bypass

hi/lo
rate

depth: this blends the effected signal in with the bypass signal.

rate: this controls the speed of the reverse sawtooth lfo.

hi/lo tone: this toggle flips between a thin voice and a full voice.

hi/lo rate: this footswitch varies the rate's range between slow & fast.

rate exp: can be used with passive & active expression controllers.

an internal control can be adjusted to personal taste:

input gain

adjusts the level of the incoming signal.
