SMALL DECORATIVE BARK

Small Bark is derived from fir bark and contains very little wood fiber. It is screened for both minimum and maximum particle size. Small Bark is the most popular and is used in areas where a more formal, uniform texture is desired. It's easy to spread, easy to rake clean and persists longer than shredded barks. Small Bark makes an excellent mulch to suppress weed growth and help conserve soil moisture.

SPECIFICATION GUIDELINES

Small Decorative Bark shall be derived from the bark of Douglas Fir, Red Fir, or White Fir and shall be granular in structure with 100% falling in the range of ½ to 1 inch particle size.

Suggested minimum application rate is 6 cubic yards per 1,000 square feet to provide a 2 inch layer of mulch.
