Facebook Pages missing in Page Selector Dropdown during integration. : CITK

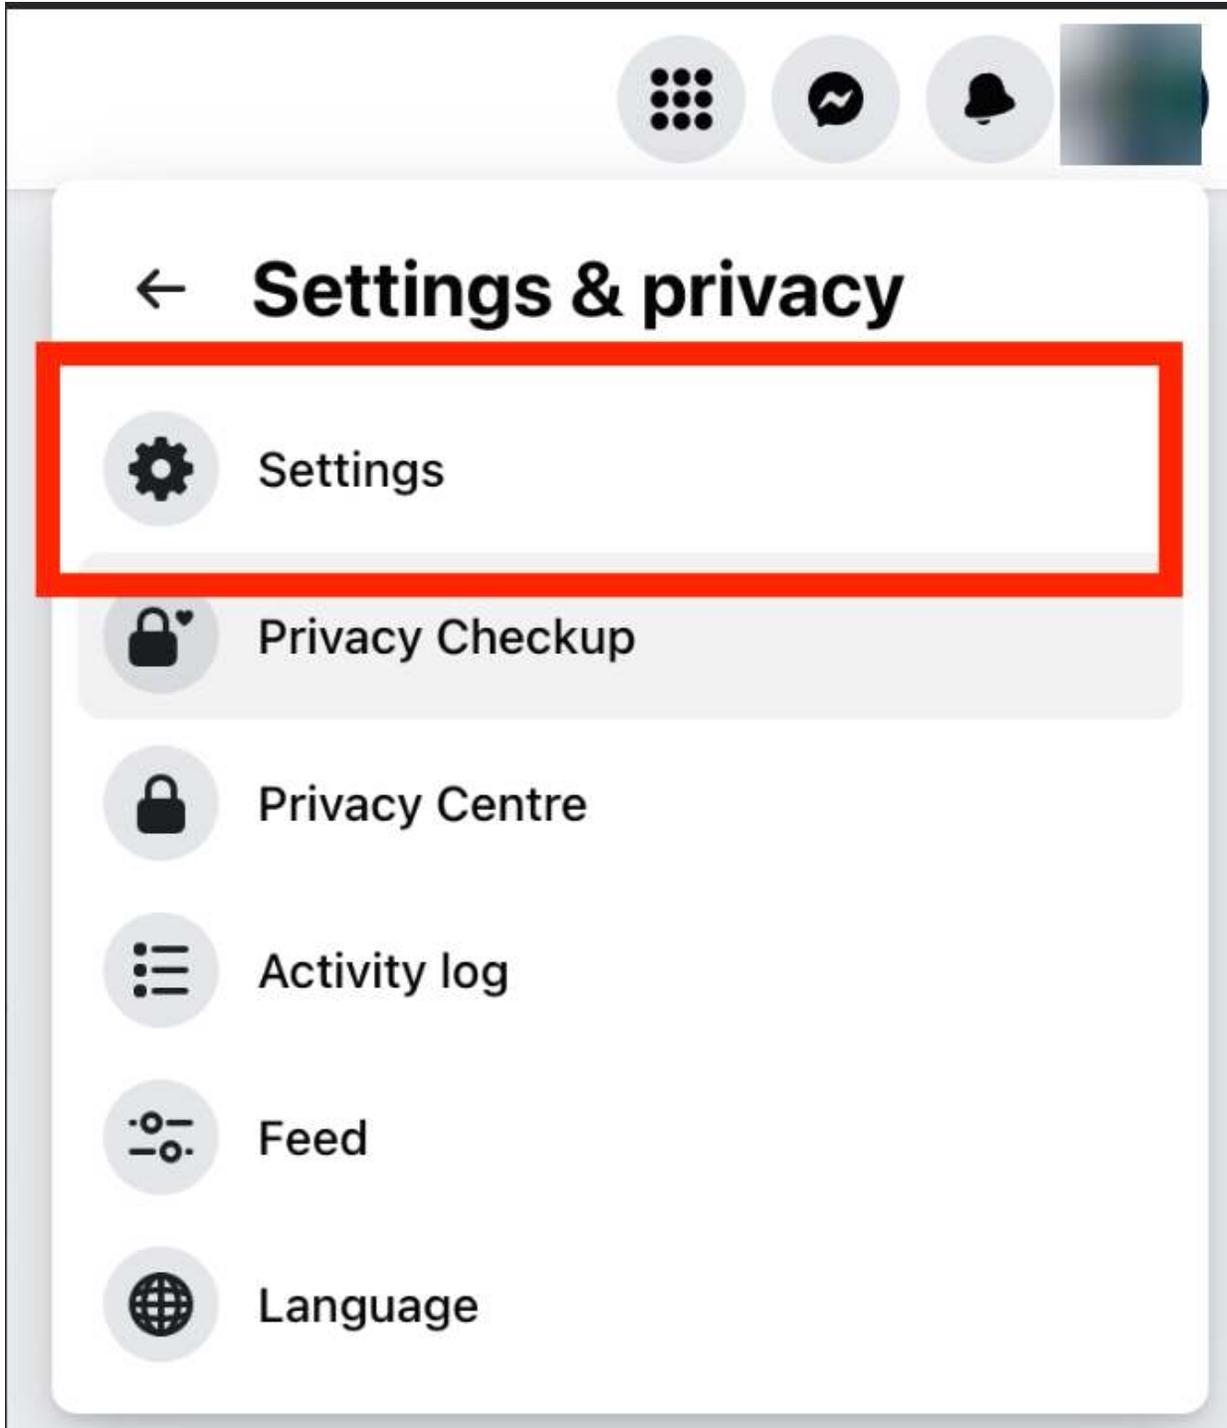

The issue with Facebook Business Page(s) not showing up when you integrate FB with your CRM account is relatively common, and this article aims to help you troubleshoot that.

