

Are your lungs healthy?

Probably not. Only one in four people with a chronic respiratory disease are aware of their condition. Health Mirror is a revolutionary health analysis solution powered by Artificial Intelligence (AI) that uses saliva and breath samples to detect respiratory diseases such as asthma, COPD (Chronic Obstructive Pulmonary Disease), and other conditions in early stages like lung cancer. Through a non-invasive approach based on metabolomics (analysis of chemical signatures in saliva and breath analysis), Health Mirror enables rapid and accurate patient classification, facilitating personalized interventions that improve clinical outcomes and reduce overall healthcare costs by 50%.

PROJECT SUMMARY

Screening for respiratory diseases using digitalization and biofluid data analysis powered by Artificial Intelligence.

A technological platform that allows the detection of multiple diseases.

B2B model aimed at healthcare organizations, insurers, and laboratories. Recurring additional revenue through subscriptions and strategic partnerships with pharmaceutical and tobacco companies.

INVESTMENT

- **\$1M USD** for FDA and COFEPRIS regulatory compliance and expansion into new disease areas.
- Revenue projection of **\$1.6 M USD** by the sixth year of operation, with a gross margin of **87%**. (Only in Mexico).

MARKET

- 1 260 million people** suffer from asthma worldwide, 3 million have COPD.
- 2 8.5 million people** in Mexico suffer from asthma and COPD. 70% are unaware of their disease status.
- 3 First stage SAM: 2.55M** in urban areas of Mexico, with a capture target of 4% in 5 years.

TRACTION

Signed letter of intent with an occupational health laboratory in Monterrey, Mexico. Clinical trials in progress with INER and INCAN. Participation with a pharmaceutical company for clinical trials.

TEAM

Strong technological development team including SNI researchers, data analysts, AI specialists, and clinicians.
