# ABOUT US

At Pegasus Steel, we pride ourselves on being a reliable, 24-hour steel processing service centre, handling over 1,250 tons of steel each month. As an owner-managed business led by Alex Russell, we have cultivated a dedicated team of over 200 skilled professionals, all focused on delivering exceptional, high-quality results. We are proud to be ISO 9001:2015 certified, ensuring that we maintain the highest standards in our operations. Additionally we hold a Level 2 BBEE certification underscoring our commitment to promoting sustainable, ethical practices in the industry.

Founded in 1995, our 14 000m<sup>2</sup> facility is equipped with the latest, cutting-edge technology to meet a wide range of steel processing needs. At the heart of our operations is laser cutting, one of the most precise and efficient methods for cutting a variety of materials. We offer advanced laser cutting services, along with high-definition plasma cutting, oxyfuel profile cutting, saw cutting, rolling, and bending. Additionally, our HAAS Gantry Router machines provides specialized drilling, milling, and machining services, tailored to customer specifications.

Among the many services offered by Pegasus Steel, laser cutting stands as a core specialty. Utilizing cutting-edge laser cutting technology, Pegasus Steel ensures precision and speed across a range of materials. Our laser cutting systems are capable of producing high-quality, intricate parts with exceptional accuracy, making it ideal for both complex components and high-volume orders. In addition to laser cutting, Pegasus Steel also provides machine routing, heavy and light CNC bending, high-definition plasma cutting, rolling, and saw cutting, allowing the company to meet a broad array of needs across various industries such as mining, construction, power generation, and transportation.

In line with our commitment to providing the best service across South Africa, we're excited to announce the opening of our new Cape Town branch. This new location will expand our services to meet the growing needs of customers in the Western Cape, offering the same high-quality processing services, including laser cutting. Our Cape Town branch also brings specialized services such as tube laser cutting and pipe bending, further enhancing our capabilities to handle even more specialized steel fabrication tasks.

We supply steel materials both locally and internationally, including carbon steel, stainless steel, aluminium, and wear plate materials for high-performance applications. With our sophisticated, precision-calibrated equipment, including our laser cutting systems, we can efficiently handle projects of all sizes—whether large-scale industrial work or smaller, custom orders. Our laser cutting technology ensures that we can reproduce virtually any shape or profile with remarkable accuracy and speed, making it ideal for both intricate designs and high-volume orders.

At Pegasus Steel, we understand that selecting the right materials for each application is critical. Our technical experts are always on hand to offer advice and provide innovative, cost-effective solutions. Thanks to our computerized stock system, we ensure fast responses to orders, while our large fleet guarantees prompt delivery across South Africa.

Our dedication to fast, high-quality service has made us the trusted partner of choice for steel suppliers and large fabricators. With lead times as short as 24 hours for urgent contracts, we have earned a loyal customer base throughout Gauteng, South Africa, and the wider SADC region.

What truly sets us apart is our friendly, customer-focused approach. We listen closely to our clients' needs and deliver effective, tailored solutions within budget. With three decades of experience and a diverse range of equipment, including laser cutting systems, we help our customers save time, labor, and costs while ensuring top-notch results.

# WHY PEGASUS STEEL?

Pegasus Steel is a leading supplier of carbon steels, stainless steels, and aluminum, offering a wide range of products to meet diverse customer requirements. Key features of the company include:

- A fully computerized stock system for instant response to customer needs
- Skilled and experienced staff ensuring accurate fulfillment of client requirements.
- A large, well-organized fleet for prompt delivery across Southern Africa
- Reliable "just-in-time" material supply for all contract sizes.
- Specialization in supporting the African engineering sector with tailored service

**Pegasus Steel** aims to deliver the highest standards of quality and service, maintaining customer satisfaction as a top priority.

## VISION

Our goal is to be the leader in South Africa's steel industry, known for offering exceptional products and services. We aim to be recognized not just for our steel expertise, but for fostering an environment where quality, innovation, and human potential are at the core of everything we do.

## MISSION

We pursue our vision by continuously advancing our skills through strategic recruitment, professional development, and a shared commitment between our team and clients. By prioritizing collaboration, we ensure that every project is a partnership, leading to mutual growth and success.

## VALUES

We uphold a strong sense of responsibility to our clients, our team, and the environment. Through collaboration, we build lasting relationships that drive innovation, and with integrity, we deliver on our promises with transparency and respect.

# OUR SERVICES

## Gauteng

### LASER CUTTING

#### BYSTRONIC & DNE FIBER LASER CUTTING

- High-speed cutting for unbeatable productivity
- Maximum flexibility for large series and spontaneous customer orders.
- 8000 x 2500 bed size
- 15kw Laser Power
- Cut up to 50mm thick carbon and stainless steel

#### TRUMPF LASER CUTTING

- Two 5kw Trumpf Laser
  - 6m x 2m cutting beds
- One Trumatic 6kw Trumpf 5030 Laser cutting system
  - 3m x 1.5m cutting bed
- One state of the art Trumpf 5040 8kw TruLaser fiber laser cutting system
  - 4m x 2m cutting bed

### HI-DEF PLASMA CUTTING

- Three Messer Omni Mat high-definition plasma cutters
- 28m x 5m cutting bed
- Cut up to 35mm carbon steel

### OXY-FUEL PROFILE CUTTING

- Two CNC controlled Messer Profile Machines
- 10m x 5m cutting beds
- Cut up to 300mm carbon steel

# CNC BENDING

- 500Ton 6.1m LVD CNC Press Brake
  - Bends up 12mm over 6m
- Two 135 ton LVD CNC Press Brakes
- One TruBend 3.120 - 120Ton Press Brake
- One 200Ton LVD CNC 4m Press Brake
- One 600Ton Bystronic Press Brake
  - Bends up to 16mm over 6m
- One 300Ton Bystronic Press Brake
  - Bends up to 4m long

# ROLLING

- Maximum plate capacity of 30mm thick over 3m long on mild steel plate
- Inside diameters down to 180mm over 1.2m for thin gauge materials

# OTHER SERVICES

- Machining
- Drilling & Tapping
- Saw Cutting
- Guillotining
- Chamfering and Bevelling
- On-Site Drafting Services
- Fabrication - AWS D1.1 & ASME 9 Certified

# Cape Town

## LASER CUTTING

### DNE FIBER LASER

- High-speed cutting for unbeatable productivity
- Maximum flexibility for large series and spontaneous customer orders.
- 8000 x 2500 bed size
- 15kw Laser Power
- Cut up to 30mm carbon and stainless steel

### TRUMPF LASER CUTTING

- One 5kw Trumatic Trumph Laser
- 6m x 2m cutting beds

## TUBE LASER CUTTING

- HSG-TX7026-7 Series Tube Fiber Laser
- HSG X-10000 Pipe Cut Expert
- 3+1 Twin Chuck Clamping
- Follow up and down unloading
- Semi-Auto Tube Auto Loading Sytems

## Rolling

- Maximum plate capacity of 12mm over 3m long on mild steel plate

## TUBE AND PIPE ROLLING

- From 6mm OD up to 63mm OD
- Solid round bar up to 50mm dia SS

## OTHER SERVICES

- Tube and Pipe Mandrel
- Various other tube and pipe bending machines for bending and manipulation
- Guillotining

# CONTACT DETAILS

Managing Director - Alex Russell

Sales Manager - Scott Mc Diarmid - GAUTENG

General Manager - Koorts Liebenberg - CAPE TOWN

Accounts Manager - Lorraine Jefferies

Group SHERQ Manager - Jacques Van Wyk

## PHYSICAL ADDRESS - GAUTENG