## How to fix the issue with FB pages not showing up in the Page Selector dropdown?

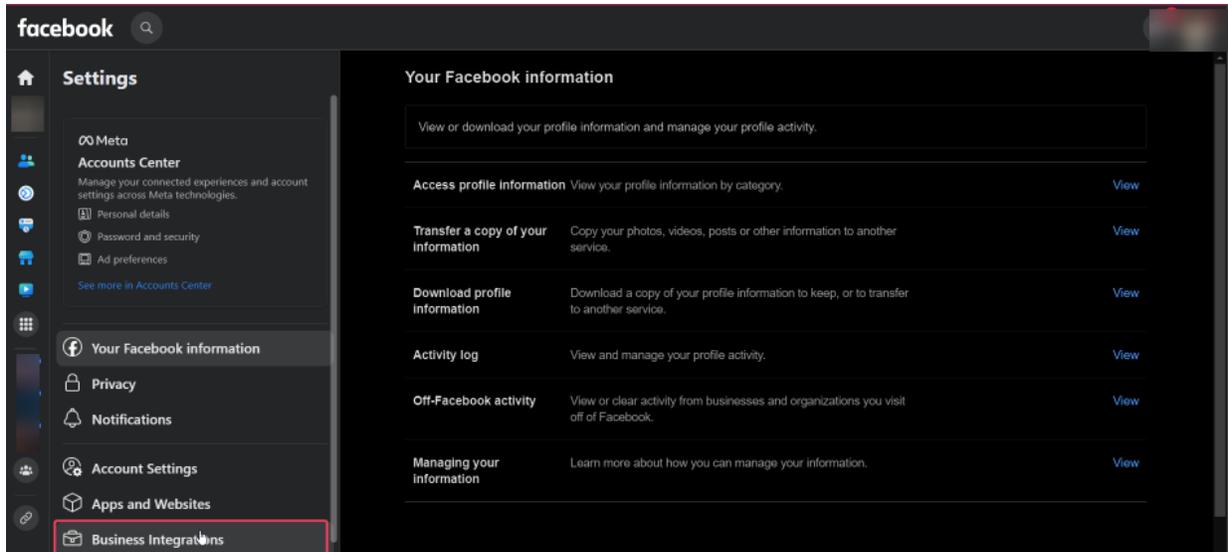

You will start by going to your [Facebook account](#). Followed by that, you will head over to the top right avatar icon with your profile picture in it and then head to **Settings and Privacy**:

