LARGE DECORATIVE BARK

Large Bark is derived from fir bark and contains very little wood fiber. It is screened for both minimum and maximum particle size and is very uniform looking in terms of size and texture. Large Bark is an excellent choice for use around swimming pools or windy areas since it is less apt to blow. Large Bark will persist longer than most wood or bark materials. It makes an excellent, long lasting mulch to suppress weed growth and help retain soil moisture.

SPECIFICATION GUIDELINES

Large Decorative Bark shall be derived from the bark of Douglas Fir, White Fir, or Red Fir and shall be granular and chunky in nature with all particles falling between 2 and 3 inches in diameter.

Suggested minimum application rate is 9 cubic yards per 1,000 square feet to provide a 3 inch layer of mulch.
