WALK ON BARK

Walk on Bark is a mixture of Fir Bark nuggets and wood particles. It is considered a shredded bark but it's not as fibrous as cedar or redwood and may not be the best choice for steep slopes. Walk on Bark is most popular for landscape construction especially streetscapes and new installations. It is highly efficient for mulching purposes and will retard weed growth and help to conserve soil moisture.

SPECIFICATION GUIDELINES

Walk on Bark is derived from Douglas Fir, Red Fir or and or White Fir and shall consist of a woody bark mixture with an average particle size of 1-1/2 inches.

Suggested minimum application rate is 6 cubic yards per 1000 square feet to provide a 2 inch layer of mulch.
