Agile Software Development for SNHU Travel Project

Technologies Used: Java, Agile Scrum Framework

Led the development of a travel application using Agile and Scrum methodologies. Collaborated with cross-functional teams to deliver high-quality software through iterative sprints. Managed product backlogs, conducted sprint planning, and facilitated stand-ups for task tracking. Adapted quickly to evolving stakeholder requirements, ensuring continuous delivery of valuable software features.

Sprint Review and Retrospective

Key Skills: Agile Project Management, Scrum Framework, Stakeholder Collaboration

Organized sprint reviews and retrospectives, analyzing project progress and identifying areas for improvement. Facilitated cross-team communication, ensuring stakeholder feedback was integrated into the development cycle. This project demonstrated expertise in Agile project management, iterative development, and continuous improvement.
