were most active in August, casting out more than 207.3 million phishing emails. That's nearly double the amount in July. September wasn't much better, with 172.6 million phishing emails.

But who are these cyber criminals targeting? Old favorites Facebook and Microsoft continue to top the charts, with Facebook accounting for more phishing URLs than the next seven most spoofed brands combined.

So, what's the bottom line here?

Your business could be next.

**DID YOU KNOW?** 

Phishing attacks are like a rising tide, and if you're not careful, they can quickly sink your business. They target everyone - from tech giants to financial institutions, and even government agencies. The question is - are you prepared?

Take a moment to consider the authenticity of emails. Are they from a trusted source? Do they contain suspicious links? Are they asking for sensitive information?

Make sure your employees are aware of the risks. Encourage them to think twice before clicking on a link or downloading an attachment. After all, a moment's hesitation could save your business from a devastating cyber attack.

And don't forget about integrated email security solutions and phishing awareness training. They could be the thing that best help you prevent an attack.

So, as the tide of phishing attacks continues to rise, remember – it's better to be safe than sorry. If you need any further help or advice, get in touch.

# NEW TO MICROSOFT

365

Outlook could soon be writing your emails for you

Thanks to Copilot (Microsoft's Al companion), you'll be able to draft more concise, professional emails in Outlook, with suggested edits for clarity and inclusive language.

And if there's a long email thread you need to respond to, Copilot can even summarize it and draft suggested replies.

#### not to download third party apps?

New research has found that an Android app is actually a trojan (a type of malware) that can record your video and audio calls. The SpyNote banking trojan is typically delivered by a phishing SMS, and once installed, it's very hard to get rid of.

How do you avoid it?

Simple. Only download apps from official app stores – never via third parties.
