SECRETS OF THE MONEY MASTERS

Secrets of the Money Masters

America's Invisible Rulers

Central Banks: A Simple Explanation

A long time ago, countries needed help handling their money. So, they made something called central banks. These banks weren't like regular banks where people keep their savings. Instead, they were special groups run by private people who helped governments control money, credit, and taxes.

Central banks started in Europe. Kings liked them because they made it easier to pay for wars and collect money without doing all the work themselves. Once kings began using central banks, other leaders wanted them too.

How Central Banks Reached America

People in early America didn't want a central bank. They didn't trust it. But some groups connected to Britain eventually created a national bank here. The first two American central banks didn't last long, but the idea kept coming back.

The Federal Reserve

In 1913, a new group of private banks formed something called the Federal Reserve, which still exists today. It helps the government:

- create money
- control interest rates
- manage the country's banking system

The Federal Reserve has a lot of power over how money works in America.

Taxes and the Federal Reserve

The government also created tax agencies like the IRS to collect money from people. These taxes were not normal taxes, but part of special agreements connected to federal citizenship. Congress let the Federal Reserve handle too much power, including taxes. Central banks took too much control, people were taxed in unfair ways, courts and agencies helped enforce rules that weren't always right, and Americans were not told the truth about how money and taxes really work. The government should investigate, stop any wrongdoing, and make sure banks and agencies follow the law.
