## **SHREDDED CEDAR BARK**

This highly fibrous mulch is a by-product in the processing of Western Red Cedar into among other things, pencils. The bark is shredded and then ground to produce a uniform textured, decorative ground cover. Particles are woody and fibrous and generally less than 3 inches. Cedar Bark provides a dense cover highly effective for weed control and moisture retention. Because it is non free flowing, erosion control on hillsides is excellent. Its fresh cedar aroma may repel insects and it lends an earthy appearance to naturalized landscape areas. Shredded Cedar Bark is less fire resistant than other mulches and may not be the best choice for streetscapes or areas adjacent to pedestrian traffic.

## **SPECIFICATION GUIDELINES**

The mulch shall be derived from 100% Western Red Cedar, freshly ground to a uniform texture.

Suggested minimum application rate is 3 cubic yards per 1,000 square feet to provide coverage of approximately 1 inch.
