SHREDDED REDWOOD BARK

This highly fibrous mulch is a by-product in the processing of The Coast Redwood into lumber. The bark is shredded and then ground to produce a uniform textured, decorative ground cover. Shredded Redwood Bark provides a dense cover highly effective for weed control and moisture retention. Because it is non free flowing, erosion control on hillsides is excellent. Shredded Redwood Bark is less fire resistant than other mulches and is not a good choice for streetscapes or areas adjacent to pedestrian traffic.

SPECIFICATION GUIDELINES

The mulch shall be derived from 100% Coast Redwood, freshly ground to a uniform texture.

Suggested minimum application rate is 6 cubic yards per 1,000 square feet to provide coverage of approximately 2 inches.