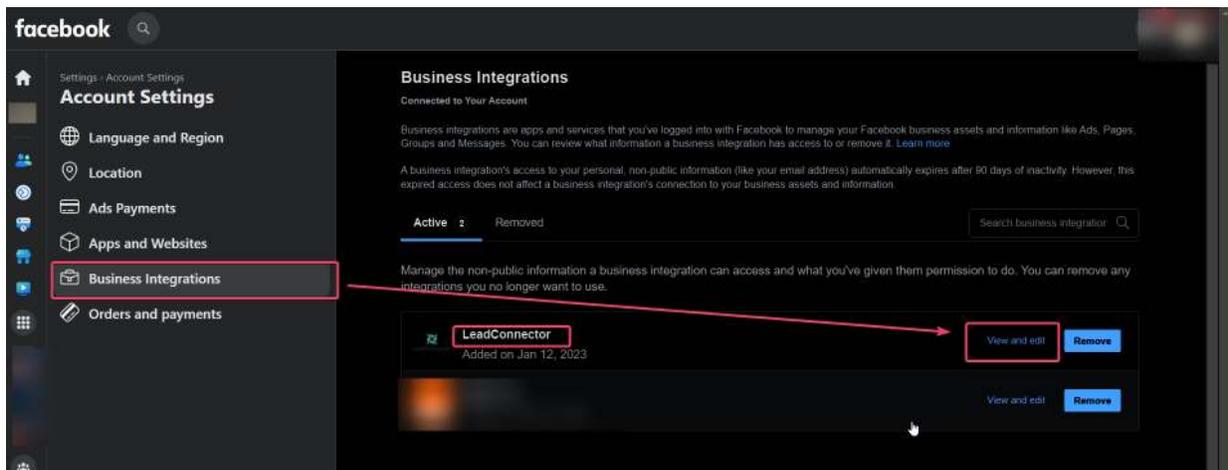

Inside **Settings and Privacy**, click on **Settings**.

You can follow that up by going to **Business Integrations** on the left:

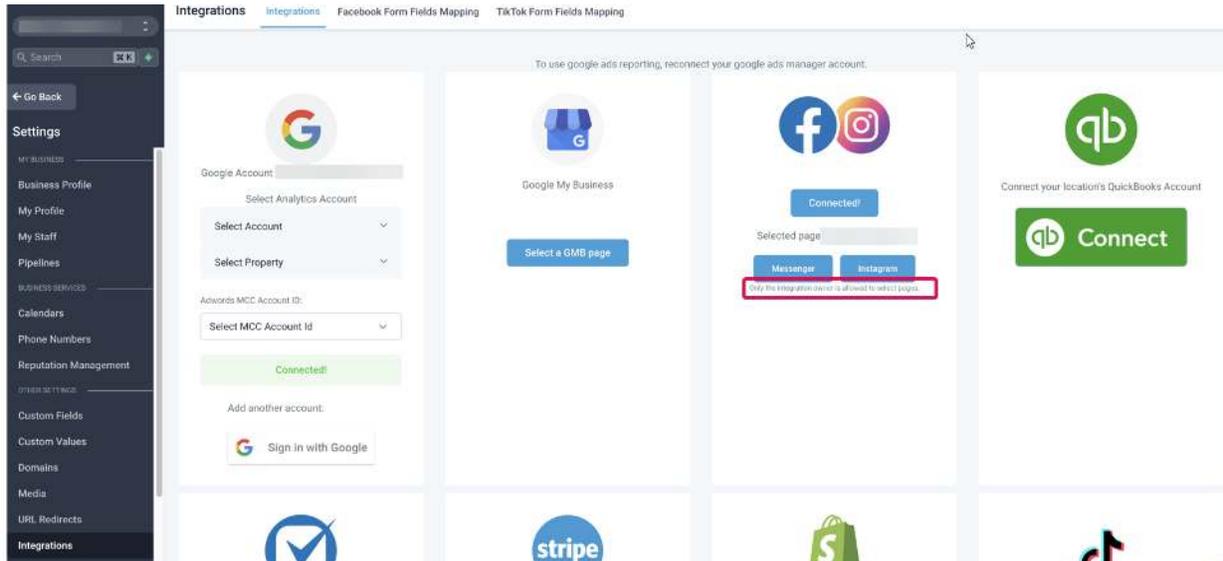

Once there, please click on **view and edit** in front of the **LeadConnector** app:

Please make sure that all the toggles are turned on; scroll down all the way and toggle everything on:

