

Winter

HOME MAINTENANCE CHECKLIST

PROTECT YOUR AIR-CONDITIONING UNIT

Shield it from weather with purpose-made covers.

MAINTAIN REFRIGERATOR & FREEZER COILS

Use a coil brush to remove dust buildup, ensuring better efficiency and longevity. Remember to unplug the fridge before cleaning and empty and clean drip trays as well.

CHECK ROOF, GUTTERS, AND DOWNSPOUTS POST-STORMS

Winter can be tough on your home. Call a professional if you notice any damage.

It's also wise to inspect your basement for leaks once the ground thaws.

MONITOR YOUR PIPES

Beyond wrapping pipes in fall, prevent freezing by letting faucets drip on cold nights and maintaining a minimum thermostat setting of 55 degrees when away from home.
