

yesterday
effects®

altogether

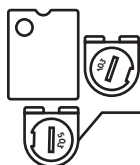

boost: designed to push an amp into natural break up. dialed right volume increases and break up begins.

tone: adjusts the effect's overall color.

decay: adjusts the linear duration of time it takes for the reverb to dampen and then fade out.

two internal
controls can be
adjusted to
personal taste:

dry signal volume: adjusts input signal volume before it's blended with reverb.

reverb blend: adjusts balance between dry signal and reverberated signal.

wet/dry toggle: runs a dry signal in parallel with a wet (effected) signal.
