Viome Methodology

Total Microbial and Human RNA are extracted, ribosomal RNA molecules are removed from total RNA, sequencing libraries are formed from the total RNA, and the libraries are sequenced on Illumina NextSeq or NovaSeq sequencers. Proprietary bioinformatics algorithms are used to perform human gene expression, taxonomic classification, and functional analysis of the sequencing data.

Method Limitation

Identification of microbes or discrimination of closely related taxa through sequencing relies on the quality of the database of sequenced and characterized microbiota. Microbes not listed or with poor quality data in the database cannot be identified accurately. Viome monitors the growth of public genomic databases and updates its own databases when there is sufficient new quality information to be worthy of incorporation.

Pathogenic microbes are not detected by the bioinformatics algorithms used in this testing. Detection of a microorganism by this test does not imply having a disease. Similarly, not detecting a microorganism by this test does not exclude the presence of a disease-causing microorganism. Further, other organisms may be present that are not detected by this test. This test is not a substitute for established methods for identifying microorganisms or their antimicrobial susceptibility profile. Results are qualitative and identify the presence or absence of identified annotated organisms.

Characterization of human gene expression through RNA sequencing is based on our ability to identify and quantify thousands of human transcripts. The test cannot detect RNA from genes that are not being transcribed or are transcribed below the limit of detection of the test. Characterization of gene expression does not detect variation or mutation in the genetic sequence and does not detect variants that may be pathogenic.

Disclaimer

Always consult with a healthcare professional before making any major lifestyle changes. This test does not diagnose any health conditions or provide medical advice. This test was developed by, and its performance characteristics determined by Viome Inc. It has not been cleared or approved by the US Food and Drug Administration. The FDA has determined that such clearance or approval is not necessary. This laboratory is registered under CLIA (50D2224932) to perform high complexity testing. Contact Viome for any further questions.