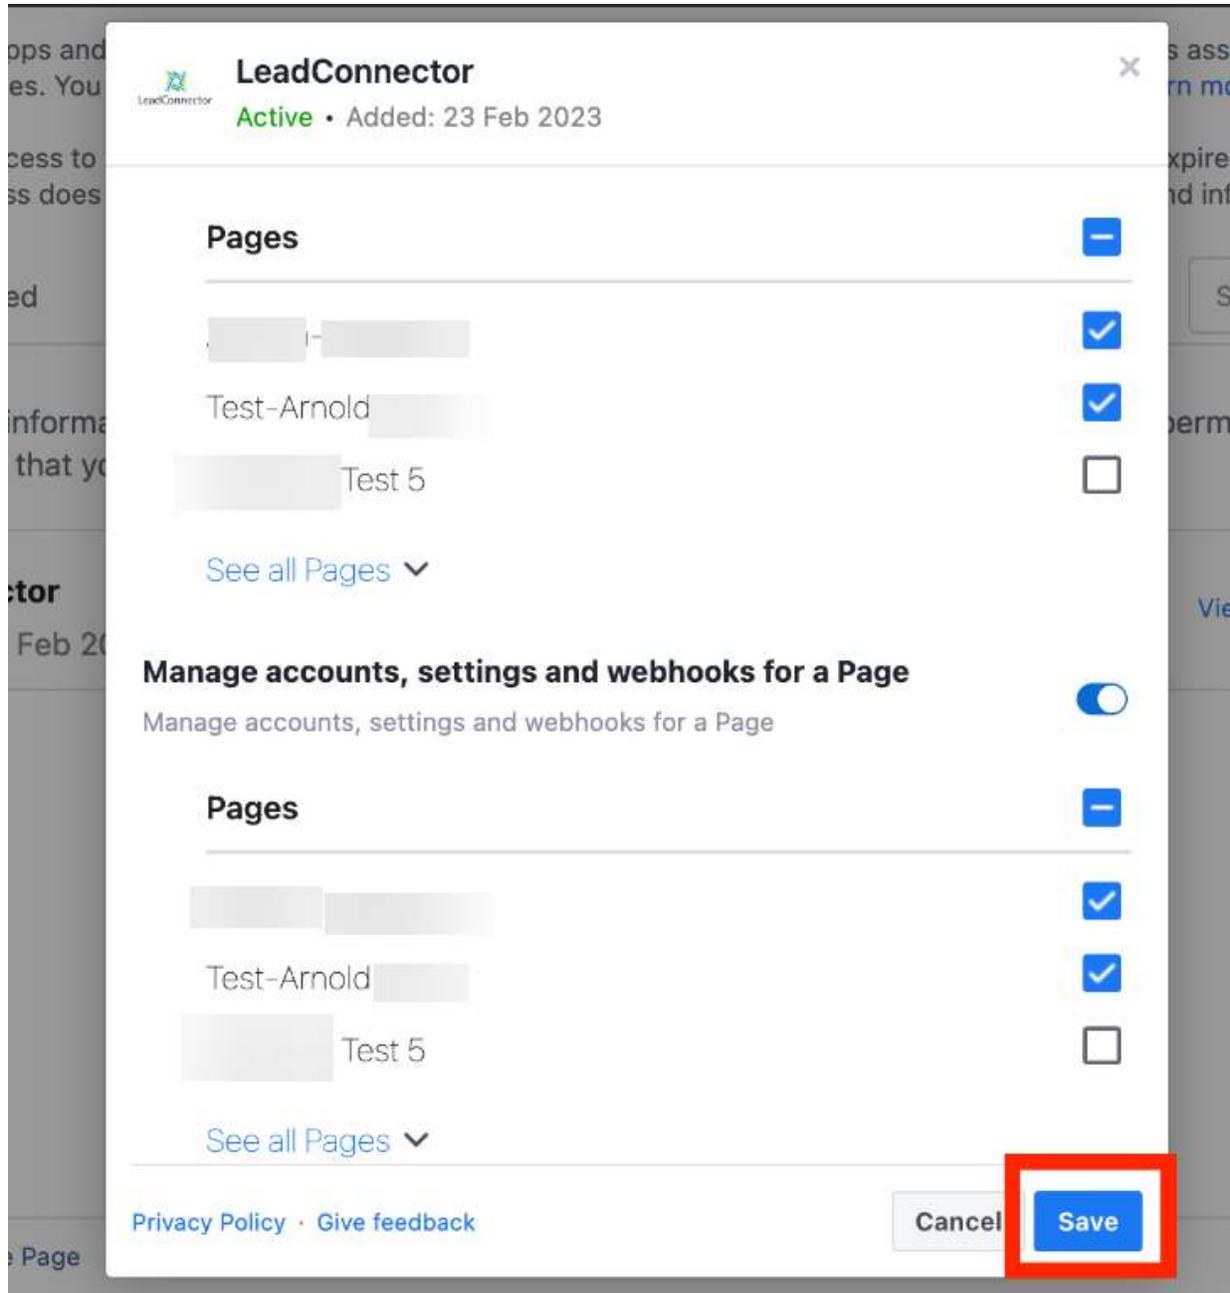

## Please Note:

Only the User that integrated the FB page will be able to see that page in the dropdown of pages. They need to be the admin of that FB page

When a list of pages shows up with checkboxes in front of them, mark all those pages that are relevant to your Agency's sub-accounts:

Once done, please click on **Save**.

## Please Note:

If there are pages already marked over here, Please **DO NOT** unmark them, as this will break off their integration with your agency's sub account
